

# News story: New ePassport gates opened at Edinburgh Airport

The 10 new ePassport gates at International Arrivals 2 were officially opened by Border Force Chief Operating Officer Emma Moore and Edinburgh Airport Chief Executive Gordon Dewar on Friday 18 August.

They are in addition to the existing 5 ePassport gates at International Arrivals 1.

The new ePassport gates provide EEA nationals, aged 18 and over, and who are travelling using a biometric or 'chipped' passport, an automated route through the UK Border. Those aged 12 to 18 years old, and who are accompanied by an adult, are also able to use them.

The gates use facial recognition technology to provide identity and security checks in a matter of seconds. The passenger's face is compared to the digital image recorded in their passport. Once complete the gate opens automatically to allow cleared passengers through the border. Border Force officers monitor the system and any travellers rejected by the gates are directed to the normal clearance desks to be seen by an officer.

Automated technology, such as ePassport gates, gives Border Force the ability to process a higher number of low risk passengers more quickly and using less resource. ePassport gates provide a faster route through the border while freeing up Border Force Officers to focus on other priority work such as cracking down on the smuggling of dangerous goods and identifying potential victims of trafficking.

Emma Moore, Chief Operating Officer of Border Force, said:

Increasing the use of digital technology at the border is part of Border Force's commitment to improve the passenger experience.

We must protect our borders, but we also want to encourage people who boost our economy through tourism and business to travel to the UK.

This means ensuring their arrival in the UK is dealt with as swiftly and efficiently as possible while maintaining the integrity and security of the UK's border.

Chief Executive of Edinburgh Airport Gordon Dewar said:

Edinburgh Airport is one of the most innovative in the UK and we are keen to use digital technology where we can to improve the passenger journey through our terminal.

We are Scotland's busiest airport handling more than 1.4 million passengers in July alone, and the introduction of these ePassport gates will mean visitors and returning passengers will enter into Scotland's capital safely and quickly.

ePassport gates not only benefit British and EEA travellers. Nationals from the USA, Canada, Australia, New Zealand and Japan who have successfully been accepted onto the Registered Traveller programme can now also use them.

[Registered Traveller allows regular travellers fast-tracked entry into the UK.](#) For a small fee, applicants undergo security checks in advance of travel meaning that, on arrival in the UK, they are able to use the EEA queues and eGates, bypassing queues for non-EEA passengers.

Airport staff are available to assist passengers using the new ePassport gates, while those without electronic passports and those from outside the EU will be able to proceed through manual desks as normal.

## [Press release: Latest large-scale government fire safety test result published](#)

These large scale tests will allow experts to better understand how different types of cladding panels behave with different types of insulation in a fire. The [results of the first 5 tests](#) have already been published.

This [additional test](#) was of a wall cladding system consisting of Aluminium Composite Material (ACM) cladding with a fire retardant polyethylene filler (category 2 in screening tests) with phenolic foam insulation.

The government's expert panel advises that the results show that the combination of materials used in the test does not meet current Building Regulations guidance.

Initial screening tests have identified 22 buildings over 18 metres tall in England known to have a combination of ACM with a fire retardant polyethylene filler with phenolic foam insulation. Cladding samples from each of these buildings had already failed earlier combustibility tests conducted by BRE and their owners were sent government advice detailing the immediate interim safety measures that needed to be completed. Appropriate measures have been put in place for all 22 of these buildings.

Government has also provided these building owners with additional [detailed advice](#) setting out the actions they need to take to ensure the safety of

residents going forward. Government is working closely with these building owners to ensure this advice is being followed.

The series of large-scale tests initially included 6 combinations of cladding systems. On 8 August 2017, the government announced that on the advice of the expert panel it would undertake a further large-scale test of ACM with fire retardant polyethylene filler (category 2 in screening tests) with phenolic foam insulation. This is to further build the evidence available for experts and building owners so they can make informed safety decisions.

Results of the final large-scale test (ACM with a limited combustibility filler with mineral wool insulation) – and consolidated advice to landlords based on all the 7 tests – will be published shortly.

The government announced an [independent review](#) of building regulations and fire safety on 28 July 2017. This forward looking review will examine the regulatory system around the design, construction and on-going management of buildings in relation to fire safety as well as related compliance and enforcement issues.

## [News story: The Secretary of State for Digital, Culture, Media and Sport Appoints Four New Members to the Board of UK Anti-Doping](#)

### **Dr Frances Akor**

Frances Akor is a Consultant Pharmacist at Imperial College Healthcare NHS Trust and a member of the General Pharmaceutical Council's Fitness to Practise and Investigating Committees. She was a member of the 2012 Olympic and Paralympic Pharmacy Clinical Services Group between 2009 and 2012. Frances has a PhD in Pharmacy Practice and Policy which focused on the practical implementation of NHS policy using anticoagulation as the therapy area of focus. Over the last fifteen years Frances has worked in academia, consultancy, pharmaceutical industry and the NHS. She will take up her appointment as Board member at UK Anti-Doping on 1st October 2017.

### **Nicholas Griffin QC**

Nicholas Griffin is a barrister with expertise in both criminal and public law. He has worked with the police and other agencies in relation to significant investigations and cases. He regularly appears in public inquiries covering a wide variety of issues, from allegations of widespread abuse to military and police action. Additionally, Nicholas conducts internal

investigations for institutions concerned about irregular activity and advices in relation to bribery, corruption and compliance matters. He will take up his appointment as Board member at UK Anti-Doping on 1st October 2017.

#### **Dr Claire-Marie Roberts**

Claire-Marie Roberts is a Chartered Psychologist, a Chartered Scientist, Senior Lecturer of Sport and Exercise Psychology and Co-programme Leader for the MSc in Sport and Exercise Psychology at the University of the West of England in Bristol. In addition to her academic work, Claire-Marie works as a sport psychology consultant to National Governing Bodies, professional sports teams, athletes, their parents, coaches and sport scientists. She has helped prepare a number of athletes and teams for international competitions including the Olympic, Paralympic and Commonwealth Games. Her role as a British Olympic Association sport psychology consultant at the London 2012 Olympics was to date, her career highlight. She will take up her appointment as Board member at UK Anti-Doping on 1st October 2017.

#### **Prof Nicola Phillips**

Nicola is an internationally registered Sports Physiotherapy specialist and a Professor at Cardiff University. She has worked extensively with both the Welsh and British teams at Olympic Games and Commonwealth Games for over 25 years. She is chef de mission for Wales's Commonwealth Games team for 2018 and President of the International Federation of Sports Physical Therapy 2011 – 2017. Nicola's main areas of both clinical and academic work are in rehabilitation of high performance athletes. Her publications also include logistical and ethical considerations for athlete support staff working at Major Games. She will take up her appointment as Board member at UK Anti-Doping on 1st October 2017.

These appointment have been made in accordance with the Cabinet Office's Governance Code on Public Appointments. The appointments process is regulated by the Commissioner for Public Appointments. Under the Code, any significant political activity undertaken by an appointee in the last five years must be declared. This is defined as including holding office, public speaking, making a recordable donation, or candidature for election. These individuals have declared no such political activity.

## **[Press release: Warning for anglers after illegal cast net seized](#)**

Anyone caught fishing with an illegal cast net in North East waters will be prosecuted, the Environment Agency has warned.

The warning follows the seizure of a cast net from an angler caught using it to catch salmon on the River Wear at Durham. The seizure was a first for the area and Environment Officers want it to stay that way.

Fisheries Enforcement Technical Specialist Kevin Summerson is leading the investigation against the angler. He said:

Even though these nets can be purchased from a number of UK outlets it is illegal to use them in North East rivers. Anyone caught and prosecuted could face a hefty fine and even a custodial sentence.

We take illegal fishing very seriously. Whether anglers use illegal equipment or fish without a licence, it's not fair on other anglers and endangers the future of the sport.

"Our work is intelligence led and we work closely with our partners at the police and Angling Trust to target known hot spots and where illegal fishing is reported to us.

We carry out enforcement work all year round and will be continuing throughout the coming weeks, including the upcoming Bank Holiday weekends. I'd urge people to help us protect the health of our fisheries by reporting any suspected illegal activity to us.

It is illegal to use cast nets to catch freshwater fish, eels, trout, migratory trout or salmon in the North East. They are also illegal if used to catch migratory trout, salmon or freshwater eels up to six nautical miles from the coast line.

The maximum penalty for this offence if convicted before a magistrate is an unlimited fine and/or three months in custody, or an unlimited fine and/or up to two years in custody before the crown court.

The Environment Agency works 24 hours a day to protect people and wildlife from pollution incidents and we encourage people to report such incidents to our Incident Hotline on 0800 807060.
