Beijing plans to take new measures to better manage household garbage.

The city management committee, which was set up in 2016, will combine the previously separate systems of recycling household garbage and recyclable resources this year, in order to better sort and recycle garbage.

Citizens used to sell their reusable garbage and throw away other household garbage directly in their neighborhoods, often resulting in a mixture of all garbage in the community. With the new measures set to be introduced this year, residential garbage will be sorted at the beginning and the recycling work will be improved.

At a trial site of the city's Chaoyang District, residents are encouraged to sort and sell their kitchen waste and recyclable garbage to a recycling company which will give them daily necessities or services in return. The garbage is then either sent to the city's sanitation unit for further disposal or to companies that can reuse garbage as resources.
