

[Notice: NG17 8EP, Veolia ES Nottinghamshire Limited: environmental permit draft decision advertisement](#)

The Environment Agency consults the public on certain applications for waste operations, mining waste operations, installations, water discharge and groundwater activities. In some cases they also consult on draft decisions for environmental permits. The arrangements are explained in its [Public Participation Statement](#)

These notices explain:

- the Environment Agency's proposed decision and the reasons and considerations on which they've based this
- additional relevant information available since the application was advertised
- any information or guidance provided by the Secretary of State relevant to the application

[Press release: February 2018 Transaction Data](#)

The transaction data shows HM Land Registry completed 1,632,969 applications in February compared with 1,782,088 in January and 1,516,596 last February, of which:

1. Transaction Data is published on the 15th working day of each month. The March Transaction Data will be published at 11am on Monday 23 April 2018 at [HM Land Registry Monthly Property Transaction Data](#).
2. We are challenging ourselves to reassess our language to make our terms understandable to both our commercial and citizen customers. This is in line with our commitment set out in the [Business Strategy 2017-2022](#) under the 'simplicity' element of our ambition.
3. The monthly Transaction Data shows how many applications for register create (new titles), leases, transfer of part, register updates (updating existing titles), official copies of the register and search and hold queries (official searches) were completed. It reflects the volume of applications lodged by customers using an HM Land Registry account number on their

application form.

4. Completed applications in England and Wales shown by region and by local authority include postal applications as well as those sent electronically.
5. Transaction Data excludes pending applications, bankruptcy applications, bulk applications, and discharge applications (to remove a charge, for example, a mortgage, from the register).
6. Transactions for value are applications lodged involving a transfer of ownership for value. For an explanation of other terms used, see [abbreviations used in the transaction data](#).
7. Most search and hold queries carried out by a solicitor or conveyancer are to protect the purchase and/or mortgage. For example, a search will give the buyer priority for an application to HM Land Registry to register the purchase of the property. This can give an indication of market activity.
8. Reasonable skill and care are used in the provision of the data. We strive to ensure that the data is as accurate as possible but cannot guarantee that it is free from error. We cannot guarantee our data is fit for your intended purpose or use.
9. Transaction Data is available free of charge for use and re-use under the [Open Government Licence](#) (OGL). The licence allows public bodies to make their data available for re-use.
10. If you use or publish the Transaction Data, you must add the following attribution statement:
Contains HM Land Registry data © Crown copyright and database right 2017.
This data is licensed under the Open Government Licence v3.0.
11. HM Land Registry's mission is to guarantee and protect property rights in England and Wales.
12. HM Land Registry is a government department created in 1862. It operates as an executive agency and a trading fund and its running costs are covered by the fees paid by the users of its services. Its ambition is to become the world's leading land registry for speed, simplicity and an open approach to data.
13. HM Land Registry safeguards land and property ownership worth in excess of £4 trillion, including around £1 trillion of mortgages. The Land Register contains more than 25 million titles showing evidence of ownership for some

85% of the land mass of England and Wales.

Research and analysis: Future of the sea

This report considers the role that science and technology can play in understanding and providing solutions to the long-term issues affecting the sea. It outlines a number of recommendations to help the UK utilise its current expertise and technological strengths to foster trade links, build marine capacity across the world and collaborate to tackle climate change.

Further details of the project and the supporting evidence are available from the [Foresight project page](#).

Press release: Employment rate reaches joint record high

Figures released by the Office for National Statistics show that 402,000 more people have moved into employment in the last year.

The unemployment rate (4.3%) has not been lower since 1975, and the number of people out of work is down by 127,000 compared to a year ago.

The number of people not working and not looking for work fell by 158,000 on the year. The rate has not been lower since records began.

Since 2010, over 70% of employment growth has been in permanent roles, with around 70% in higher skilled work.

Secretary of State for Work and Pensions Esther McVey said:

Getting a job means securing an income for a family and the chance to build a better future. That's why up and down the country we are doing all we can to help people into work.

And from next month, we'll be taking thousands more people out of paying tax and also increasing the National Living Wage, benefiting those on the lowest pay and making sure they keep more of what they earn.

In fact by raising the National Living Wage we have ensured that the lowest earners have seen their wages grow by almost 7% above inflation since 2015."

The amount of money people can earn before they start paying income tax will rise in April 2018 from £11,500 to £11,850. From 1 April 2018, the National Living Wage – the minimum paid to employees aged over 25 – will rise from £7.50 an hour to £7.83, equating to a £600 annual pay rise for full-time workers on basic pay.

This comes as we have reformed welfare to make work pay, backed businesses to take more people on, and built a stronger, fairer economy.

But we want to help even more people benefit from a well-paid job. That's why we are:

- improving the welfare system with Universal Credit, which helps people move into work faster and to stay in work longer than under the old system
- introducing a modern Industrial strategy to help businesses create better, higher-paying jobs in every part of the UK
- helping people stay in work longer with our Fuller Working Lives strategy, which supports employers to recruit, re-train and retain older workers
- tackling inequalities in employment highlighted by the Race Disparity Audit, through targeted support in 20 areas around the country and £90 million announced by the Prime Minister to help young people

Today's figures also show:

- since 2010, the number of people in employment has increased by around 3.2 million
- 83.4% of employment is in the private sector, with 16.6% in the public sector
- the female employment rate is at a record high of 70.9%, with over 15 million women in work – a rise of 234,000 on the year

Separate figures out today showed that [770,000 people are now on Universal Credit](#) as the rollout of the new benefit continues. Of these, 39% were in employment (300,000). Through Universal Credit, people are keeping more of their earnings as their Universal Credit payment gradually adjusts when their income climbs.

[Press release: New river forecasts for North East communities](#)

A new service which allows people to get forecasts for river levels to help them plan for flooding is available for two locations in the North East.

It is being provided by the Environment Agency on the gov.uk website for the River Tyne at Hexham, Northumberland, and Lustrum Beck at Stockton-on-Tees.

All communities can see observed data for river levels for the past five days. Now people living in these two areas can also see their future flood risk in a 36-hour river level forecast.

The aim is to help communities be more aware of their flood risk and be able to plan for potential flooding incidents. The new river forecasts are calculated by computer models that take into account data like current flows and expected rainfall.

Forecast information can change quickly so people are still advised to sign up for the Environment Agency's free flood warning service to ensure they are notified if a warning is issued for their community.

And residents and businesses can still get the most up-to-date and accurate situation from the [live online map](#) which updates every 15 minutes and details the current Severe Flood Warnings, Flood Warnings and Alerts in place.

Help residents manage flood risk

Phil Taylor, from the Environment Agency's Flood Resilience Team in the North East, said:

We are always looking at ways to use technology to better share information with people, and residents have told us that they would find it really useful to see these forecasts to help them manage their flood risk.

We want people to know if they are at risk of flooding, be prepared, and take action to protect themselves and their families. A wealth of information is available on our website for people to find out if they are at risk and understand how to prepare.

Everything residents and businesses need to know about how to check their risk and prepare for flooding is online on the [Floods Destroy website](#).

The new 36-hour river forecasting for Hexham and Stockton can be found online at:

[Lustrum Beck, Stockton-On-Tees](#)

and

[River Tyne at Hexham](#)

The plan is to continue to refine the service based on feedback from users before rolling it out to other areas in the future.

People who live in areas where the 36-hour forecast is not available can still view data on river levels from the previous five days.
