PDF, 80.9KB, 1 page

The fish counter at the Tees Barrage only monitors the upstream migration of salmon and sea trout through the fish pass.

Additional routes exist through the:

- main barrage gates
- canoe slalom
- turbine fish pass
- navigation lock

To help fish migrate, the Environment Agency and the Canal and River Trust keep the main barrage gate open as much as possible. When it's open, more fish migrate through this gate than through the fish pass. This may explain the lower fish counts when the main barrage gate is open.

# [Official Statistics: Population trends of UK bat species up to 2016](#)

The statistics comprise statistically robust population trends for 11 of the UK's 17 breeding bat species derived from data collected as part of the National Bat Monitoring Programme (NBMP). The NBMP relies on the ongoing efforts of hundreds of volunteer bat surveyors. Population trends are provided at GB level, and for England, Wales and Scotland where possible. Data contribute to UK and England Biodiversity indicators; are important in enabling the UK to meet its obligations under the Habitats Directive; and to report on, implement and deliver country biodiversity strategies, and report to EUROBATS.
