

Artificial Intelligence: Commission discusses ethical and social impact with philosophical and non-confessional organisations

Today, the European Commission hosted a high-level meeting with 12 representatives from philosophical and non-confessional organisations from across Europe, as part of the regular dialogue with churches, religions, philosophical and non-confessional organisations foreseen by Article 17 of the Lisbon Treaty. This ninth annual high-level meeting discussed the topic **“Artificial Intelligence: addressing ethical and social challenges”**. Today’s meeting was chaired by Vice-President Andrus Ansip.

First Vice-President Frans **Timmermans**, responsible for the Article 17 Dialogue said: *“Our societies are in the midst of an unprecedented digital revolution which will impact every person living on the planet. This revolution brings new promises, and new risks of disruption. We have seen recently that the digital world moved faster than the ethical discussion about what could and should be allowed online. We cannot risk the same thing happening with Artificial Intelligence and automatization. We need to be in control of this transformation, and make sure that it is used to foster our values and defend our social model”*.

Andrus **Ansip**, Vice-President for the Digital Single Market, said: *“From better healthcare to safer transport, the benefits of artificial intelligence are many and Europe should grab them. Along with increased investments, we are developing ethical guidelines for the development of AI for good and for all. This requires an open discussion on key issues such as the importance of diversity and gender balance in AI to avoid biased decisions. Today’s meeting and the recent set up of the European AI Alliance contribute to this broad debate.”*

Today’s high-level meeting provided an occasion to address two important issues related to artificial intelligence (AI). First, the meeting looked at the potential impact of AI on fundamental rights, in particular when it comes to privacy, dignity, consumer protection and non-discrimination. Second, the social dimension of AI was addressed looking in particular at the impact of AI on social inclusion and on the future of work.

Vice-President **Ansip** encouraged the participants to continue their engagement on this topic by contributing to the ongoing initiatives of the Commission on AI, in particular through the [European AI Alliance](#) that was launched last week. The AI Alliance is a community of stakeholders brought together through an online forum to engage in a broad and open discussion of all aspects of artificial intelligence development and its impacts.

Facilitating multi-stakeholder dialogue on how to advance AI innovation to

increase trust and adoption, and to inform future policy discussions, is a commitment made as part of the recent [G7's Charlevoix Common Vision for the Future of Artificial Intelligence](#). It is also a key element of the [European approach on AI](#) and the [Declaration of Cooperation on AI](#) signed by 28 European countries.

Background

Today's high level meeting with representatives of philosophical and non-confessional organisation is the ninth in the series of meetings launched by the Commission in 2009 when the dialogue with churches, religions, philosophical and non-confessional organisations was enshrined in the Lisbon Treaty (Art 17 TFEU). The dialogue is under the responsibility of First Vice-President Timmermans. Each year, these meetings are dedicated to different topical matters. In previous years, First Vice-President Timmermans has invited participants for valuable discussions on ['Living together and disagreeing well'](#) in 2015, ['Migration, integration and European values'](#) in 2016, and ['The Future of Europe'](#) in 2017.

On 25 April 2018, the European Commission launched a European initiative on artificial intelligence (AI). The Commission is proposing a three-pronged approach to increase public and private investment in AI, prepare for socio-economic changes, and ensure an appropriate ethical and legal framework. The Commission is in particular concerned that no one is left behind in the digital transformation and that these new technologies are based on values. As with any transformative technology, some AI applications may raise new ethical and legal questions.

As part of this initiative, ethical guidelines on AI will be developed by the end of 2018, based on the EU's Charter of Fundamental Rights, taking into account principles such as data protection and transparency, and building on the work of the European Group on Ethics in Science and New Technologies.

To help develop these guidelines and provide recommendations, the Commission has appointed an expert group on AI.
