<u>Liz Truss as Prime Minister is</u> <u>"disaster for the UK and the climate",</u> <u>warn Greens</u>

5 September 2022

The Green Party has warned the Liz Truss premiership risks further fueling the climate crisis and worsening inequality throughout the country.

The Greens are calling on the new prime minister to deal with the immediate fallout of the cost of living crisis and tackle the climate emergency by lowering the energy price cap to the October 2021 rate, beginning a massive nationwide insulation programme, and investing in more renewable energy [1].

Green Party co-leader Carla Denyer said:

"Liz Truss being selected to become Prime Minister, by such a small and unrepresentative group of people, is a disaster for the UK and the climate.

"Truss' reported plans to encourage the oil and gas industry to extract more fossil fuels from the North Sea [2] will do nothing to help households as they struggle with eye-watering energy bills this winter, but will fuel the climate crisis.

"Burning more fossil fuels will simply speed up climate breakdown, giving us more extreme heat, floods, storms and food shortages in the UK and across the world.

"This reckless plan, along with promises to cut the so-called green levy, demonstrates that Truss is making an ideological choice to curry favour with friends and Tory Party donors in the oil and gas industry.

"What is needed is to return energy to a more affordable level, which is why the Green Party has put forward its proposal to restore the energy price cap to the October 2021 rate of £1,277 and implement rapid investment in a nationwide home insulation programme while developing more renewable energy. This will provide the immediate action needed to help people right now, as well as looking ahead to ensure costs and emissions are kept to a minimum in the years to come. "We can invest in a cleaner, greener, more affordable future. Whether we do so is a political choice. We urge Liz Truss to take a path that helps create a fairer society while tackling the climate crisis."

<u>Caroline Lucas responds to the</u> <u>decision to approve Sizewell C nuclear</u> <u>power station</u>

1 September 2022

Caroline Lucas, Green Party MP for Brighton Pavilion, has the following response to the decision today to approve the construction of Sizewell C nuclear power station in Suffolk:

"Sizewell C is massively costly, achingly slow, and carries huge unnecessary risks. Its approval marks Boris Johnson taking one final opportunity to kick

the public in the teeth before his departure as Prime Minister.

"This project is expected to cost up to £30 billion; and in following the Regulated Asset Base business model, it will pass that enormous upfront cost directly onto the consumer. As energy bills soar ever higher and this lame duck Government leaves people in the lurch, the last thing the public needs right now is a massively costly nuclear white elephant. Even cabinet ministers are already expressing reservations about its value for money.

"When we need oven-ready solutions to delivering energy security and slashing bills, Sizewell C simply is not one of them. Hinkley Point C will have taken the best part of two decades to go from planning to production, and it's still years behind schedule. This Sizewell plant could take anywhere between 10-17 years to build.

"Meanwhile, there are hundreds of energy-saving options and clean, cheap and home-grown renewable projects ready to go — yet solar farms are being refused at their highest rate for five years, the Government has utterly failed to adopt a retrofit revolution to slash energy bills, and now Tory leadership candidates are vowing to block onshore wind power which could be operational within days.

"Rubber stamping Sizewell C is simply Boris Johnson's woeful final attempt at making his Prime Ministerial mark — it's befitting of him that this vanity project is the wrong answer at the wrong time."

Julian Cusack, chair of Suffolk Coastal Green Party, said: "For Boris Johnson to claim Sizewell C as his legacy is just outrageous. It is the wrong and unproven technology in the wrong place and will deliver the most expensive electricity sometime in the next decade. It is totally irrelevant to today's energy cost crisis and will do wanton damage to prized landscapes and fragile local communities."

<u>Co-leader Carla Denyer responds to</u> <u>Pakistan floods</u>

30 August 2022

Commenting on the unprecedented floods in Pakistan [1], Green Party co-leader Carla Denyer said:

"The scale of the floods in Pakistan – with an area the size of the UK under water – are almost beyond comprehension. It resembles a disaster movie, but tragically this is the reality of the climate crisis. We're all seeing the impact of this emergency more and more at home in the UK, but as climate scientists have warned, the most brutal impacts are being experienced by poorer countries who have actually contributed a lot less to global CO2 emissions.

"Not only must richer countries honour previous pledges to provide "loss and damage" funding for poorer countries, but the issue must be centre stage at this year's climate talks in Egypt. We need to see a commitment to much greater levels of funding for poorer countries – delivered as grants, not loans, to prevent over-burdening these countries with debt [2].

"With its strong ties to Pakistan, and being one of the top 10 historical polluters, the UK has a particular responsibility to support the country to cope with this unprecedented tragedy affecting millions of people. The colonialism of the past also means the UK government needs to ensure it pays for 'climate reparations' [3]."

<u>Greens demand urgent intervention</u> <u>following Ofgem price cap rise</u>

26 August 2022

- Green Party calls on government to return price cap to October 2021 level
- Carla Denyer: "The way forward is clear a nationwide home insulation scheme and large scale investment in renewable energy. The longer the government delays on this, the longer it will put the UK at the mercy of volatile energy prices and climate damaging fossil fuels"

Responding to Ofgem's announcement that the new energy price cap will rise to £3,549 between October and December [1], Green Party co-leader Carla Denyer said:

"This latest rise in the price cap is a horrifying blow to households across the country and a reminder of just how broken our energy system is.

"Without proper intervention, people are going to die as a result of these unaffordable energy prices. Yet the government continues to sit on its hands, offering no help and no reassurance to the millions of people who are wondering how they are going to survive this winter.

"Only the government can make an intervention of the scale and speed required to help people through this crisis. We need to return the price cap back to what it was in October 2021, so that it is much more affordable for more people, and allow the government to absorb the global price rises through taxing the huge profits of the oil and gas companies.

"We will then need to bring the big five energy retailers into public ownership to stabilise the market and lay the groundwork for the huge investment we need to see in renewables and insulating peoples' homes, starting as soon as possible. [2]

"But it's not just households suffering from these price rises. After years of austerity, public services and small businesses are also at serious risk. We want to see more support for small businesses, and local authorities need to be properly funded and given the autonomy to make the best decisions for their local communities. "Ultimately, renewables are the cheapest form of energy, and the cheapest bill of all is the one you don't have to pay because your home is well insulated and efficient. So, the way forward is clear — a nationwide home insulation scheme and large scale investment in renewable energy. The longer the government delays on this, the longer it will put the UK at the mercy of volatile energy prices and climate damaging fossil fuels."

<u>Greens praise GCSE students for</u> <u>achievements following years of</u> <u>disruption</u>

25 August 2022

Responding to GCSE results released today [Thursday 25 August], Green Party

education spokesperson Vix Lowthion said:

"Congratulations to the Class of 2022 GCSE students for gaining their grades today after years of disruption due to the impact of the pandemic. They have achieved despite the challenges and obstacles and should be commended for their determination.

"Of course, the pandemic has had a long-term impact on the educational attainment of our young people, but the 'disadvantage gap' that researchers have identified is not only the result of Covid. It is also the result of years of school cuts, increasing levels of poverty and hardship experienced by families under this Conservative government."

Lowthion, a teacher on the Isle of Wight, added:

"We rightly congratulate many thousands of students and teachers for getting fantastic grades, but the GCSE exam system also leaves too many young people behind who have struggled to attain the results to help them take their next steps.

"We need an education and assessment system that supports all students to have the opportunity to achieve, have second chances for those who need extra support and doesn't leave anyone behind.

"There are many accounts of well-deserved achievements by our young people today after many months of hard work by staff and students, but the widening 'attainment gap' in the last 20 years (1) identified by the Institute for Fiscal Studies means that every GCSE results day there are disadvantaged young people who are less likely to succeed."

Young Greens co-chair Kelsey Trevett said:

"Congratulations to all those collecting results this morning. GCSE students have experienced government negligence throughout this pandemic, consistently putting their well-being, health, and education secondary to economic growth.

"The resilience shown by school pupils is admirable, and students should be incredibly proud.

"We reiterate our frustration at the missed opportunity to reform school assessment away from an unfair and unrepresentative exam model. And we will continue to fight alongside students for the radical educational overhaul which is necessary to prepare them for the future they are inheriting, and which values learning and education independently of its capacity for profit making."
