

[Achieving net zero – a review of the evidence behind potential carbon offsetting approaches](#)

News story

Join our webinar sessions to hear more about the recently published project and our planned next steps to achieve net zero carbon emissions.

Upland peat restoration was one carbon offsetting approach reviewed in the evidence base.

The Environment Agency aims to become a [net zero carbon organisation by 2030](#). This includes reducing emissions by 45%, and using best practice carbon offsetting techniques to address remaining emissions.

To help achieve this target, we recently published an evidence base which will help shape the Environment Agency's corporate carbon offsetting strategy.

We have set up webinar sessions for users to hear more about the evidence project and how the Environment Agency plans to take this work forward. These will be targeted at specific audiences.
