Scottish Secretary responds to September Labour Market Statistics

Press release

As the latest employment figures are published, Scottish Secretary Alister Jack says the UK Government will continue to do all it can to get the economy back on track.

Scottish Secretary Alister Jack said:

Today's labour market figures have encouraging signs and, as we recover from the pandemic, we will continue to do all we can to get people back into work, support businesses and see the economy flourish again.

Throughout the crisis the furlough scheme alone supported over 900,000 Scottish jobs and by the end of July this year, that figure was down to 116,000. People are getting back to work and our Plan For Jobs is aiding that process, while our Kickstart initiative is creating opportunities for young people.

The unprecedented success of the UK Government-funded vaccine rollout is allowing us to move forward from restrictive lockdown measures. The UK Government remains focused on recovery from the pandemic.

Background points:

- The UK Government's furlough and self-employed schemes will run till the end of September 2021. At their peak, these schemes supported more than 900,000 Scottish jobs.
- More than 100,000 Scottish businesses have benefitted from £4 billion of UK Government loans.
- The UK Government has provided billions in extra funding for the welfare system for those unable to access other forms of support. This includes the £20 Universal Credit uplift which will run until the end of September 2021.
- This direct support is on top of the additional £14.5 billion provided to the Scottish Government since the start of the pandemic.
- The UK Government is investing billions to help people of all ages back into work, including our £2 billion Kickstart scheme for young people, sector-based work programmes and recruitment of thousands of additional work coaches.
- The UK Government is funding the UK-wide vaccine programme, and continues to provide all Covid testing in Scotland outside of the NHS.

Figures from the Office for National Statistics (ONS) show that unemployment in Scotland fell to 4.3% between May and July, a 0.1% decrease from the previous quarter. The rate of employment in Scotland increased by 0.2% over the same period.

Most vulnerable to be offered COVID-19 booster vaccines from next week

- UK accepts advice from the independent JCVI on who to prioritise for a booster dose
- Further details on deployment to be set out in due course

Millions of vulnerable people are to be offered a COVID-19 booster vaccine from next week as the government confirms it has accepted the final advice from the independent Joint Committee on Vaccination and Immunisation (JCVI).

The programme will be rolled out to the same priority groups as previously. This means care home residents, health and social care workers, people aged over 50, those aged 16 to 49 years with underlying health conditions that put them at higher risk of severe COVID-19, adult carers, and adult household contacts of immunosuppressed individuals will be prioritised.

However, there will be flexibility in the programme, allowing all those eligible to receive their booster from 6 months after their second doses. This approach will allow more vulnerable people to be given their boosters quicker.

The move will ensure the protection vaccines provide for those most at risk of severe illness from COVID-19 will be maintained over the winter months. Data published by ONS yesterday shows people who have not been vaccinated account for around 99% of all deaths involving COVID-19 in England in the first half of this year. All 4 nations of the UK will follow the JCVI's advice.

Health and Social Care Secretary Sajid Javid said:

Our vaccine roll-out has been phenomenal. It's vital that we do everything we can to prolong the protection our vaccines offer, particularly for those most vulnerable to COVID-19 as we head into the autumn and winter months. I have today accepted the advice from the independent experts at the JCVI to offer a booster vaccine to those most at risk.

The booster programme will start next week thanks to the extensive preparations the NHS has already made to ensure booster jabs can be rolled out as quickly as possible.

I urge all those eligible to get their COVID-19 and flu vaccines as soon as they can, so you have the strongest possible protection

over the winter months.

Vaccinations will begin next week and the NHS will contact people directly to let them know when it is their turn to get their booster vaccine.

The JCVI has also advised that the flu and COVID-19 vaccines can be co-administered. The NHS will now consider where it's appropriate for co-administration to be used to support the roll-out of both programmes and where waiting to deliver one vaccine does not unduly delay administration of the other. It is important people take up the offer of both vaccines when they receive it, so people are encouraged to get both vaccinations as soon as possible rather than waiting for the possibility of getting them together.

People will be offered either a full dose of the Pfizer/BioNTech vaccine or a half dose of the Moderna vaccine, following scientific evidence showing that both provide a strong booster response. This will be regardless of which vaccine the individual previously had.

Where neither can be offered, for example for those who have an allergy to either vaccine, the JCVI advise that the Oxford/AstraZeneca vaccine can be used for those who received this vaccine for their first and second doses. The Oxford/AstraZeneca vaccine is safe, effective and has already saved thousands of lives in the UK and around the world.

NHS England will outline further details on deployment shortly. Plans for the roll-out will use the existing networks in place for the COVID-19 vaccination programme, including:

- local vaccination services co-ordinated by primary care networks and community pharmacies
- vaccination centres across the country, ensuring people can access a booster dose regardless of where they live

Following the JCVI's interim advice, the NHS wrote to providers on 1 July to ask them to start preparing for a potential booster programme. Local NHS organisations, in collaboration with local providers, local authorities and regional teams, have worked over the summer to ensure these preparations are in place.

NHS plans include ensuring there is capacity across community pharmacy, vaccination centres and general practice to deliver booster jabs, that the NHS has the workforce in place to deliver the programme and measures to maximise the use of the NHS Estate.

Flu vaccination remains a priority. It has been recommended for staff and vulnerable groups in the UK since the late 1960s, with the average number of estimated deaths in England for the 5 seasons 2015 to 2020 at over 11,000 deaths annually. During the 2019 to 2020 winter season, 86% of deaths associated with flu were people aged 65 and over.

The JCVI advice has taken into account data from the government-funded COV-Boost clinical trial, looking at the impact of a booster dose of each vaccine

on people's immune systems, as well as ComFluCOV, which is investigating co-administration of the flu and COVID-19 vaccines.

The latest data from Public Health England and Cambridge University shows vaccines have saved more than 112,300 lives and prevented 143,600 hospitalisations and 24 million cases in England.

Yesterday, the government announced that [people aged 12 to 15 in England would be offered one dose of the Pfizer/BioNTech COVID-19 vaccine](#) from next week, following advice from the 4 UK chief medical officers.

Over 4 in 5 adults across the UK have received both COVID-19 vaccine doses, and over half of all 16 and 17 year olds have already come forward for their first jab.

A total of 44,108,746 people have received 2 doses (89.2%) and 48,458,700 people have received one dose (81.2%).
