The Environment Agency publish permits that they issue under the Industrial Emissions Directive (IED).

This decision includes the permit and decision document for:

- Operator name: Banham Poultry Limited
 - Installation name: Station Road Site
 - Permit number: EPR/QP3935HF/V005
-

Notice: TF1 5HW, Johnsons Aggregates and Recycling Limited: environmental permit issued

The Environment Agency publish permits that they issue under the Industrial Emissions Directive (IED).

This decision includes the permit and the decision document for:

- Operator name: Johnsons Aggregates and Recycling Limited
 - Installation name: Johnsons Aggregates and Recycling Ltd – Recycling House
 - Permit number: EPR/RP3237YR/A001
-

News story: Loughborough stationery firm secures stateside success

Ohh Deer supplies illustrated greeting cards, stationery, clothes and homeware, designed by handpicked artists and illustrators, recently working with Mr Men and Battersea Dogs and Cats Home to create 2 bespoke product ranges.

The company, which makes as many of its products as possible in the UK, has also collaborated with retail giants ASOS and Urban Outfitters.

From their humble beginnings working from a relative's attic, Ohh Deer have now opened 2 stores in Loughborough and Ipswich – the founders' hometowns and counts the likes of Selfridges and John Lewis amongst its customers.

The business' headquarters, has since moved to The Rushes, Loughborough, and employs 22 permanent staff, which doubles during peak seasons.

To make the most of the demand for its products internationally, Ohh Deer turned to the Department for International Trade (DIT) for advice on how to navigate customs regulations and paperwork requirements in countries it was exporting to for the first time.

The company has since seen significant success in the US, with Papyrus, a leading North American stationery and greeting card retailer, increasing its order volume by 500% in the last year. Papyrus operates over 450 stores across the US and Canada.

Mark Callaby, Founder, Ohh Deer, said:

It's vital for our business to continue to diversify and grow, gaining more market share in order to protect against any unpredictable changes in the retail sector. DIT provided us with start-up advice in the very beginning and has since provided us with funding to attend various international trade shows in the US. These have helped us make new contacts and learn from other businesses and their experiences.

The majority of the countries we export to speak English, which has made our exporting journey much less daunting, but there are other specific challenges we've faced. For example, every country has their own differing paperwork requirements. DIT has been a great help in understanding this in the US by providing advice and support on the logistics of customs.

There are so many opportunities to trade with international partners that businesses, like us, aren't aware of. But, with the support of DIT and after doing some market research in potential target markets we discovered the quirkiness of our products was actually a unique selling point. If we can export successfully, with the right guidance and support, so can other businesses in the Midlands.

Ian Harrison, Head of Exports for the Midlands at the Department for International Trade, said:

We're pleased to see Ohh Deer's continued success in overseas markets and look forward to working alongside them as they continue to grow.

British firms have a strong trading relationship with the US, and Ohh Deer is a great example of a business who has made the most of the demand from this economy. It is important businesses identify suitable partners and fully understand market and regulatory requirements in order to do well, which Ohh Deer has done effectively.

We have a team of specialist advisers on the ground in the East Midlands, who are on hand to support budding firms as they look to start or build its exports.

Online support, find a buyer, and export readiness tools are available at great.gov.uk, where thousands of live export opportunities are also promoted.

Press release: New HIV diagnoses across the UK fell by 17 per cent in 2017

Data published today by Public Health England (PHE) reveal that new HIV diagnoses in the UK have fallen for the second year in a row. New diagnoses decreased by 17% in 2017 – from 4,363 new diagnoses reported compared to 5,280 in 2016, which brought new cases down to their lowest level since 2000.

This decrease continues a downward trend that started in 2015, with an overall 28% reduction in new HIV diagnoses between 2015 and 2017. The reduction was largely driven by a decline in new HIV diagnoses among gay and bisexual men, which fell by 17% compared to 2016 and by 31% compared to 2015. This decrease was due to the high uptake of HIV testing in this group, particularly repeat HIV testing among higher risk men. Increased uptake of anti-retroviral therapy (ART) – drugs that keep the level of HIV in the body low and help prevent it being passed on – also significantly contributed to the decline in new diagnoses.

New HIV diagnoses in black African and Caribbean heterosexuals have been steadily decreasing over the past 10 years. For the first time, a UK-wide fall was also seen in new diagnoses in heterosexuals from other ethnicities, with a drop of 20% in 2017 when previously they had remained stable at around 1000 per year.

Professor Noel Gill, Head of the STI and HIV Department at Public Health England, said:

We are pleased to see that UK prevention efforts are having a significant impact on new HIV diagnoses, and this heralds the lowest number of HIV diagnoses in the UK since 2000. However, we know that anyone who has sex with a casual partner without a condom or shares needles may be at risk of infection.

The most common way of getting HIV in the UK is through having sex without a condom – so consistent and correct condom use with new and casual partners stops you getting or transmitting HIV and other STIs. If you think you have been exposed to HIV it is easy to get tested so, if positive, you can start treatment as soon as possible.

Steve Brine, Public Health Minister said:

HIV is a devastating and life-altering disease. Today's figures mean we are well on our way to eradicating it once and for all but we have not an ounce of complacency.

Our commitment to prevention has led to more people getting tested and almost every person with a diagnosis is now in treatment – meaning they are unlikely to pass the virus on to someone else. I am committed to ensuring that we deliver on our promise to reduce the number of people contracting HIV even further.

There are very effective treatments for HIV that enable people diagnosed with the virus to live a long and healthy life, and minimise the risk of onward transmission. Early diagnosis through regular testing ensures people get the greatest benefit from these HIV treatments. HIV testing is freely available through GP surgeries, local hospitals and sexual health clinics, as well as through a self-sampling service or by using a home-testing kit.

Public Health England, alongside other government and third sector organisations, is working to control HIV by 2030 and these new figures are an encouraging sign that this is achievable.

Background

1. Epidemiological data on new HIV diagnoses and people receiving HIV care can be found in the [PHE health protection report and annual HIV data tables](#). Regional and Local Authority data on new HIV diagnosis rates, late diagnoses and diagnosed HIV prevalence data can be analysed on the [PHE Sexual Health Profiles](#).
2. The data shows that:
 - In 2017, 4,363 people were newly diagnosed with HIV in the UK, a reduction by 17% compared to the 5,280 diagnoses reported in 2016.
 - There were 2,330 new HIV diagnoses among gay and bisexual men reported in 2017, a 17% reduction from the 2,820 diagnoses in 2016 and 28% reduction from the 3,390 diagnoses in 2015.
 - There were 594 new HIV diagnoses among black African and Caribbean

heterosexuals in 2017, a reduction of 23% compared to the 775 diagnoses in 2016.

- Overall, 42% of people were diagnosed at a late stage of infection (CD4 count <350 cells/mm³ at diagnosis) in 2017. Late diagnosis is associated with a ten-fold increased risk of short term mortality (within a year of diagnosis).
 - In 2017, there were 230 people with an AIDS-defining illness reported at HIV diagnosis (5.3%) and 428 deaths among people with HIV.
 - In 2017, 93,385 people were receiving HIV-related care in the UK, with 98% (91,266/93,385) receiving anti-retroviral therapy to control the virus. Of those receiving anti-retroviral therapy in 2017, 97% (88,528/91,266) had untransmissible levels of virus.
3. HIV is a virus which damages the cells in people's immune system and weakens their ability to fight everyday infections and diseases. Without treatment, after an average of 10 to 15 years, the infection is fatal.
 4. PHE advises gay and bisexual men to have an HIV test at least once a year, or every 3 months if they're having unprotected sex with new or casual partners. Black African men and women are advised to have a regular HIV and STI screen, if they're having unprotected sex with new or casual partners.
 5. You can find out more information about how to prevent and get tested for HIV on [NHS Choices](#). The HIV home sampling service offers an alternative to traditional testing offered by GPs and sexual health clinic. Visit www.FreeTesting.hiv to find out more about free HIV home-sampling test kits.
 6. It is too early to know the size of the expected additional effect on underlying HIV transmission and new HIV diagnoses of the scale-up of pre-exposure prophylaxis (PrEP). PHE is supporting NHS England in delivering the 3-year [PrEP Impact Trial](#), which began in October 2017.
