

Press release: Technology is helping to transform the way the UK delivers aid abroad

Entrepreneurs will explore how to use mobile technology, such as smartphones that give access to affordable and safe energy, to help tackle humanitarian challenges around the world, the International Development Secretary announced ahead of Mobile World Congress this week.

DFID is joining forces with leading mobile technology trade body the GSMA to launch Mobile for Humanitarian Innovation, a programme bringing the mobile industry and humanitarian community together to improve how we prepare and respond to emergency situations.

Speaking ahead of the congress in Barcelona, Ms Mordaunt said:

Technology and innovation have a huge role to play in improving the lives of millions of people in the developing world.

I want to harness the UK's renowned entrepreneurial spirit and use new technology to deliver smart solutions around the world on everything from health care to natural disasters. DFID's partnership with the GSMA is an exciting joint push to use mobile technology to boost our global humanitarian efforts.

Access to mobile networks can transform the way humanitarian help is delivered through access to information, services and connection to families. The GSMA have estimated that by 2025 there will be nine billion mobile connections globally, with 75 per cent coming through on smartphones.

Mobile for Humanitarian will find new ways of helping developing countries around the world on areas including mobile money, mobile-enabled energy, climate resilience and food security.

Director General of the GSMA Mats Granryd said:

The GSMA is pleased to further its partnership with DFID to accelerate the delivery and impact of sustainable digital humanitarian assistance.

The scale and reach of mobile networks make them uniquely place to help meet the challenges faced by humanitarian responders and affected populations. Together with DFID, we will build bridges between the mobile industry, other private sector partners and the humanitarian community to catalyse innovation and demonstrate the impact of digital humanitarian assistance.

Five ways technology and innovation funded by UK aid are improving people's lives around the world:

1. Rural Connectivity Project in Tanzania

A total of 1.6 billion people globally do not have access to 3G connectivity. The GSMA and DFID have worked with local network operators and government to facilitate a rural roaming agreement in Africa. The pilot in Tanzania explored how to reach unconnected citizens living in rural areas. Due to this partnership, and the new towers that were built, 70,000 people in Tanzania now have access to mobile internet, bringing education, health and financial services to previously unconnected communities.

2. 3D printing emergency supplies in Nepal

With support from DFID, Field Ready, a not-for-profit organisation which uses technology and design to transform the way humanitarian aid is delivered, is trialling 3D printing of life-saving and life-improving medical and other supplies in the field – such as umbilical cord clamps, wrist braces and water pipe components – so that vital equipment can be manufactured on demand, where and when it is needed. DFID funding has allowed them to test this approach in Haiti and Nepal, and they have also expanded their work to Syria and the recent response to Hurricanes Irma and Maria in the Caribbean.

3. Mobile technology helping women access essential maternal healthcare.

Tanzania remains one of the most dangerous places in the world to give birth and to be born, according to the high maternal, infant and childhood death rates. UK aid is funding a programme forging stronger links between the mobile and healthcare industries. Healthy Pregnancy, Healthy Baby is a free text message service in Swahili for pregnant women, mothers with newborns up to 16 weeks old, as well as supporters of pregnant women and new mothers. Subscribers register for the text messaging service by indicating the woman's current week or month of pregnancy, or the age of the newborn baby. The messages cover a broad range of topics from prevention of mother to child transmission of HIV/AIDS, family planning, malaria prevention and postpartum care. As of November last year, it has reached over 1.8 million users.

4. Mobile phones improving access to clean energy

Mobile-enabled solar technology is helping to keep families safe in Uganda. Many homes use kerosene for lighting, an unsafe and unhealthy way of using energy. The lack of clean affordable power limits development. UK aid has funded the development of a ready-pay power system which can be paid in instalments using mobile phones. The system uses solar power to charge mobile phones and power lights, radio and TV. 95 per cent of those lacking energy in their homes are covered by mobile access which means this solution helps them to unlock energy on a daily, weekly or monthly basis.

5. PayGo energy

Many households in Kenya cannot afford gas to cook because it comes in large, expensive canisters. The alternative, firewood, causes health issues from

inhaling smoke. With the support of UK aid, PayGo has developed a meter that goes on top of a gas canister and, using mobile payment technology mPesa, users are supplied with a standard size canister and are able to buy small units of gas as and when they need it. The start-up business is based in Nairobi.

Notes to editors:

The GSMA represents the interests of mobile operators worldwide, uniting nearly 800 operators with more than 300 companies in the broader mobile ecosystem, including handset and device makers, software companies, equipment providers and internet companies, as well as organisations in adjacent industry sectors. The GSMA also produces industry-leading events such as Mobile World Congress, Mobile World Congress Shanghai, Mobile World Congress Americas and the Mobile 360 Series of conferences.

News story: Education Secretary celebrates students in the North-East

An inspirational pupil from the North-East has been awarded a prize for his success at school and contribution to the wider community by the Education Secretary Damian Hinds today (Monday 26 February).

An outstanding pupil who volunteers at a disability centre and helps pupils who speak English as an additional language has been awarded the Lord Glenamara Memorial Prize by Education Secretary Damian Hinds today (26 February).

Mohammed Dagher, student from Heaton Manor School in Newcastle-upon-Tyne, received the Lord Glenamara Memorial Prize at a special event in London. He was recognised for his outstanding academic achievements and impressive voluntary work including providing one-to-one support and guidance to younger students who speak English as an additional language, producing an anti-bullying video and volunteering at a disability centre.

The annual prize – which is now in its sixth year – recognises sixth form students from the North-East who have excelled in their studies while making contributions to their school or wider community.

Academic standards are rising in England, with over 48,000 more pupils in the North-East in schools rated good or outstanding than in 2010 and 87 per cent of North-East schools given this rating at their last inspection.

Education Secretary Damian Hinds said:

Congratulations to Mohammed and all this year's nominees. It is fantastic to see so many bright young people celebrated not only for their academic achievements but also for the work they are doing with their local community.

The Lord Glenamara Memorial Prize was created in memory of former MP for Newcastle Central, Ted Short. The winner and nine runners-up had the opportunity to tour the London School of Economics (LSE) campus, and met with the Education Secretary and Permanent Secretary of the Department for Education, Jonathan Slater.

2018 award winner Mohammed Dagher said:

To be even nominated for this highly regarded award was a blessing, but to come out as a winner is something I will be forever grateful for.

I'd like to thank my sixth form tutor and the sixth form team for having the faith in me by nominating me, and also my teachers, family and friends for keeping me motivated in order to aspire to achieve high results.

I hope to inspire younger students to contribute to their society, whilst also maintaining excellent grades. This in itself will be a great achievement for me.

Following the award, Mohammed will be undertaking a two day work experience programme at the Department for Education's offices in London.

The government has made clear its commitment to support schools and pupils in the north through the Northern Powerhouse Schools Strategy, a £70 million fund to improve education.

Notes to editors:

The runners-up in alphabetical order:

1. Mohammed Baroudi, John Spence Community High School
2. Emily Brown, Conyers School
3. Kate Cowan, Carmel College
4. Niamh Hughes, St Thomas More Roman Catholic Academy
5. Devika Jayan, St Anthony's Girls' Catholic Academy
6. Sarah Knight, St Anthony's Girls' Catholic Academy
7. Emily McKerrill, St Wilfrid's R.C. College
8. Emmet O'Leary, St Robert of Newminster Catholic School and Sixth Form College
9. Ellie Rylance, Grindon Hall Christian School

About the Lord Glenamara Prize

The prize is open to school pupils in years 11 and 12 across the North East of England who have shown:

- strong academic performance across a range of subjects; and
- a civic contribution, particularly volunteering personal time for activities such as:
 - mentoring younger pupils
 - helping with extracurricular events
 - working with a youth group or a charity outside school hours
 - an interest in government, education, history or public service.

Speech: Matt Hancock's speech at the European Bank for Reconstruction and Development Western Balkans Summit

Your speech will follow the President of the EBRD and the Prime Minister of Bulgaria.

Good morning,

I'm delighted to be here with you today, in the heart of the City of London. What better place to talk about the wide ranging benefits of economic development and investment?

The EBRD was founded at the end of the Cold War, a war which for so many decades divided our people and put barriers in the way of economic growth.

The EBRD's mission – to use private investment to support the journey from conflict to peace and prosperity – is as relevant now as it was almost three decades ago.

You have done vital work in the Western Balkans to develop the private sector, enhance energy security and sustainability, and support connectivity and regional integration. We fully support your work and want to see it continue.

The potential of the Western Balkans

I vividly remember watching scenes of conflict from the region when I was growing up.

And yet since then, the region has made what seemed like unimaginable progress towards a brighter and more peaceful future.

The Western Balkans is a land of real economic potential, with rates of economic growth exceeding that of the EU.

And that potential can be further unlocked through structural reforms, to create an environment where investment and enterprise can flourish.

This means building relationships with the private sector to increase market diversity and also developing the structures that sustain a thriving economy.

But most of all it means co-operation. And that is why we are all here today.

It is fantastic to see every Western Balkans leader here in this room. For it is your political leadership that needs to drive this agenda forward to attract investors like those in the audience today. And we will be with you every step of the way as you do this.

International co-operation

As the Prime Minister said in Munich this month, the UK is unconditionally committed to peace, security and prosperity in Europe after we leave the EU.

And this is just as true in the Western Balkans. We have a longstanding and enduring commitment to the security, stability and prosperity of the region, and this will never change.

We are working with governments from all six Western Balkans countries to improve the rule of law; promote economic governance and address corruption.

And we are matching these bilateral efforts with multilateral efforts alongside our international partners.

Just look at the activity that is planned this year.

There's the European Commission's Western Balkans Strategy, the Sofia summit in May and our own Western Balkans Summit, hosted in London, in July.

We want this to build on the progress forged at previous "Berlin Process" Summits.

It will focus on security cooperation...

On tackling common threats that deter investment, like corruption and organised crime.

And crucially, on supporting economic stability and interconnectivity and taking steps to improve the business environment.

The power of digital

There is one theme that strikes a particular chord with me. Digital is a key part of my portfolio as Secretary of State at DCMS and I am a huge believer in the transformational power of new technology.

So I am thrilled that one of the themes of our Summit will be a focus on young people and especially giving them the digital skills they need to flourish.

The British Council, supported by the UK Government, has already been working with young people across the Western Balkans to make this happen.

The 21st Century Schools programme is helping young people in the region to learn about coding and other digital skills.

Whilst the Digital Cities programme has been connecting cities in the UK and Western Balkans to develop digital policies and strategies.

I welcomed some of the participants to Westminster last month and it was fantastic to see how they were energised by the connections they had made and the ideas they had exchanged.

The digital economy presents huge opportunities for the Western Balkans.

We've already seen the seismic effect it can have in other parts of Europe. Estonia is a country of just over a million people, but through its relentless focus on digital skills and innovation, it is now one of the world's leading tech nations.

Digital transformation, when done correctly, can make societies more open, more prosperous and can foster the development of civil society.

But digital investment will only go where the conditions are right. With your large young population and impressive growth, you have a real opportunity to build something special.

But to seize this opportunity you will need to build confidence; investors will look to you to improve the business environment, boost the private sector and deal with their concerns about corruption and the rule of law.

Digital has incredible potential to support you in your reform efforts in the Western Balkans.

That is why digital will be an important part of July's summit, and I hope it will provide the foundations for the next phase of progress in the region.

Conclusion

If I leave you with one message today it would be this; we have a shared ambition for a brighter and more prosperous Western Balkans.

To all the investors here today; thank you for your vote of confidence in the region.

And to all the leaders here today; you have a great opportunity ahead to drive lasting change that will shape your nations for decades to come.

And you will have our support as you do so.

Thank you very much and enjoy the rest of the day.

Speech: New Queen's Counsel appointment ceremony speech

It is a pleasure to be here today in Westminster Hall to preside over the formal appointment of all 119 barristers and solicitors to the rank of Queen's Counsel, as well as those being appointed as Honorary Queen's Counsel.

Let me welcome you warmly, the only warmth you will feel for a while. This is the day when your hard-earned achievements are publicly recognised by the Crown and by your peers. It is also a proud day for your long-suffering spouses, parents, children, friends and wider family, who I hope will enjoy the ceremony and importance of this day for you.

Today represents a journey to the pinnacle of your profession. That journey has been more marathon, than sprint, and I congratulate you on lasting the course so far.

The title of Queen's Counsel is a mark of excellence, not just in this country but around the world, where it plays an important role in supporting the attractiveness of English and Welsh legal services more broadly.

Since the eminent jurist, Sir Francis Bacon, who was the first person to be titled King's Counsel in 1604, the title has been sought after both by practitioners and by clients seeking to instruct counsel.

It recognises the depth of expertise and eminence you have in your particular field of law. It is also a mark of distinction in the art of advocacy, in developing and advancing a client's case and getting the best outcome for them.

As you will be well aware, the process for becoming Queen's Counsel is a robust and rigorous one, based on competence and merit. It is important that it is a process open to all suitably qualified advocates – including solicitors.

Given my own background, I was pleased to see that there are solicitor-advocates who are being awarded the title of Queen's Counsel amongst us today.

It's now 21 years since the first solicitor advocates were appointed as Queen's Counsel. One of those appointed in 1997 subsequently served on the Supreme Court. We should recognise and promote talent from whichever branch of the profession it comes.

I am also pleased to note that this year, 64% of female applicants have been recommended for practising QC, and 55% of BME applicants. As the leaders of

your profession, you are role models for all aspiring lawyers and I hope you take this responsibility seriously.

This year there are 119 awards of silk. Her Majesty the Queen makes the appointments on the advice of the Lord Chancellor. My predecessors and I would not be able to undertake this role without the valuable advice of an independent selection panel. I am incredibly grateful for the work Sir Alex Allan has done in chairing the panel – and to all its distinguished members; including:

- Wanda Goldwag
- Tony King
- Martin Mann QC
- Edward Nally
- Quinton Quayle
- Dame Janet Smith
- Dr Maggie Semple OBE
- Shaun Smith QC
- Ranjit Sondhi CBE

They continue to provide advice of the highest quality, and run a transparent and open competition which ensures that we can have confidence that appointments have been made fairly and justly on merit.

In addition to those who have been awarded silk, there are also seven awards for Queens Counsel, *honoris causa*. I would like to thank the highly qualified selection panel, chaired by Scott McPherson, a former Director General at the Ministry of Justice and consisting of:

- Amelia Wright
- Professor Peter Alldridge
- Andrew Langdon QC
- Joe Egan
- Lord Justice David Richards

This award is recognition for lawyers who have made a major contribution to the law of England and Wales outside of practice in the courts.

Honorary QCs

I would like to say a few words about each of those who are receiving the title of Honorary Queen's Counsel today.

Professor Michael Bridge is a leading academic and Fellow of the British Academy who has made a major contribution to the law of England and Wales in relation to the sale of goods.

Professor Louise Gullifer has contributed widely through her work in academia and beyond, including as Professor of Commercial Law at Oxford and her work on Security Interests as part of the UK delegation to the United Nations Commission on International Trade Law.

Dr Charles Harpum, who unfortunately is unable to attend today's ceremony, is

a barrister and former academic who served as a Law Commissioner and made a major contribution to the law of England and Wales as a significant architect in the shaping of the Land Registration Act 2002.

Janet Legrand is a pioneer in enhancing the role of women in the law, promoting social mobility, diversity and inclusion within her own firm and the wider profession through the board of PRIME.

Professor Nigel Lowe has done a mixture of international work and family law and is particularly known for his work relating to the Hague Convention.

Professor Nicola Padfield has made a huge contribution in both academia, where she is Professor of Criminal and Penal Justice at Cambridge University, and in the criminal justice system, where her research focuses on sentencing and parole.

Finally, Professor Maurice Sunkin has pioneered an empirical approach to the law and undertaken a number of leading studies of the use, operation and effects of judicial review in England and Wales.

Conclusion

I'd like to warmly congratulate all of you and thank you for your contribution to the law across such a diverse range of disciplines and fields.

The role of Queen's Counsel is not only a mark of quality recognised around the world, it also promotes high standards of advocacy in the legal profession.

All of us here today, and all those who supported your appointment, have shown confidence and belief in you. That's a confidence and belief that I entirely share.

I would like to again thank everyone involved in the process of appointing this year's selection of barristers and solicitors to the rank of Queen's Counsel and Honorary Queen's Counsel.

I would like to congratulate you all again on being appointed Queen's Counsel and wish you well for the future.

[Notice: Y061 1TU, Allium Helmsley Ltd: environmental permit application](#)
