

# Speech: CHOGM 2018 – Investing in Global Britain

Good afternoon, and welcome to this 'Investing in the UK' event.

It is a pleasure to have so many of you attending today.

The Commonwealth Heads of Government Meeting is, first and foremost, a forum of cooperation and a chance to strengthen our partnerships with friends and allies.

This event is, then, a welcome opportunity for me to talk exclusively about the strengths of the United Kingdom!

As Secretary of State for International Trade this is something that I've had the opportunity to practice all over the world, from Sydney to Vancouver, from Bangkok to Bogota – and everywhere in between.

Fortunately, it's a message that I'll never get tired of delivering.

For some less well-informed investors, the economy of the UK begins and ends in London.

There is no denying that our capital is one of the great global cities.

It is the world's foremost financial centre – a hive of commercial activity unrivalled anywhere in Europe with an economy roughly the size of Sweden's.

Moreover, it is a city that continues to be at the cutting edge of new industries. Take, for example, technology.

Last year, new tech companies were founded in London at the rate of one an hour.

In that same period, more tech venture capital was invested in this city than in Germany, France, Spain, and Ireland combined.

I could go on about the merits of London. But the department I lead has a remit covering the whole of Great Britain and Northern Ireland and is tasked with spreading the prosperity and opportunity of international trade across the whole country.

Moreover, today's event is designed to showcase the vast commercial prospects that exist both inside and outside our capital.

Few people realise that almost 80% of the UK's GDP is generated outside London.

The UK remains the number one destination for inward investment in Europe, with an open, liberal economy, a flexible and dynamic labour market,

business-friendly taxation and regulation and a strong, transparent rule of law.

Fundamentally, the UK is a safe and stable economy in which to invest, with a proven track record of returns for our global partners.

I'm delighted that we are joined today by a panel of 6 recent investors in the UK, hailing from across the Commonwealth, who will share their experience of doing business here.

You will hear their stories of successful investments across the country, including:

Seqirus from Australia, whose centre of excellence in Liverpool has created 100 new jobs in developing a new flu vaccine.

South Africa's Fair Tree Capital, whose hotel portfolio spans South West England and the Lake District.

And Royal Enfield Motorcycles, whose new technology centre in Leicestershire involves significant UK-India cross collaboration on engineering and design.

Added to this, I am delighted to announce that India's Wadhawan Global Capital will invest £300 million into the UK over the next few years, supporting 1,000 jobs.

This is just one of 55 potential deals that we have identified across 17 Commonwealth member states, collectively worth over £2.7 billion, and creating some 5,800 jobs.

I very much look forward to learning what Wadhawan's plans are during the fireside chat later in this session.

Our panellists' businesses are part of an extensive pattern of investment that exists between the UK and the Commonwealth.

In the 2016/17 financial year, there were 384 new FDI projects in the UK from Commonwealth investors – 17% of the overall total.

These created almost 10,000 new jobs across the country and safeguarded a similar number.

The importance of our Commonwealth partners to the UK economy cannot be overstated.

India is the fourth-largest source of UK FDI, just behind the United States and China.

In turn, India comes just ahead of Australia and New Zealand, which together have overtaken Japan to land 127 new projects in the UK.

It is no wonder that 2016/17 was the most successful year for FDI in this country's history, given the strength of our regional diversity.

By this I don't mean the bewildering array of accents and cultures spread over this small island, but the regional expertise that exists to support certain industries.

Wales, for example, has recently seen a £3 million investment from the Melbourne-based life science firm Medical Ethics.

The company cited the UK's proven capacity to provide the expertise required to commercialise their technology, including regulatory affairs, manufacturing and clinical studies.

Tax subsidies and patent incentives were also a contributing factor, giving the UK a competitive edge when compared to other locations around the world.

Meanwhile, South West England boasts strong links with the aerospace and nuclear industries, with the presence of Rolls Royce and Airbus, as well as the new reactor development at Hinkley Point, creating a highly skilled local workforce.

The South East is home to globally renowned film studios at Pinewood and Leavesden, while Cambridge and East Anglia plays host to 'Silicon Fen', as well as Europe's most important life science and research clusters.

It also hosts Motorsport Valley – a globally leading cluster of high-performance technology, motorsport and advanced engineering companies that includes the majority of the world's Formula 1 Teams.

The area also contains Silverstone race circuit – familiar to many as the home of the British Grand Prix.

Most importantly, the UK's 2 flagship regional economic development programmes – the Midlands Engine and the Northern Powerhouse – are having a significant impact on Britain's regional prosperity, creating a wave of new commercial opportunities.

The Midlands is now home to the largest number of medical technology companies in the country, with 8 world-class research universities combining their collective excellence to drive cutting edge innovation, research and skills development.

And the Northern Powerhouse has brought together the great cities and towns of the North of England to form a global hub of advanced manufacturing and energy capability.

We have the National Graphene Centre in Manchester.

We have Sheffield's Advanced Manufacturing Research Centre; the home of Boeing's new high-tech component manufacturing facility – much praised when I visited Boeing's Headquarters in Seattle last week.

And we have the National Innovation Centre for Data, which opened in Newcastle last year.

These regions were the cradle of the Industrial Revolution. Now, once again, they are world leaders in science, industry and technology.

And let's not forget Northern Ireland, with its burgeoning machinery and engineering sector.

Or Scotland, which is leading the world in the uptake and development of renewable energy.

With all of these, I hope I have given you a flavour of the vast opportunities that are available in this county and inspired you to look to London and beyond for your investment.

My Department for International Trade is committed to ensuring that the UK continues to be a global leader in attracting foreign investment.

Earlier this month we launched our new FDI strategy, designed to focus our efforts on maximising wealth creation across the whole UK, and to transform DIT from one of the most respected investment promotion organisations in the world, to the most sophisticated.

Our 3-part approach will make innovative use of data in measuring the economic impact of projects.

It will identify those opportunities across the UK with the greatest potential for international investors.

And it will target government support precisely where it will have the greatest positive impact on the economy.

DIT, together with our overseas business partners, intends to fully realise the potential of every part of the United Kingdom, and build a more prosperous future for Britain, the Commonwealth, and the world.

Now, I'm sure you're all as eager as I am to hear from our panellists, but first, I have the great pleasure of introducing the Lord Mayor of London.

For more than 8 centuries, the Lord Mayor and the City of London Corporation have been London's beating commercial heart.

They have been instrumental in the City's success and have forged its international reputation.

This afternoon, we have the pleasure of his views and experience on the almost limitless investment opportunities that London has to offer.

Lord Mayor – welcome.

# Press release: Aberdeen has a bright future post-Brexit, ministers tell industry leaders

Businesses in Aberdeen have today been reassured by ministers that they have the full support and backing of the Government as the UK prepares to leave the EU.

The Exchequer Secretary to the Treasury, Robert Jenrick, and Brexit Minister, Robin Walker, visited the 'Granite City' to meet local businesses and leaders from the oil and gas, and fishing industries. They listened to local concerns and underlined the UK government's determination to get the best Brexit deal for people living and working in Aberdeen.

The ministers were in town to host the Oil and Gas forum with senior representatives from energy companies, such as BP and Shell, as well as supply chain companies and the Oil & Gas Authority.

Exchequer Secretary to the Treasury, Robert Jenrick said:

"For the first time in many years the Government is holding its oil and gas summit here in Aberdeen, to listen to the sector and the wider business community.

"We are supporting the oil and gas industry making it more competitive and innovative, and securing a strong future for it and for Aberdeen.

"We want to see Aberdeen's economy continue to thrive and are pleased to be meeting businesses and entrepreneurs across the city and county."

Brexit Minister, Robin Walker, said:

"Aberdeen's vibrant, diverse industries – from oil and gas to fishing – are renowned the world over. As we leave the EU, we're committed to enabling these great Scottish businesses to go from strength to strength.

"That's why I was pleased to talk to Scottish industries today about our ongoing negotiations with the EU. The implementation period we agreed in March will provide the certainty they've rightly been asking for, as well as give us the opportunity to go out into the world and negotiate new trade deals for the first time in 40 years.

"Our future outside the EU is a bright one for Scottish business as part of a global UK."

Discussions at the oil and gas forum focussed on the opportunities and challenges posed to the sector by Brexit, as well as how government support and the multi-billion package of generous tax cuts has provided greater stability for the industry – protecting jobs and driving innovation.

The Exchequer Secretary saw this innovation first hand on a subsequent visit to the ASET International Oil & Gas Training Academy, where engineers tasked with fixing oil rigs and emergency responders are trained for a career in the North Sea.

The ministers also attended a business event with the Aberdeen and Grampian Chamber of Commerce. There, they met with up to 80 local entrepreneurs to hear their priorities for Brexit and answer their questions.

Brexit Minister, Robin Walker, also met the Scottish Seafood Association to discuss our desire to build a new economic partnership with the EU that secures the freest and most frictionless trade possible in fish products between the UK and the EU, alongside the opportunities coming to the wider UK fishing community. From December 2020 we will be negotiating fishing opportunities as an independent coastal state, deciding who can access our waters and on what terms for the first time in 40 years.

### **Notes to editors:**

Since 2014, the UK government has supported the Oil and Gas industry with:

- Significant cuts to tax rates: permanently reducing Petroleum Revenue Tax from 50% to 0%, and cutting Supplementary Charge from 32% to 10%;
- The introduction of a new basin-wide Investment Allowance, reducing the effective rate of tax for companies who are investing in new developments;
- £40 million of funding for seismic surveys, to support activity in under-explored parts of the UK Continental Shelf, plus a further £5 million to support exploration projects in 2018-19;
- Jointly investing up to £250m with the Scottish Government through the Aberdeen City Region Deal, which includes support for the Oil & Gas Technology Centre; and
- Announcing a transferable tax history to support transactions of late life oil and gas fields, available for deals from 1 November 2018.

# illegal fishing

Environment Agency Fisheries Enforcement Officers in the North East are continuing their crackdown on illegal angling.

This week they carried out boat patrols on the River Tees on the lookout for people fishing illegally. On Wednesday they reported two men for fishing for pike during the coarse fishing close season near Preston Park.

The close season prevents fishing for coarse fish for 3 months to give the fish a chance to breed. It runs from 15 March to 15 June inclusive.

Kevin Summerson, Fisheries Enforcement Technical Specialist with the Environment Agency in the North East, said:

The Environment Agency's role is to protect fish stocks and improve fisheries. This includes rescuing fish in distress, improving habitat and restocking rivers across the region which have been affected by pollution or poor fish passage.

However, the close season means fish are left alone during the spring to allow them the opportunity to breed. During this time our specialist enforcement teams police illegal fishing as they do all year round to ensure compliance with the law.

## **Licences checked**

Enforcement officers have checked around 500 anglers since the beginning of April so far, with most being fully licensed and compliant. Enforcement officers have reported 15 people for offences.

During March the Environment Agency prosecuted nine anglers at courts in the North East for unlicensed fishing and associated offences, resulting in fines and costs totalling almost £2,000. Kevin added:

We take all kinds of illegal fishing very seriously, whether it's those fishing without a licence or licensed anglers using illegal equipment.

It's not fair on other anglers who make sure they fish within the law, and also endangers the future of the sport by damaging the sustainability of fish stocks. It's really important people report information about suspected illegal fishing to us so we can investigate.

The Environment Agency's work is intelligence-led and they work closely with partners to target known hot spots and where illegal fishing is reported. It

urges anyone to report illegal fishing by calling 0800 80 70 60.

Coarse fishing is still allowed on most still waters and canals, depending on fishery owner agreement, though a valid fishing licence is still required. You can check which still waters and canals still have a close season in operation by [checking the byelaws which apply in your area online](#)

Anyone who wants to go fishing needs to buy a fishing licence. A full annual licence costs from just £30 (short term and some concessionary licences are also available) and are [available online](#)

## [Corporate report: National Waste Programme Quarterly Report: Q4 FY 2017 to 2018](#)

The National Waste Programme (NWP) is a cross-UK programme of work to lead the ongoing implementation and delivery of the UK Nuclear Industry Solid LLW Strategy.

The NWP covers all nuclear industry waste producers including those in the NDA estate, the public sector and the private sector. The NWP is led by LLW Repository Ltd on behalf of the NDA (who are responsible for leading strategy implementation for the Department for Business, Energy and Industrial Strategy (BEIS)).

The NWP works collaboratively with its stakeholders to produce a Blueprint and Benefit Map to show the direction of travel for strategy implementation. The activities to deliver the strategy are executed by the stakeholders of the NWP, for example by waste producers through their waste management

practices.

Find out more about the [National Waste Programme](#); established to implement the [UK LLW Strategy](#). An industry-wide collaboration led by LLWR on behalf of the NDA.
