

Alok Sharma heralds green cities of the future on Kenya visit

- International Development Secretary pledges new UK aid to help build green cities across Africa with quality infrastructure.
- Alok Sharma announces new UK Centre for Cities and Infrastructure which will help African governments plan, build and run environmentally friendly cities.
- Visit to Kenya comes ahead of the UK-Africa Investment Summit in London on January 20.

The International Development Secretary today (Tuesday 14 January) pledged new UK aid support to build the African cities of the future, so the continent can continue to thrive and reach its economic potential.

Alok Sharma, on a visit to Kenya, announced he would set up a UK Centre for Cities and Infrastructure, which will turbo-charge investment in fast growing cities across the developing world.

The Centre will provide British expertise to African governments and city authorities to improve the way cities are planned, built and run, including making them more environmentally-friendly. It will focus on improvements to infrastructure, including water and energy networks.

During his trip, Mr Sharma also announced an expansion of the Department for International Development's (DFID's) Cities and Infrastructure for Growth programme to Ghana, Rwanda and Sierra Leone.

The programme helps UK businesses invest in quality, resilient infrastructure, boosts access to reliable and affordable power and creates construction jobs.

International Development Secretary, Alok Sharma said during his trip to Kenya:

Our new UK aid support, announced ahead of the UK-Africa Investment Summit, will contribute to creating the African cities of the future, using British expertise to provide quality, green infrastructure across the continent.

Infrastructure is the backbone of economic growth. It helps the poorest people access basic services such as clean water and electricity, creates jobs and boosts business.

I've seen this first hand as I've travelled across Kenya and am proud to see British companies thriving here. This will benefit people and businesses across Africa, but also back at home in the UK, creating a successful future for all of us.

Mr Sharma's trip came ahead of the [UK-Africa Investment Summit](#) next Monday (20 January), which will create new lasting partnerships to deliver more investment, jobs and growth, benefitting both Africa and the UK.

African cities produce more than half of the continent's income, but too many suffer from poor connectivity and congestion which continues to hinder growth.

The continent's urban population is 472 million and set to double over the next 25 years. This growth provides an opportunity for African cities to prosper if the right infrastructure and jobs are available with UK support.

On Sunday, Mr Sharma visited Kisumu, in western Kenya, where British businesses such as drinks company Diageo and solar power provider Azuri Technologies operate.

Diageo makes beer in its modern, environmentally-friendly brewery in the city, using sorghum plants from nearby farms. This in turn boosts incomes of Kenyan farmers and helps them provide for their families.

Azuri, whose UK base is in Cambridge, provides pay-as-you go solar energy systems to off-grid homes across Africa, including in the Kisumu area. This is helping families to store food in fridges and providing light for children to do their homework.

Yesterday, The International Development Secretary opened the Securities Exchange in Nairobi. He was there for the listing of East Africa's first green bond, which DFID supported Acorn Housing to develop, by providing British expertise.

Later, Mr Sharma visited a climate-friendly student housing complex in Nairobi, which the bond is helping Acorn to build.

Yesterday evening, he met female entrepreneurs and tech start-ups in the Kenya capital, which are attracting international interest and investment.

At the event it was announced new UK company Circle Gas is investing £17m to scale up clean cooking technology, which DFID helped to develop.

Notes to editors:

- For details on the [UK-Africa Investment summit click here](#)
- The new UK Centre for Cities and Infrastructure is backed by £48 million of UK funding. Of this total funding £30 million will go to support projects in countries across Africa.
- The Cities and Infrastructure for Growth programme in Africa is to receive an extra £15million of UK aid funding for its expansion. DFID has previously announced Africa funding through the programme in Uganda, Zambia and Ethiopia. The programme also works in Asia.
- Circle Gas raised money from private investors including mobile phone company Safaricom to produce clean cooking stoves for sale across East Africa. These are cheaper than charcoal stoves and are better for the environment and customers' health. DFID provided a total of £1.2 million

of funding to support the initial development of the technology.

- DFID is already supporting emerging urban areas in Kenya, helping them draw up economic plans and improve their ability to attract investment, through the Sustainable Urban Economic Development Programme.
