

Contractor fined after employee falls from scaffolding

A shopfitting company has been fined after an employee suffered multiple fractures after falling fifteen feet from scaffolding.

Manchester Magistrates Court heard how on the 24 October 2019, an employee of TA Knox Shopfitters Ltd was working from a tower scaffold at the front of the Footasylum Store in the Trafford Centre, Manchester, when the scaffold moved throwing him off balance. He fell backwards against the safety rail of the scaffold, which gave way and he fell fifteen feet to the ground. The employee suffered ten fractured ribs, a fractured shoulder and a collapsed lung.

An investigation by the Health and Safety Executive (HSE) found that the safety rail had not been fixed in place correctly, causing it to give way when the employee fell against it. It also found that the tower scaffold had not been erected by somebody with the appropriate skills, knowledge and training. If the edge protection been suitable and sufficient and the tower constructed by somebody competent to erect tower scaffolds, the incident could have been prevented.

TA Knox Shopfitters Ltd of Hollingworth Road, Bredbury, Stockport pleaded guilty to breaching Section 2(1) of the Health and Safety at Work etc. Act 1974. The company was fined £18,000 and ordered to pay costs of £4,623.

Speaking after the hearing, HSE inspector Seve Gomez-Aspron said: "Falls from height remain one of the most common causes of work-related fatalities and severe injuries in this country. The risks associated with work at height are well known. This incident could so easily have been avoided by ensuring that suitable and sufficient edge protection had been used and qualified people had been on site to erect a tower scaffold."

Doncaster engineering company fined after worker diagnosed with occupational asthma

Lantern Engineering Ltd was sentenced for health breaches after workers were exposed to metal working fluid (MWF). MWF is hazardous to health, and exposure can cause health conditions including irritation of the skin/dermatitis, occupational asthma, bronchitis and irritation of the upper respiratory tract.

Sheffield Magistrates' Court heard that, in February 2016 a visit was conducted by the Health and Safety Executive (HSE) and enforcement taken requiring the company to provide health surveillance and manage MWF. In September 2016 an employee was diagnosed with occupational asthma. Further enforcement was taken in December 2016 with an Improvement Notice issued to develop a system for managing MWF.

An investigation by HSE found that a water mix MWF was in use in the majority of machines including saws, machine centres and milling machines. None of these machines had local exhaust ventilation (LEV) and some door seals were observed to be in poor condition. The MWF sumps to some machines were in visibly poor condition, with fines, swarf and/or tramp oil being present.

Lantern Engineering Ltd of Globe Court, Denby, Doncaster South Yorkshire pleaded guilty to breaching Section 2 (1) of the Health & Safety at Work etc Act 1974. The company has been fined £15,000 and ordered to pay £7,500 in costs.

After the hearing, HSE inspector Laura Hunter commented: "The company's failure to manage MWF exposed employees to risk.

"Companies should be aware that HSE will not hesitate to take appropriate enforcement action against those that fall below the required standards".

[Self-builder receives suspended prison sentence after worker suffers fatal injuries](#)

A man building a detached property for himself and his family has been fined after a roofer fell whilst working on the roof, sustaining serious injuries from which he later died.

Manchester Magistrates Court heard how Tony Geldart, a 63-year-old father of two, was employed by Roy Staunton to carry out roof work on his self-build detached domestic property in Hale, Greater Manchester. On 18 July 2017, Mr Geldart fell 2.6 metres from the roof which had no fall protection measures in place. He sustained serious neck & head injuries from which he died three days later in hospital.

An investigation by the Health & Safety Executive (HSE) found that Roy Staunton was responsible for removing some of the scaffolding himself despite not being competent to do so. He did not replace any means of fall protection and failed to ensure that working from height was carried out in a safe manner.

Mr Roy Staunton of Egerton Drive, Hale, Greater Manchester pleaded guilty to breaching of Regulation 4 (1) of the Working at Height Regulations 2005 and was sentenced to eight months imprisonment suspended for two years and ordered to pay costs of £16,529.46

After the hearing HSE inspector Phil Redman said: "Falls from height remain one of the most common causes of work-related fatalities in this country and the risks associated with working at height are well known. This tragic incident was preventable by having suitable fall protection in place"

[Kitchen manufacturing company fined after worker injured by machinery](#)

Kitchen manufacturing company Omega PLC were sentenced for safety breaches after a worker severely injured their finger in unguarded machinery.

Sheffield Magistrates' Court heard that on 8 May 2018, the worker was processing wood panels on an edge-banding machine at a kitchen unit manufacturing factory in Doncaster. A panel became stuck in the process. When the worker accessed the inner part of the machine to clear the blockage, his hand entered the milling block area, which caused a severe laceration to the middle finger on the left hand resulting in amputation.

An investigation by the Health and Safety Executive (HSE) found that the machine was inadequately guarded at the front. It found that employees would climb onto the machine bed from the unguarded front and were able to access the area of danger when carrying out activities such as routine maintenance and to clear blockages.

Omega PLC of Omega Boulevard, Capitol Park, Thorne, Doncaster pleaded guilty to breaching Regulation 11 (1) of the Provision and Use of Work Equipment Regulations 1998. The company were fined £50,000 and ordered to pay £6,000 in costs.

Speaking after the hearing, HSE inspector Anuja Mistry-Raval said: "Employers should make sure they properly assess and apply effective control measures to minimise the risk from dangerous parts of machinery.

"This incident could so easily have been avoided by implementing correct control measures and ensuring that safe working practices were followed."

Company fined after employee's hand injured in machinery

Harbro Limited has been fined after an employee's hand became entangled in a 'Superbruiser' mixing machine.

Banff Sheriff Court heard that on 2 November 2018, at Harbro's Rosehall Depot, Turriff, Aberdeenshire, an employee put his right arm through the inspection hatch of the Superbruiser to feel along the edge of the rotating roller for embedded metal. The glove came off his hand which was caught between two rollers. The employee sustained crush injuries to his second, third and fourth fingers. Consequently, his middle finger was partially amputated and he was unable to work for approximately two and a half months.

An investigation by the Health and Safety Executive (HSE) found that Harbro Limited had failed to provide fixed or moveable guarding on the inspection hatch of the Superbruiser. This would have significantly reduced the risk of a machine operator reaching into the machine while the rollers were rotating.

Harbro Limited of 1 Markethill Road, Turriff AB53 4PA, pleaded guilty to breaching The Provision and Use of Work Equipment Regulations 1998, Regulations 11(1) and (2) and the Health and Safety at Work etc. Act 1974, Section 33(1)(c) and was fined a total of £12,000.

After the hearing, HSE inspector, Simon Dunford said: "This injury was easily preventable and the risk should have been identified.

"Employers should make sure they properly assess and apply effective control measures to minimise the risk from dangerous parts of machinery. The risks of undertaking such work are well known in the industry and it is disappointing that a safe system of work was not followed in this case."
