

Speech: Condemning Use of Chemical Weapons in Syria

Thank you Mr President,

When I heard Russia had called today for an urgent meeting on the use of chemical weapons in Syria, I was glad that we could return to an issue on which this Council has a duty to ensure that those responsible are held to account.

That duty is even more pressing today, because yet another heinous attack on civilians was reported yesterday to the Council by the UN Secretariat. In this attack on Douma, in Eastern Ghouta, at least 21 civilians were treated with symptoms consistent with chlorine exposure. This follows a further reported attack on Eastern Ghouta on 13 January affecting six people.

Mr President,

In 2016 the Joint Investigative Mechanism found in three cases that the Syrian regime had used chlorine gas to attack civilians. Last year, it found the regime had used Sarin in Khan Sheikhoun. Now, as the regime are escalating their attacks on eastern Ghouta in an attempt to force the besieged opposition to surrender, we remain deeply concerned by continued reports of chemical weapons use in Syria.

In all this let us not forget that it was the regime's attack on Eastern Ghouta using Sarin in 2013 that led to this Council adopting resolution 2118, which had the clear, unanimously endorsed aim of disarming Syria of its chemical weapons programme.

Throughout this process Russia has claimed to act as a leading power, a guarantor. But when the Assad regime deliberately ignored its obligation to stop using chemical weapons and continued to do so with such careless disregard for civilian life, Russia has chosen to abuse its power of veto to protect the Assad regime.

Russia says that they supported the renewal of the JIM mandate and that it was the rest of us who could not agree with their terms that killed it. Yet their previous resolution would have removed the JIM's ability to investigate the Assad regime, which has been found responsible for multiple attacks. Russia has made clear several times they will not support a new investigative mechanism as long as it has the power to hold to account a Member State of the United Nations. And it seems from my rapid reading of the latest text that this proposal is another attempt to shift attention onto non-state actors. The Russians have even claim that Syria is a signatory in good standing of the Chemical Weapons Convention. They are not. They have not completed their declaration. The OPCW has repeatedly warned of inconsistencies, gaps and omissions. Russia has great influence over the Assad regime. For the sake of the Syrian people, for the sake of preventing

future use of chemical weapons, we call on Russia to persuade their Syrian friends to get rid of their chemical weapons and comply fully with the Chemical Weapons Convention.

By ending the JIM, Russia also stopped the mechanism's investigations of Daesh chemical attacks – the investigators had found that these terrorists had carried out at least two such attacks. We unreservedly condemn Daesh for its use of these vile weapons, which is yet another reason why we need to defeat these terrorists once and for all.

Mr President,

The UK was proud to join the International Partnership against Impunity for the Use of Chemical Weapons led by our French colleagues today in Paris. The use of chemical weapons is barbaric, illegal under international law and must stop. We must ensure we re-establish a mechanism to ensure accountability. We all know where the obstacle to that lies. In response, we will only redouble our efforts to pursue accountability for these crimes.

Thank you Mr President.

Speech: “We will continue to support MINUSMA and its mandate to support implementation of the Peace Agreement.”

Thank you Mr President,

I would also like to thank the Secretary-General for this comprehensive report on the situation in Mali and Jean-Pierre for so clearly setting out the report's findings during your briefing. And I'd also like to welcome Minister Koulibaly here to the Council today.

Mr President, let me start by echoing the words of my Ethiopian colleague and welcoming the absence of violence between the signatory parties in Mali during this reporting period.

These conditions provide the best chance for the successful implementation of the Peace and Reconciliation Agreement. We commend all parties for their continued commitment to the definitive cessation of hostilities and urge them to remain committed.

The United Kingdom strongly supports the Peace and Reconciliation Agreement and the ongoing dialogue between the parties. We welcome the adoption of a

revised timetable at the meeting of the Comité de Suivi de l'Accord last week.

We strongly encourage all parties to reaffirm their commitment to the Agreement and to work together to implement the outstanding actions, as outlined by them, in the latest timetable, as soon as possible.

It's now been over two and a half years since the Agreement was signed. We, like many other Council members, are frustrated by the lack of meaningful substantive progress made in implementing the Agreement.

We urge all parties to speed up the implementation of the Agreement. The Malian people's patience is not infinite and it is incumbent on all parties to deliver in good faith on the commitments they made in the Peace and Reconciliation Agreement.

We welcome the appointment and participation of the independent observer, the Carter Centre, in the Agreement Monitoring Committee. We hope that this will lead to greater accountability for the delays in implementation.

We will work with the international community to identify those who seek to block or prevent the full implementation of the Peace Agreement which now constitutes a basis for sanctions designations.

Elections are crucial to delivering on the promise of decentralisation in Mali, and are central to the Peace Agreement. It is disappointing that local elections have been delayed. It is crucial that credible and fair local, presidential and parliamentary elections are delivered in 2018.

Mr President, while we recognise that the best route to long-term stability in Mali is through the implementation of the Peace Agreement, the security situation today remains poor and stabilisation of this region is urgent. The UK is taking action in three ways to provide stability.

First, as the Prime Minister announced last week, we will be deploying three British Chinook helicopters to the Sahel, and we will continue the support we offer through our heavy lift transport aircraft, increasing the ability of French troops to manoeuvre efficiently in their battle against extremists.

Second, the UK will provide an additional \$70 million in aid to the region, including lifesaving humanitarian support for hundreds of thousands of people affected by epidemics, natural disasters and conflict.

And third, we will continue to support MINUSMA and its mandate to support implementation of the Peace Agreement, including the redeployment of reformed and reconstituted Malian defence and security forces and the protection of civilians. We look forward to the upcoming strategic review of MINUSMA which will be crucial to set the future direction of peacekeeping support to Mali.

We also reiterate our support for the G5 Sahel Joint Force and its objectives of tackling terrorism, organised crime, people smuggling and human trafficking in the region. We welcome the support of the international community in pledging funding to this initiative.

We recognise the importance of MINUSMA's technical and logistical support to the G5 Joint Force in assisting it to get up to full capacity, and we encourage the swift implementation of a technical agreement to enable this. We also reiterate the calls of the Security Council for implementation of a robust human rights compliance framework by the G5 Sahel Joint Force.

We recall, however, that the G5 Sahel was not created solely as a military force and that there is no exclusive military solution to insecurity in the cross-border regions. G5 cooperation with MINUSMA on development and humanitarian efforts will be crucial.

Mr President, in conclusion, we welcome the positive steps made since the last Council session, including the reduction in violence. But now is the time to see meaningful progress, and actions, to implement the Peace Agreement. This is the only way to achieve lasting peace and security Mali and the region.

Thank you.

[Speech: Nick Gibb: How can policy ensure education equity?](#)

Thank you.

How can and should policy be developed to ensure education equity? A knowledge-rich curriculum should be at the heart of all schools. We believe that is key to ensuring education equity. Endowing pupils with knowledge of 'the best that has been thought and said' and preparing pupils to compete in an ever more competitive jobs market is the core purpose of schooling.

And ensuring that pupils from disadvantaged backgrounds have the same opportunities as their more affluent peers to benefit from the cultural capital of a stretching and rigorous curriculum is key to addressing the burning injustices in our societies and driving forward social mobility.

Designing and implementing these curricula should follow a thorough interrogation of the research. It is right that debates are had about what knowledge we wish to ensure all pupils possess. It is understandable that there are differing opinions about how best to prepare pupils for the challenges of the 21st century. But opinions must change as the facts change.

In 2010, the government came to office in Britain. We inherited a curriculum that was not fit for purpose. The national curriculum had been stripped of knowledge, leaving pupils without the cultural literacy they needed.

England was stagnating in the international league tables and too many pupils

were leaving school ill-prepared to compete in our increasingly globalised world. Data from 2012 shows we were the only OECD country where the numeracy and literacy of our 16-24 year olds was no better than that of our 55 to 65 year olds.

We reformed the national curriculum, restoring knowledge to its heart and clarifying what we expected children to be taught. The issues with the 2007 National Curriculum were best summed up by the statutory requirement of secondary chemistry pupils to understand 'that there are patterns in the reactions between substances'.

In 'Could Do Better' Tim Oates used this example to highlight the vagueness of the 2007 curriculum, writing:

This statement essentially describes all of chemistry. So what should teachers actually teach? What are the key concepts which children should know and apply?

The new maths national curriculum for primary schools provides many examples of the specificity and detail needed for a successful curriculum, such as the structured sequence of efficient written methods of calculation that pupils are expected to have mastered at different ages.

But the curriculum does not sit in isolation. The government also embarked on an ambitious reform of our national qualifications. Grade inflation was rife under the previous government and too many pupils – particularly from disadvantaged backgrounds – were being entered into low quality qualifications. Public confidence in the education system had been knocked.

The government put an end to grade inflation and is introducing new GCSEs and A levels that put England's exams on a par with the best in the world. These changes are breathing life back into the country's education system.

However, the introduction of new assessments has also been important. The government has announced the introduction of a multiplication tables check for year 4 pupils – a short online assessment designed to support the curriculum stipulation that pupils should know their tables by age 9. The government is determined that no child leaves primary school without securing the basics of mathematics.

Already, the government has had success thanks to another curriculum change supported by a short assessment. Conscious of the overwhelming research in favour of teaching children to read using systematic synthetic phonics, the government embarked on a campaign to ensure every child is taught to read using the most effective methods. As well as requiring schools to teach using an evidence based phonics programme, the government introduced the phonics screening check – a short assessment of a pupil's ability to decode simple words.

The phonics screening check was introduced for the first time in 2012. That year, just 58% of 6-year-olds could correctly read 32 or more words from a

list of 40. Thanks to the hard work of teachers and the government's drive for phonics, there are 154,000 more 6-year-olds on track to be fluent readers this year. The proportion passing the phonics screening check in year 1 has risen to 81%, with 92% having passed the check by the end of year 2.

The success of this policy has been confirmed by international results. The PIRLS international study of 9-year-olds' reading ability in 50 countries around the world showed that England has risen from joint 10th place in 2011 to joint 8th place in 2016, thanks to a statistically significant rise in our average score. And the data is clear on the role that the phonics reforms played in these results, with the report accompanying the results concluding that:

The characteristics that were most strongly predictive of PIRLS performance included prior achievement in the Year 1 Phonics Check.

Thanks to the hard work of teachers and by twinning carefully sequenced, knowledge-rich curricula with wider support, the government is raising standards in our schools.

In carrying out the reforms implemented since 2010, the government was careful to pursue evidence based policies. In the world of education, there are many voices who argue that the 21st century has somehow changed how education must be done. They conclude that the technological age necessitates a different approach to education. With the support of some in the business world, they encourage teachers to turn their attentions to developing the creativity, problem solving and critical thinking skills of their pupils.

Around the world, many educationists – and I see one or two of them here – promote skills-based curricula as the way to prepare pupils for life in the 21st century. Often, knowledge-rich curricula are derided as an impediment to helping pupils to become creative critical-thinking problem solvers, but this is to confuse means with ends.

The mistake made by these influential voices in education is to believe that creativity is a skill independent of subject domain-specific knowledge; that critical thinking can be taught discretely from the subject being thought about, or that one becomes a better problem solver simply by practicing solving problems.

Just as musicians become proficient by learning their scales, it is as important that pupils build up the underlying knowledge they will need. We cannot expect a pupil to think critically about the causes of the First World War without an understanding of the delicate balance of power that existed at the turn of the 20th century. And we will not prepare pupils to be the creative, problem solving mathematicians of the future without giving them a firm grounding in the foundations of mathematics.

This government in the UK is determined that the new national curriculum endows pupils with the knowledge they need, so that they are best prepared for the rigours of a globalised 21st century jobs market. But doing so must

be done with due regard for the evidence. There are too many examples of governments around the world that have mistaken ends with means in the hope of preparing pupils for the 21st century, damaging educational standards in the process.

Writing for the London School of Economics, Professor Lindsay Paterson of the University of Edinburgh has been a vocal critic of movements calling for skills-based curricula, writing of the underlying philosophy:

It belongs to that strand of curricular thinking sometimes known as constructivism. The essence of this view is that studying bodies of knowledge is pedagogically ineffective. Knowledge goes quickly out of date, and learning it is dull. Children emerge allegedly unable to think for themselves, unskilled for work in the new economy, and unprepared to act as democratic citizens. Instead, children should be enabled to construct knowledge for themselves.

This description exemplifies the belief system behind such changes. But this view is not supported by the international evidence. As Professor Paterson goes on to say, referencing teachers who are leading the knowledge-revolution in England:

It is increasingly clear from international comparisons that neglecting knowledge is educationally disastrous. One body of international evidence for that is assembled by E. D. Hirsch in his 2016 book *Why Knowledge Matters*. Especially cogent arguments in the same vein have come from two teachers in England who have become eloquent writers – Daisy Christodoulou's 'Seven Myths About Education' (2013) and David Didau's 'What If Everything You Knew About Education Was Wrong' (2015). The critique does not deny that skills matter, but rather says that the best way to acquire skills is through gaining knowledge.

This nuanced understanding of the relationship between knowledge and skills is crucial to approaching curriculum design. In particular, the importance of subject domain specific knowledge to skill acquisition and transferability should be more widely understood.

A successful curriculum should enable pupils to participate in the great conversations of humankind, and it should prepare pupils to thrive in an ever more globalised and competitive economy. Both of these ambitions require a curriculum designed to give pupils access to the best that has been thought and said. Pupils deserve a rich and stretching knowledge-based curriculum that provides them with cultural literacy and a foundation of knowledge to use and apply in a variety of contexts.

We should judge our curricula by their success in achieving these aims.

Thank you.

Speech: William Shawcross's speech at the Charity Commission's Annual Public Meeting

Good morning.

Thank you all for making the time to come to our public meeting.

This is a very special event for the Commission.

First, of course, because of His Royal Highness the Duke of Cambridge.

His Royal Highness follows in a noble, important tradition in the monarchy in his regard and support for charity.

Since the reign of George III, royal patronage has been vital to British philanthropy.

Charities should heed the [Duke's reflections](#).

I agree with him that it is crucial that charities work together to secure the best outcomes.

Charities should be judged, ultimately, by the difference they make. By their impact.

And so must we, the Charity Commission.

I am confident that we are now better equipped to achieve this than we were in 2012, when I started as Chairman.

Helen has set out the many ways in which we have improved.

Forgive me if I say a bit more. When I arrived it was clear that we were still reeling under the impact of the 50% real-terms cut in our budget since 2010. My predecessor Susie Leather and her chief executive Sam Younger had valiantly struggled to limit the impact of that cut, but times were very hard.

Soon after I arrived in 2012 it was revealed that we had registered in good faith a new charity which was later considered to be operating an elaborate Gift Aid Scam. Margaret Hodge hauled me before the Public Accounts Committee, where I did not give a very good account of myself. Understandably enough she unleashed the National Audit Office on us.

A few months later the NAO published an appalling report saying we were not fit for purpose and Mrs Hodge muttered darkly about putting this little

quango on the bonfire.

By then I had assembled a strong new board, all of whom agreed that given our reduced circumstances we must first of all carry out our statutory duty to protect and enhance the reputation of the charitable world. And to do that we had to be seen to regulate firmly. We agreed three priorities – to stop fraud in charities, to protect vulnerable beneficiaries such as children and old people in charitable care, and to protect all charities from abuse by extremists.

I hope we have carried out all three tasks effectively. That could not have been done without our staff – our two excellent new chief executives, Paula Sussex, and now Helen Stephenson and their executive teams – and above the staff in our four offices – London, Taunton, Liverpool and Newport. Because, don't forget – we are the Charity Commission for England and Wales.

Our staff have demonstrated a commitment that goes way beyond duty. Indeed, it is quite remarkable. Many of them have said often to me they enjoy the job because of the essence of charity which they are trying to protect and because of its extraordinary variety.

So I take this opportunity to say publicly what I say to many staff members privately: thank you.

I am delighted that their work, and that of our Chief Executives and Board has now been recognised by the National Audit Office in their most recent report, last autumn. They said we had made 'significant progress' – that is a gold medal in NAO language.

More than one government has also been helpful. In 2014, the Chancellor George Osborne gave us a one-off grant of £8 million to modernise and (dread word) digitise our systems.

And in 2016 Parliament, with government backing, passed a new Charities Act to give us more powers to act against those few dishonest or recalcitrant trustees whose misbehaviour threaten the reputation of all others. We have used those new powers sparingly but, I hope, effectively.

I am delighted that the government has also recognised that our resources must be bolstered. Yesterday, we were awarded an additional £5 million per year to help us respond to significant increases in demand on our core functions, including registration and compliance. That's an increase of almost 25% on our present budget.

We have also been granted permission to consult on charging charities so that we can provide more of the enabling work that charities tell us they need. I think this is absolutely vital to securing the future of the charitable sector.

I would also like to thank the many wonderful charities I have had the privilege of encountering.

They have made my time with the Commission among the most fulfilling, and

rewarding of my professional life.

Some charities have made a truly lasting impression.

I was very impressed with volunteers I met at the charity Mosaic. A charity incidentally, with its own links to Royalty – it is supported by the Prince's Trust.

The charity runs a mentoring programme for young people, supporting them through education and into work. Meaningful philanthropy does not always need to involve giving vast amounts of money away. Sometimes, the most precious thing we can give of is our time.

I was also deeply moved by my visit to the offices of the charity Afghan Connection, founded by the inspiring Dr Sarah Fane. The charity focuses on educating children in Afghanistan, especially girls. I think education of girls and liberation of women is one of the most important issues in many parts of the world today.

In 2001, when the US led invasion overthrew the brutal Taliban there were 1 million children in school, almost all of them boys. Now there are almost 8 million children in school, about 40% of them girls.

Afghan Connection has built 46 schools for 75,000 children, about half of them girls. That is a huge change – and a hugely important one.

They have also taught children cricket – which has become a national craze in Afghanistan!

Some charities improve the lives of individuals, others enrich communities. Last year I met the Cornwall Community Foundation, which raises funds to support charities across the county. Often tiny, "kitchen table" charities and projects. Such as, recently, refurbishing a play area in St Keverne, whose equipment had become unsafe. The play area now sports a zip wire. I know the joy of zip wires. They can make a big impact in young lives – and older ones too.

I have also enjoyed our public meetings enormously, as they bring me and Commission staff into contact with local charities across the country.

Those in Wales have always been especially fun, thanks to the sheer energy and enthusiasm of attendees.

Last year we held a public meeting in Cardiff, and one of the trustees attending arrived three hours early, as he didn't have a ticket and wanted to make sure he would be admitted.

Another time we had an annual meeting in a pub in Carmarthen. We were so overwhelmed with attendees that our staff had to drag in sofas from elsewhere. There was still standing room only and a very lively debate ensued.

These experiences speak of the vibrancy of charity and also how much trustees

value the Commission's advice and guidance.

The sheer idiosyncrasy of charity has never ceased to delight me.

A Commission staff member told me only last week about one of her cases, involving a small village charity in Herefordshire. It was set up in the late 18th century to provide gifts for the poor at Christmas. The charity's governing document until this day has been in the form of a stone tablet. It hangs in the local parish church for villagers to inspect.

It is a reminder of the long, deep, Christian history of charity within communities across the country. But a reminder also that charities should not rest on their past, however glorious or eccentric: the Commission is helping the trustees modernise the charity's purposes, so that it can make a more meaningful impact in the community today.

These are just a few examples of the diversity and wonder of the modern charity world.

I see charities as being among the greatest of our national assets. They are part of what makes us distinct as a nation, and what brings us together as citizens.

I would like to end with a quote from William Beveridge in the pivotal year, 1948 when the NHS was created.

Beveridge was the philosopher behind the creation of the welfare state by the 1945 Labour Government, in which my father was a proud Cabinet member.

Some members on the left of that government thought that the welfare state would replace philanthropy and charity. Beveridge never thought that, nor wished it. He wrote:

"The making of a good society depends not on the State but on the citizens, acting individually or in free association with one another, acting on motives of various kinds—some selfish, others unselfish, some narrow and material, others inspired by love of man and love of God. The happiness or unhappiness of the society in which we live depends upon ourselves as citizens, not only the instruments of political power which we call the State."

That is why charities which live their values, and demonstrate the greatest possible impact for their beneficiaries, and respect for their donors and for the public are so vital.

And why, I believe, the work of a strong Commission that regulates with purpose and intelligence, is so necessary too.

Thank you.

Corporate report: Sellafield Magazine: issue 8

Sellafield Magazine takes you behind the scenes at the Sellafield site and the work of Sellafield Ltd.

In this issue:

- Safe storage: Providing safe containment for nuclear waste for centuries is going to involve the manufacture of containers on a scale never before seen in the UK.
- Safety, delivery and value: 2017 review
- Maximising our social impact
- Evaporator D
- What is Transformation?
- Thorp: The final countdown
