

[News story: Professor David Southwood reappointed as Chair of the UK Space Agency Steering Board](#)

David holds the post of Senior Research Investigator at Imperial College London where his research interests include solar terrestrial physics and planetary science.

David is a former President of the Royal Astronomical Society and was Director of Science and Robotic Exploration at the European Space Agency until 2011.

He was originally appointed to the UK Space Agency Steering Board in 2011 and appointed as Chair in 2016.

[Government response: Appointment of Kit Malthouse MP as Minister of State for Housing](#)

Minister of State for Housing, Kit Malthouse MP, said:

I am delighted to be appointed as Minister of State for Housing.

Building the homes this country needs is a top priority for this government. I am keen to build on the real progress that has been made and start working with the sector so we can deliver more homes, restore the dream of home ownership and build a housing market fit for the future.

I'm also committed to continuing the important work of supporting those affected by the Grenfell Tower tragedy and ensuring people are safe, and feel safe in their homes.

[News story: Measles outbreaks across England](#)

Updated: Added latest figures.

Latest update

Between 1 January 2018 and 6 July 2018 there have been 757 laboratory confirmed measles cases in England. Cases were reported in most areas with London (268), the South-East (161), South-West (118), West Midlands (85) and Yorkshire and Humberside (73) reporting the most cases (based on provisional figures).

Previous updates

1 June 2018

Between 1 January 2018 and 31 May 2018 there have been 587 laboratory confirmed measles cases in England. Cases were reported in most areas with London (213), the South-East (128), West Midlands (81), South-West (62), and Yorkshire and Humberside (53) reporting the most cases (based on provisional figures).

11 May 2018

Between 1 January 2018 and 9 May 2018 there have been 440 laboratory confirmed measles cases in England, with London (164), the South-East (86), West Midlands (78), South-West (42) and West Yorkshire (37) reporting the most cases.

The increase in measles circulation is mainly associated with travel to and from Europe where there are large ongoing measles outbreaks.

Young people and adults aged 15 and over who missed out on MMR vaccine when they were younger and some under-vaccinated communities have been particularly affected.

Measles is a highly infectious viral illness that can sometimes lead to serious complications and can be fatal in very rare cases.

Anyone who has not received 2 doses of MMR vaccine is at risk, but young people in environments with close mixing such as festivals are more at risk, as well as unvaccinated people travelling to Romania and Italy, where there are currently large outbreaks. Anyone planning to travel to Europe should check [NaTHNaC travel health advice](#).

PHE local health protection teams are working closely with the NHS and local authorities to raise awareness with health professionals and local

communities.

The MMR vaccine is available to all adults and children who are not up to date with their two doses.

Anyone who is not sure if they are fully vaccinated should check with their GP practice who can advise them.

Dr Mary Ramsay, Head of Immunisation at PHE, said:

The measles outbreaks we are currently seeing in England are linked to ongoing large outbreaks in Europe. The majority of cases we are seeing are in teenagers and young adults who missed out on their MMR vaccine when they were children.

Anyone who missed out on their MMR vaccine in the past or are unsure if they had 2 doses should contact their GP practice to catch-up.

This serves as an important reminder for parents to take up the offer of MMR vaccination for their children at 1 year of age and as a pre-school booster at 3 years and 4 months of age.

We'd also encourage people to ensure they are up to date with their MMR vaccine before travelling to countries with ongoing measles outbreaks.

The UK recently achieved WHO measles elimination status and so the overall risk of measles to the UK population is low, however, we will continue to see cases in unimmunised individuals and limited onward spread can occur in communities with low MMR coverage and in age groups with very close mixing.

Press release: Water companies need to do more to protect the environment, report shows

Although there has been a gradual improving trend in environmental performance over recent years, the industry is not doing enough to reduce serious pollution incidents and comply with permits. Last year saw a rise in the most serious pollution incidents, with 'Category 1' incidents at 11. Previous reductions in serious (Category 1 and 2) incidents have also plateaued continuing at around one incident per week.

[The Water and Sewerage Companies' Environmental Performance Report](#) rates how well the big nine water and sewage companies (operating mainly or wholly in England) managed their impact on the environment in 2017. This is done across a wide range of measures – including pollution, managing sewage and complying with permits – and also compares individual company performance.

For the third year running, United Utilities and Wessex Water were the top performing water companies, and now Severn Trent Water has joined them. These companies received the top 4 star rating.

While the majority of companies delivered a 'good' or 'leading' performance, there are some poorer performers – the report reveals an urgent need by South West Water and Northumbrian Water to improve their performance which has seen them rated lowest this year. South West Water are the worst performer on pollution incidents and Northumbrian Water on permit compliance.

This comes in the face of record fines for the sector – in total more than £21million were issued as a result of 16 successful prosecutions by the Environment Agency. This has been driven by changes in Sentencing Guidelines. Earlier in the year, Emma Howard Boyd, Chair of the Environment Agency, called for fines for the most serious pollution incidents to be proportionate to the turnover of water companies.

Despite some good performances, the report demands far greater progress in 2018 and subsequent years. The Environment Agency has recently set out a more ambitious programme of environmental improvements which water companies will have to make between 2020 and 2025 – totalling £5billion of investment.

Toby Willison, Executive Director of Operations for the Environment Agency, said:

The leading companies in this report show that reducing their environmental impact can be done, so we look to companies to share good practice and improve quickly. But one serious pollution incident is one too many. We will always work closely with companies who want to do the right thing but we will take action against those who don't.

Over the last 30 years there has been a significant improvement in water quality and this has happened not only thanks to the industry's massive investment but also the Environment Agency's strong regulatory role

The environment will benefit from a further £5billion of investment from the water sector by 2025. We expect to see a clear and continued focus on environmental performance in the next round of water company business plans to be submitted in the autumn.

The report concludes with a reminder about the pressures on water quality and supply – with a growing population and climate pressures on the water environment, and increased public and legal expectation, water companies need

to further rise to the challenge and improve promptly. The Environment Agency will work with and regulate the companies to help achieve a better environment.
