

CHP investigates 48 confirmed and 52 asymptomatic additional SARS-CoV-2 virus cases with 20 cases pending status by nucleic acid tests as well as 163 cases tested positive by rapid antigen tests (with photo)

The Centre for Health Protection (CHP) of the Department of Health (DH) today (May 2) announced the latest epidemic situation of COVID-19. As of 0.00am, May 2, the CHP was investigating 120 additional cases that tested positive for the SARS-CoV-2 virus by nucleic acid tests (48 confirmed cases, 52 asymptomatic cases and 20 cases with pending case status) in the past 24 hours. Separately, 163 additional positive cases through rapid antigen tests (RATs) (95 symptomatic cases and 68 asymptomatic cases) were reported. Hong Kong has recorded a total of 758 780 and 446 013 cases that have tested positive by nucleic acid tests and RATs respectively for the SARS-CoV-2 virus so far.

The aforementioned newly reported cases consist of 11 imported cases (eight cases and three cases tested positive by nucleic acid tests and RATs respectively). The CHP is continuing with epidemiological investigations on the cases. Please refer to the "COVID-19 Thematic Website" (www.coronavirus.gov.hk) for more information.

In addition, as of 0.00am, May 2, a total of 9 105 death cases that had tested positive for the SARS-CoV-2 virus during the fifth wave (since December 31, 2021) were recorded, with 9 031 and 71 deaths reported from the Hospital Authority and public mortuaries respectively as well as three deaths reported from the Chinese University of Hong Kong Medical Centre. Hong Kong has so far recorded a total of 9 318 death cases that have tested positive for the SARS-CoV-2 virus.

Furthermore, among the earlier cases by nucleic acid tests reported, there were cases (including pending cases) changed to confirmed, asymptomatic or re-positive cases. As at yesterday (May 1), the total number of confirmed cases was 330 725, while the figures for asymptomatic cases, re-positive cases and pending/unknown cases recorded since January 1 were 196 921, 22 and 230 992 respectively.

The spokesman for the CHP stressed that as the local situation of COVID-19 infection is still severe, the CHP strongly appeals to the community to continue to comply with social distancing measures, avoid going out and refrain from participating in unnecessary or crowded activities or gatherings. This would lower the risk of infection and prevent the virus from

spreading in the community.

The spokesman reminded that COVID-19 vaccines are highly effective in preventing severe cases and deaths from the SARS-CoV-2 virus. They can provide effective protection to those vaccinated in preventing serious complications and even death after infection. People who have yet to receive vaccination, especially senior citizens, chronic patients and other immunocompromised persons who face a higher chance of death after COVID-19 infection, should get vaccinated as early as possible for self-protection and to reduce the risk of falling seriously ill and death should they get infected.
