

## CHP announces no new local confirmed cases of COVID-19 today

The Centre for Health Protection (CHP) of the Department of Health has announced that as of 4pm today (May 28), no new local confirmed cases of coronavirus disease 2019 (COVID-19) had been recorded, and that the number of cases in Hong Kong remained at 1 067 so far (comprising 1 066 confirmed cases and one probable case).

Meanwhile, the CHP is investigating an overseas case. The case involves a 66-year-old female patient who travelled to Spain from March 2 to May 20 and the United Kingdom from May 20 to 26. She travelled from London to Amsterdam for transit and arrived in Hong Kong on May 27 on flight KL887 (economy class) by KLM Royal Dutch Airlines. According to the patient, she developed malaise and loss of smell and taste on March 26 and had received a test of which the result was positive for Severe Acute Respiratory Syndrome Coronavirus 2 (SARS-CoV-2) in Spain on March 28. Upon arrival in Hong Kong, she was transferred directly from Hong Kong International Airport to North Lantau Hospital and subsequently admitted to Princess Margaret Hospital for management. Her respiratory specimen tested positive for SARS-CoV-2. She is currently in a stable condition. The CHP has contacted the health authority in Spain to obtain more information about the case.

The CHP again urged members of the public to maintain an appropriate social distance with other people as far as possible in their daily lives to minimise the risk of infection. In particular, they should go out less and avoid social activities such as meal gatherings or other gatherings to reduce the chance of contacting infected persons who may not present any symptoms, and minimise the risk of outbreak clusters emerging in the community.

A spokesman for the CHP said, "Given that the situation of COVID-19 infection remains severe and that there is a continuous increase in the number of cases reported around the world, members of the public are strongly urged to avoid all non-essential travel outside Hong Kong.

"The CHP also strongly urges the public to maintain at all times strict personal and environmental hygiene, which is key to personal protection against infection and prevention of the spread of the disease in the community. On a personal level, members of the public should wear a surgical mask when having respiratory symptoms, taking public transport or staying in crowded places. They should also perform hand hygiene frequently, especially before touching the mouth, nose or eyes.

"As for household environmental hygiene, members of the public are advised to maintain drainage pipes properly, regularly pour water into drain outlets (U-traps) and cover all floor drain outlets when they are not in use. After using the toilet, they should put the toilet lid down before flushing to avoid spreading germs."

Moreover, the Government has launched the website "COVID-19 Thematic Website" ([www.coronavirus.gov.hk](http://www.coronavirus.gov.hk)) for announcing the latest updates on various news on the COVID-19 infection and health advice to help the public understand the latest updates. Members of the public may also gain access to information via the COVID-19 WhatsApp Helpline launched by the Office of the Government Chief Information Officer. Simply by saving 9617 1823 in their phone contacts or clicking the link [wa.me/85296171823?text=hi](https://wa.me/85296171823?text=hi), they will be able to obtain information on COVID-19 as well as the "StayHomeSafe" mobile app and wristband via WhatsApp.

To prevent pneumonia and respiratory tract infection, members of the public should always maintain good personal and environmental hygiene. They are advised to:

- Wear a surgical mask when taking public transport or staying in crowded places. It is important to wear a mask properly, including performing hand hygiene before wearing and after removing a mask;
- Perform hand hygiene frequently, especially before touching the mouth, nose or eyes, after touching public installations such as handrails or doorknobs, or when hands are contaminated by respiratory secretions after coughing or sneezing;
- Maintain drainage pipes properly and regularly (about once a week) pour about half a litre of water into each drain outlet (U-trap) to ensure environmental hygiene;
- Cover all floor drain outlets when they are not in use;
- After using the toilet, put the toilet lid down before flushing to avoid spreading germs;
- Wash hands with liquid soap and water, and rub for at least 20 seconds. Then rinse with water and dry with a disposable paper towel. If hand washing facilities are not available, or when hands are not visibly soiled, performing hand hygiene with 70 to 80 per cent alcohol-based handrub is an effective alternative;
- Cover your mouth and nose with tissue paper when sneezing or coughing. Dispose of soiled tissues into a lidded rubbish bin, then wash hands thoroughly; and
- When having respiratory symptoms, wear a surgical mask, refrain from work or attending class at school, avoid going to crowded places and seek medical advice promptly.
