

## CHP investigates 28 additional confirmed cases of COVID-19

The Centre for Health Protection (CHP) of the Department of Health has announced that as of 4pm today (July 1), the CHP was investigating 28 additional confirmed cases of coronavirus disease 2019 (COVID-19), taking the number of cases to 1 234 in Hong Kong so far (comprising 1 233 confirmed cases and one probable case).

The newly reported cases announced today involve 12 males and 16 females aged between 3 and 46. Except case 1 233, all had a travel history during the incubation period.

For the 1 233th case, it involves a 46-year-old female with good past health, who is the wife of the 59-year-old male patient of the 1 205th case and the mother of the 19-year-old male patient of the 1 206th case confirmed yesterday (June 30). They all lived in Mei Sau House, Mei Tin Estate, Tai Wai. She developed symptoms and was admitted to Prince of Wales Hospital for isolation upon confirmation of cases 1 205 and 1 206 yesterday, and was subsequently tested positive for severe acute respiratory syndrome coronavirus 2.

The patient had no travel history. She is a household close contact of cases 1 205 and 1 206. According to the CHP's initial epidemiological investigation, the patient possibly has acquired the infection from her husband and son through home contact. The case is classified as epidemiologically linked with imported cases.

The patient developed fever, malaise and cough on June 26 and sought medical advice from a private practitioner in Lam Tin on the same day. She had also visited some vegetables and meat stalls near Tai Wai Market and a supermarket in Mei Tin Estate before admission to hospital. As a precautionary measure for early detection of possible transmission into the community, the CHP has arranged with Housing Department to distribute deep throat saliva specimens bottles to residents of Mei Sau House starting today. The CHP will also distribute specimen bottles to staff of the premises the patient visited during the infectious period. The CHP appeals to residents of Mei Sau House and related persons return their samples to the CHP as soon as possible for early testing and to seek medical attention early if develop symptoms.

The CHP's epidemiological investigations and relevant contact tracing on the confirmed cases are ongoing. For case details and contact tracing information, please see the Annex.

The CHP again urged members of the public to maintain an appropriate social distance with other people as far as possible in their daily lives to minimise the risk of infection. In particular, they should go out less and

avoid social activities such as meal gatherings or other gatherings to reduce the chance of contacting infected persons who may not present any symptoms, and minimise the risk of outbreak clusters emerging in the community.

A spokesman for the CHP said, "Given that the situation of COVID-19 infection remains severe and that there is a continuous increase in the number of cases reported around the world, members of the public are strongly urged to avoid all non-essential travel outside Hong Kong.

"The CHP also strongly urges the public to maintain at all times strict personal and environmental hygiene, which is key to personal protection against infection and prevention of the spread of the disease in the community. On a personal level, members of the public should wear a surgical mask when having respiratory symptoms, taking public transport or staying in crowded places. They should also perform hand hygiene frequently, especially before touching the mouth, nose or eyes.

"As for household environmental hygiene, members of the public are advised to maintain drainage pipes properly, regularly pour water into drain outlets (U-traps) and cover all floor drain outlets when they are not in use. After using the toilet, they should put the toilet lid down before flushing to avoid spreading germs."

Moreover, the Government has launched the website "COVID-19 Thematic Website" ([www.coronavirus.gov.hk](http://www.coronavirus.gov.hk)) for announcing the latest updates on various news on COVID-19 infection and health advice to help the public understand the latest updates. Members of the public may also gain access to information via the COVID-19 WhatsApp Helpline launched by the Office of the Government Chief Information Officer. Simply by saving 9617 1823 in their phone contacts or clicking the link [wa.me/85296171823?text=hi](https://wa.me/85296171823?text=hi), they will be able to obtain information on COVID-19 as well as the "StayHomeSafe" mobile app and wristband via WhatsApp.

To prevent pneumonia and respiratory tract infection, members of the public should always maintain good personal and environmental hygiene. They are advised to:

- Wear a surgical mask when taking public transport or staying in crowded places. It is important to wear a mask properly, including performing hand hygiene before wearing and after removing a mask;
- Perform hand hygiene frequently, especially before touching the mouth, nose or eyes, after touching public installations such as handrails or doorknobs, or when hands are contaminated by respiratory secretions after coughing or sneezing;
- Maintain drainage pipes properly and regularly (about once a week) pour about half a litre of water into each drain outlet (U-trap) to ensure environmental hygiene;
- Cover all floor drain outlets when they are not in use;
- After using the toilet, put the toilet lid down before flushing to avoid spreading germs;
- Wash hands with liquid soap and water, and rub for at least 20 seconds.

Then rinse with water and dry with a disposable paper towel. If hand washing facilities are not available, or when hands are not visibly soiled, performing hand hygiene with 70 to 80 per cent alcohol-based handrub is an effective alternative;

- Cover your mouth and nose with tissue paper when sneezing or coughing.

Dispose of soiled tissues into a lidded rubbish bin, then wash hands thoroughly; and

- When having respiratory symptoms, wear a surgical mask, refrain from work or attending class at school, avoid going to crowded places and seek medical advice promptly.
