

[The Art of Timber Engineering](#)

In the wake of the great storm which has hit our ancient woodlands within our land holdings, we look to the future and the true and exciting potential for the manufacture of timber products, utilising the vast resource of incredible timber that is now available to us. We will address any requirements and enquiries with artistic enthusiasm.

[Nature & Technology](#)

As has been part of our practise for many years, **welters**[®] focus with determination to embrace nature, and the environment, in our products and philosophies. This is achieved through the use of UK resources and facilities and includes the use of reconstituted materials within our manufacturing processes. We endeavour to maintain our 'Made in Britain' ethos and develop product designs

that are in keeping with our natural habitat.

welters® has always attempted to minimise imports, especially of non-environmentally friendly material, and particularly when exported from the opposite side of the globe and produced by nations which may pay less attention to environmental issues. **Welterstone** was created as a solution to this issue, producing products manufactured locally from indigenous quarried material. As a result of the success of **Welterstone**, **welters®** has not imported any material for several years.

We look forward to the continuation of the development of our range of products and materials and embrace the future wholeheartedly.

[Environmental Orbs](#)

Environmental stone orbs with a natural covering of mosses and ferns. Examples of variable sizes and specifications. A clear mission statement

showing our commitment
to working with nature in all our product design and installation concepts.

[Welters Orbs & Boulders](#)

Made in Britain and manufactured using locally sourced, environmentally sympathetic materials. They can transform any landscape, be it woodland walkways, private gardens or curtilages, along the banks of a stream or as use as sea and flood defences. The suitable locations and uses are endless. The orbs have a cavity which can be used to inter cremated remains or to house keepsakes. Or simply used as a memorial or marker. They are faced with a tablet manufactured from a selection of materials and can be inscribed for prosperity. Adding to the range is the imminent release of the Burr Orb System – transforming manufacturing reuse with resolve to global environmental solutions.

[Made in Britain](#)

Some say time now for change – is this an obvious joke?

We have been shouting advocacy for the last 30 years over the British essential need to utilise all native and national resource in the ingenious use and encouragement of resource culture in opposition to the sloppy desire to require and use imported product which will eventually prove catastrophic.

Pursual of this principal will also be the final 'nail in the coffin' of all logical procedure and thought process.

Attention should have, and must now, be given and joyfully pursued in all aspects of self-sufficiency. Basic food, energy and lifestyle, linked with material usage and employment are all key elements to a satisfactory planetary compliance.

Let us stop immediately 'the tail wagging the dog'.

Welters continues to ensure that the British environmental solution works successfully amidst the myriad of doubters and vested interest opponents that muster the negative lobbyist.

Welters environmental product installed and today's happy heron at welters natural parkland where for some, the sun shines with clarity.
