

# CHP investigates 62 additional confirmed cases of COVID-19

The Centre for Health Protection (CHP) of the Department of Health has announced that as of 0.00am, August 12, the CHP was investigating 62 additional confirmed cases of coronavirus disease 2019 (COVID-19), taking the number of cases to 4 244 in Hong Kong so far (comprising 4 243 confirmed cases and one probable case).

Among the newly reported cases announced, one had a travel history during the incubation period.

The CHP's epidemiological investigations and relevant contact tracing on the confirmed cases are ongoing. For case details and contact tracing information, please see the Annex or the list of buildings with confirmed cases of COVID-19 in the past 14 days and the latest local situation of COVID-19 available on the website "COVID-19 Thematic Website" ([www.coronavirus.gov.hk](http://www.coronavirus.gov.hk)).

The CHP has been closely monitoring the usage and demand of various quarantine centres (QCs). The Scientific Committee on Emerging and Zoonotic Diseases and the Scientific Committee on Infection Control under the CHP earlier made a recommendation that confinees at QCs would be quarantined for the first 10 days and be put under home quarantine for the remaining four days when necessary. As the number of confirmed cases and close contacts remains at a high level recently, it is anticipated that the usage of quarantine facilities will continue increasing. Starting from today, the CHP will reactivate this quarantine arrangement in various QCs by phases, to ensure that there are adequate quarantine facilities to cope with the epidemic situation.

The CHP stressed that all confinees under quarantine at QCs are asymptomatic. After the implementation of the above arrangement, only if confinees have passed assessments on their health conditions and other relevant factors such as their home environments by healthcare professionals, will they be considered appropriate to be put under home quarantine for the remaining four days. The confinees will have tested negative for COVID-19 before discharge from QCs before such an arrangement could be made. QC staff members will also arrange monitoring wristbands for these confinees to ensure they comply with the home quarantine requirement before they are discharged from QCs.

In view of the severe epidemic situation, the CHP called on members of the public to avoid going out, having social contact and dining out. They should put on a surgical mask and maintain stringent hand hygiene when they need to go out. As a number of recent cases involve elderly people, the CHP strongly urged the elderly to stay home as far as possible and avoid going out. They should consider asking their family and friends to help with

everyday tasks such as shopping for basic necessities.

A spokesman for the CHP said, "Given that the situation of COVID-19 infection remains severe and that there is a continuous increase in the number of cases reported around the world, members of the public are strongly urged to avoid all non-essential travel outside Hong Kong.

"The CHP also strongly urges the public to maintain at all times strict personal and environmental hygiene, which is key to personal protection against infection and prevention of the spread of the disease in the community. On a personal level, members of the public should wear a surgical mask when having respiratory symptoms, taking public transport or staying in crowded places. They should also perform hand hygiene frequently, especially before touching the mouth, nose or eyes.

"As for household environmental hygiene, members of the public are advised to maintain drainage pipes properly, regularly pour water into drain outlets (U-traps) and cover all floor drain outlets when they are not in use. After using the toilet, they should put the toilet lid down before flushing to avoid spreading germs."

Moreover, the Government has launched the website "COVID-19 Thematic Website" ([www.coronavirus.gov.hk](http://www.coronavirus.gov.hk)) for announcing the latest updates on various news on COVID-19 infections and health advice to help the public understand the latest updates. Members of the public may also gain access to information via the COVID-19 WhatsApp Helpline launched by the Office of the Government Chief Information Officer. Simply by saving 9617 1823 in their phone contacts or clicking the link [wa.me/85296171823?text=hi](https://wa.me/85296171823?text=hi), they will be able to obtain information on COVID-19 as well as the "StayHomeSafe" mobile app and wristband via WhatsApp.

To prevent pneumonia and respiratory tract infections, members of the public should always maintain good personal and environmental hygiene. They are advised to:

- Wear a surgical mask when taking public transport or staying in crowded places. It is important to wear a mask properly, including performing hand hygiene before wearing and after removing a mask;
- Perform hand hygiene frequently, especially before touching the mouth, nose or eyes, after touching public installations such as handrails or doorknobs, or when hands are contaminated by respiratory secretions after coughing or sneezing;
- Maintain drainage pipes properly and regularly (about once a week) pour about half a litre of water into each drain outlet (U-trap) to ensure environmental hygiene;
- Cover all floor drain outlets when they are not in use;
- After using the toilet, put the toilet lid down before flushing to avoid spreading germs;
- Wash hands with liquid soap and water, and rub for at least 20 seconds. Then rinse with water and dry with a disposable paper towel. If hand washing facilities are not available, or when hands are not visibly soiled, performing hand hygiene with 70 to 80 per cent alcohol-based handrub is an

effective alternative;

- Cover your mouth and nose with tissue paper when sneezing or coughing. Dispose of soiled tissues into a lidded rubbish bin, then wash hands thoroughly; and

- When having respiratory symptoms, wear a surgical mask, refrain from work or attending class at school, avoid going to crowded places and seek medical advice promptly.
