

[Manufacturing company fined after worker fatally injured](#)

IFG Drake Ltd has been fined after a worker suffered fatal crush injuries whilst working on a machine at the site in Huddersfield.

Leeds Crown Court heard how, on 24 March 2017, Mr Javeed Ghaffar, was working on the stretch godet section of a synthetic fibre manufacturing machine at Victoria Mills, Victoria Lane, Huddersfield. He became entangled in the machine when he was performing a task of removing a lap from around the rollers. A lap occurs when fibres stick to the rollers of the machine and begin to wrap around them.

An investigation by the Health and Safety Executive (HSE) found that the machine was not adequately guarded. It had become custom and practice for employees to reach around the inadequate guarding in place to deal with problems of this nature

IFG Drake Ltd of Old Mills, Drighlington, Bradford pleaded guilty to breaching Section 2 (1) of the Health & Safety at Work etc Act 1974. The company was fined £366,850 and ordered to pay £23,993 in costs.

After the hearing, HSE inspector John Boyle commented: "This was a tragic and wholly avoidable incident, caused by the failure of the company to provide adequate guarding against dangerous parts of the machine.

"Companies should be aware that HSE will not hesitate to take appropriate enforcement action against those that fall below the required standards"

[Construction company fined after crush injury to employee](#)

A construction company has been fined after a worker was seriously injured while erecting a timber frame chalet bungalow.

Chelmsford Crown Court heard that in July 2017, a worker was seriously injured when roof trusses toppled over while being moved by crane at a site in East Mersea, Essex.

An investigation by the Health and Safety Executive (HSE) found that

scaffolding was not installed around and within the building to enable workers to have a safe area of work. Lifting the roof trusses in packs created risks which were not sufficiently managed. The company and company owner had failed to plan, manage and monitor the work under their control.

JWB (Mersea) Ltd of Westwood Drive, West Mersea, Colchester, pleaded guilty to breaching Regulation 13(1) of The Construction (Design and Management) Regulations 2015. The company was fined £1,000.

Company director and owner, Jason Whiting, of the same address, pleaded guilty to breaching Section 37(1) of the Health and Safety at Work etc Act 1974. He received a six-month custodial sentence, suspended for 24 months. He was required to do 240 hours of unpaid work. HSE was awarded full costs of £25,627.32.

Speaking after the hearing, HSE inspector David King, said: "Lifting the roof trusses individually and securing them permanently could have prevented this accident. HSE is keen to increase awareness of the need to plan, manage and monitor construction work and ensure the health and safety of construction workers. HSE will take enforcement action if companies do not manage health and safety on their sites, including directors."

[HSE to prosecute Lightwater Valley Attractions](#)

The Health and Safety Executive (HSE) has informed Lightwater Valley Attractions Ltd that it will be prosecuted after a seven-year-old boy was ejected from a Twister ride at its theme park in North Stainley, Ripon on 30

May 2019.

Following the investigation by HSE, Lightwater Valley Attractions Ltd, of Sherborne, Dorset, will face a charge under Section 3(1) of the Health and Safety at Work etc. Act 1974.

HSE is currently liaising with Leeds Magistrates' Court to fix a first hearing date.

ENDS

[Oil company fined £1.2m after two workers suffer multiple burn injuries](#)

Oil refinery company, Phillips 66 Ltd was sentenced for safety breaches after two workers in North Lincolnshire suffered life-changing injuries from an uncontrolled release of high pressure and high temperature steam.

Grimsby Crown Court heard that on 30 October 2013, the two workers – one an employee of Phillips 66 Limited, the other an apprentice – were re-assembling high pressure steam pipework following maintenance of a steam turbine driven pump. During the process, they were exposed to an uncontrolled release of high pressure, high temperature steam of around 250°C. The uncontrolled release resulted in the 53-year-old employee receiving burns to his lower back and legs, and the 20-year-old apprentice receiving extremely serious burns to his torso, chest, arms and legs. At the time of the incident, these injuries were life threatening.

An investigation by the Health and Safety Executive (HSE) found a series of

failures with Phillips 66 Limited's 'safe system of work procedure' which the workers adhered to. A number of personnel involved in the implementation of the company's safe isolation procedure of the steam system had failed to complete all the required checks and verifications to reduce the associated risks.

Phillips 66 Ltd of Aldergate Street, London pleaded guilty to breaching Sections 2(1) and 3(1) of the Health & Safety at Work etc Act 1974. The company has been fined £1.2 million and ordered to pay £20,450.05 in costs.

After the hearing, HSE inspector, Jarrod King commented: "Safe systems of work procedures are in place to ensure the health and safety of workers. Companies should ensure that all relevant employees and personnel who are involved in their operation and execution are suitably trained and competent to complete their roles within the system.

"Where a significant risk gap leads to an incident which results in injury to workers, HSE will take the appropriate enforcement action irrespective of the size of the organisation."

[Company fined £1.1m after worker injured in fall from height](#)

A London-based relocation and refurbishment company has been fined after a worker was seriously injured when he fell from height.

Luton Crown Court heard that, on 5 September 2016, an engineer was testing a sprinkler system for leaks at a site in Hemel Hempstead. He climbed onto an internal roof and was inspecting the leak from an extension ladder. The ladder slipped away from him and he fell almost three meters into the gap between the internal roof and the external wall. The worker suffered severe

blood loss, amounting around half of his bloodstream. He required a blood transfusion and needed 14 stitches to his head. He also sustained fractured vertebrae and suffered soft tissue damage.

An investigation by the Health and Safety Executive (HSE) found that reasonably practicable measures had not been taken to prevent a fall from the internal roof for both the engineer and other contractors working on the roof. The investigation found that Modus Workspace Limited, the principal contractor, had failed to discharge its duty to ensure those not in their employment were not exposed to risks, in particular that of falling from height.

Modus Workspace Limited of Greencoat Place, London was found guilty to breaching Section 3 (1) of the Health and Safety at Work etc. Act 1974 and, after a five-week trial.,The company was fined £1.1 million and ordered to pay costs of £68,116.18.After the sentencing, HSE Inspector John Berezansky, commented: "This case highlights the importance of taking reasonably practicable measures when planning and managing the risks regarding work at height within the construction industry.

"Falls from height remain one of the most common causes of work-related fatalities and injuries in this country and the risks and control measures associated with working at height are well known.

"The engineer's injuries were life changing and he could have easily been killed. This serious incident and devastation could have been avoided if basic safety measures had been put in place."
