

# CFS announces food safety report for November

The Centre for Food Safety (CFS) of the Food and Environmental Hygiene Department today (December 31) released the findings of its food safety report for last month. The results of about 8 600 food samples tested were found to be satisfactory except for six unsatisfactory samples which were announced earlier. The overall satisfactory rate was 99.9 per cent.

A CFS spokesman said about 2 400 food samples were collected for microbiological tests, and about 6 200 samples were taken for chemical and radiation level tests.

The microbiological tests covered pathogens and hygiene indicators; the chemical tests included testing for pesticides, preservatives, metallic contaminants, colouring matters, veterinary drug residues and others; and the radiation level tests included testing for radioactive caesium and iodine in samples collected from imported food from different regions.

The samples comprised about 3 300 samples of vegetables and fruit and their products; about 500 samples of cereals, grains and their products; about 1 000 samples of meat and poultry and their products; about 900 samples of milk, milk products and frozen confections; about 1 000 samples of aquatic and related products; and about 1 900 samples of other food commodities (including beverages, bakery products and snacks).

The six unsatisfactory samples comprised an imported sweet potato sample, an imported crab sample and an imported cooked barley sample with excessive metallic contaminants; a fresh beef sample found with sulphur dioxide; a grilled eel sample found with malachite green, and an imported frozen confection sample detected with total bacterial counts exceeding the legal limit.

The CFS has taken follow-up actions on the above-mentioned unsatisfactory samples including informing the vendors concerned of the test results, instructing them to stop selling the affected food items, and tracing the sources of the food items in question.

The spokesman reminded the food trade to ensure that food is fit for human consumption and meets legal requirements. Consumers should patronise reliable shops when buying food and maintain a balanced diet to minimise food risks.

Separately, in response to the Japanese Government's discharge of nuclear-contaminated water at the Fukushima Nuclear Power Station, the CFS will continue enhancing the testing on imported Japanese food, and make reference to the risk assessment results to adjust relevant surveillance work in a timely manner. The CFS will announce every working day on its dedicated webpage

([www.cfs.gov.hk/english/programme/programme\\_rafs/daily\\_japan\\_nuclear\\_incidents.html](http://www.cfs.gov.hk/english/programme/programme_rafs/daily_japan_nuclear_incidents.html)) the radiological test results of the samples of food imported from Japan, with a view to enabling the trade and members of the public to have a better grasp of the latest safety information.
