

Press release: Boston man faces hefty fine for fishing without a licence

Our fisheries enforcement officers patrol rivers and lakes to check fishing licences

The Environment Agency is reminding anglers of the importance of having a fishing licence, after a Boston man was ordered to pay more than £600 for fishing without one.

Aivis Putnins, aged 32, of St Bedes Drive, Boston, was proved guilty in absence at Northampton Magistrates' Court on 21 December 2017.

The defendant was found to be using unlicensed fishing instruments on the River Witham, Boston, on 20 August 2017, in breach of the Salmon and Freshwater Fisheries Act (1975).

Following the verdict, Steve Powell, Enforcement Team manager for the Environment Agency, said:

It's important that all anglers understand how seriously the courts take these offences and we hope it will act as a deterrent for any angler thinking of fishing without a licence.

All the money raised from licence sales is used to protect and improve fish stocks and fisheries, benefitting anglers. Those cheating the system will be prosecuted.

Every year across the country, thousands of anglers are prosecuted by the Environment Agency for not having a fishing licence. The agency and its partners work to catch illegal anglers in the act.

As well as swindling other anglers, fishing illegally can harm wildlife and carries a hefty penalty. Getting caught without a licence could land you with a fine of up to £2,500.

Any angler aged 12 or over, fishing on a river, canal or still water needs a licence. An annual licence costs from just £30 (concessions available) and is available from GOV.UK or by calling the Environment Agency on 0344 800 5386 between 8am and 6pm, Monday to Friday.

Anyone with information about illegal fishing activities can contact the Environment Agency Incident Hotline on 0800 80 70 60 or Crimestoppers, anonymously, on 0800 555 111. Notes to editors:

Mr Aivis Putnins was ordered to pay a fine of £440, costs of £171, and a

victim surcharge of £44. The total penalty was £611.

[News story: Cross-border portability of online content services](#)

The IPO launched a consultation on its proposed approach to [enforcement of the EU Portability Regulation](#) which ends on the 31 January 2018.

From 1 April 2018, online streaming services will be required to allow EU based subscribers access to paid-for content when temporarily in another EU Member State, for example when on holiday. Free services and those tied to the payment of licence fees, (for example BBC iPlayer) can offer this service but are not obliged to. Service providers are not allowed to impose an additional charge to provide portable services or to take steps to decrease the quality of the service in other Member States.

The [Regulation](#) contains a number of safeguards to ensure copyright is protected. For example, providers must verify the Member State of residence of subscribers to ensure they are entitled to receive content. A failure to verify subscribers may result in copyright infringement.

Appropriate enforcement mechanisms need to be in place in UK law when the Portability Regulation comes into effect. We have considered how to provide this and our proposed approach is outlined in the technical consultation.

Questions on the consultation process should be directed to portability@ipo.gov.uk.

[News story: FCO Minister for Asia and the Pacific Mark Field visits Vietnam](#)

During his visit, Mr Field will chair the 6th UK-Vietnam Strategic Dialogue together with the Deputy Minister for Foreign Affairs Bui Thanh Son. They are expected to discuss a broad range of issues, including bilateral trade and investment; cooperation in education, science and innovation; the UK-Vietnam defence relationship; and global issues such as the illegal wildlife trade.

Minister Field will separately meet Deputy Prime Minister and Foreign Minister Pham Binh Minh to discuss regional security and human rights as well as UK-Vietnam trade and investment and post-Brexit relations.

The Minister will also have a meeting with Vice Minister of Agriculture and Rural Development Ha Cong Tuan to discuss the illegal wildlife trade and the role which Vietnam can play to lead action in South East Asia and at the 2018 London Conference on IWT following the Hanoi IWT Conference in 2017

The Minister will visit the Hanoi Stock Exchange to promote UK financial services. He will also visit the National Hospital of Tropical Diseases to promote the UK's research, innovation and education collaboration with Vietnam.

His programme will also include a visit to a bear rescue centre to witness first hand its work on combating the illegal wildlife trade, and where he will meet representatives of NGOs to talk about the upcoming 2018 illegal wildlife trade conference in London.

Minister Field said:

I am delighted to be here in Hanoi for the UK-Vietnam Strategic Dialogue, celebrating the forty fifth anniversary of diplomatic relations between our two countries. I hope this visit will help to deepen our already strong partnership and will identify areas for further cooperation.

There is much more we can do to work together in areas such as trade investment, defence links, research and innovation as well as important global issues such as combating serious and organised crime, the illegal wildlife trade and modern slavery

News story: Minister for Asia and Pacific Mark Field returns to Thailand for Strategic Dialogue

The Minister's main focus, along with his Thai counterpart, His Excellency Mr Virasakdi Futrakul, the Deputy Minister of Foreign Affairs, was the third UK-Thailand Strategic Dialogue. They covered a wide range of topics including Brexit, trade and investment in Thailand, science and innovation, education and the illegal wildlife trade.

Minister Field said:

I am delighted to be back in Bangkok and to have the opportunity to meet my Thai counterpart for wide-ranging discussions. As Prime Minister Theresa May has said, the UK is a country that goes out

into the world to build relationships with old friends and new allies alike, a great, global trading nation that is respected around the world.

Our relationship with Thailand is an important element of this, and spans a broad range of issues from bilateral trade and investment to regional security.

In Bangkok, Mr Field met with Prime Minister Prayuth Chan-o-cha to deepen the UK-Thailand relationship and to explore opportunities to increase our bilateral trade and prosperity.

Mr Field also met the Minister of Natural Resources and Environment, General Surasak Karnjanarat, to discuss how the UK and Thailand can cooperate on tackling the illegal wildlife trade and climate change.

Following his visit to Bangkok, Minister Field travelled to Hanoi in Vietnam.

News story: The Maritime Enterprise Innovation and Research Conference 2018

The Maritime, Enterprise, Innovation and Research (MEIR) unit are looking for key technologies that will significantly improve the ability for unmanned/autonomous systems to operate in the underwater environment, by expanding their use and employ-ability for military and commercial use. Proposals will be welcomed through the [DASA Open Call for Innovation](#).

The MEIR challenges will be briefed in detail at the MEIR Conference at the University of Strathclyde (Glasgow) on 24 January 2018. MEIR members, which include the Royal Navy and MOD subject matter experts, will be on hand at this event to discuss the technical detail behind the challenges. Representatives from the DASA team will be present to discuss how the Open Call will support this.

There are 2 specific challenges for which the Royal Navy seeks innovative technologies to resolve, by:

- Providing, or contributing towards, low power, high accuracy navigation for unmanned underwater vehicles (UUV).

This challenge is based on the fact that current UUV navigation systems tend to rely on relatively high power inertial systems. A low power solution would enable greater endurance or increased capability, and utility could be

increased through expanding the ability to navigate without input from other traditional autonomous navigation sensors (for example, GPS).

- Allowing longer duration operations from autonomous systems.

This challenge is based on expanding system range and endurance through advanced energy management and generation, energy scavenging and storage, and the use of low power systems.

MEIR aims to bring together Users, SMEs, Tier1 Industry partners, DASA and Defence Innovation funding to develop a clear exploitation path to solve/assist solving complex maritime problems in the underwater environment through creativity and collaboration.

If you are interested in registering for this event, please get in touch directly with the University of Strathclyde on corporate-events@strath.ac.uk
