

CHP investigates locally acquired SARS-CoV-2 virus cases with 1 385 cases tested positive by nucleic acid tests and 4 723 cases by RATs as well as 467 imported cases

The Centre for Health Protection (CHP) of the Department of Health (DH) today (November 13) announced the latest epidemic situation of COVID-19. As of 0.00am, November 13, the CHP was investigating 6 108 additional locally acquired cases that tested positive for the SARS-CoV-2 virus, comprising 1 385 cases that tested positive by nucleic acid tests (680 confirmed cases, 585 asymptomatic cases and 120 cases with pending status) and 4 723 cases that tested positive by rapid antigen tests (RATs) in the past 24 hours.

Separately, 467 additional imported cases were reported, including 418 cases that tested positive by nucleic acid tests (88 confirmed cases, 240 asymptomatic cases and 90 cases with pending status) and 49 cases that tested positive by RATs. Among the additional imported cases, 257 of them involved samples at the airport, 124 of them involved samples during Day 1 to Day 3, and the remaining 86 involved samples during Day 4 to Day 7.

Hong Kong has recorded a total of 1 017 922 and 968 282 cases that have tested positive by nucleic acid tests and RATs respectively for the SARS-CoV-2 virus so far.

The CHP is continuing with epidemiological investigations of the cases. Please refer to the Annex and the "COVID-19 Thematic Website" (www.coronavirus.gov.hk) for more information.

The CHP has been closely monitoring the situation of positive cases involving mutant strains by genetic analysis. As of 0.00am, November 13, the DH's Public Health Laboratory Services Branch (PHLSB) had identified 217 cases of sub-lineage XBB, six of XBD, eight of BA.2.75.2, seven of BA.4.6, 11 of BF.7 and 32 of BQ.1.1 among imported cases in Hong Kong, while 24 cases of sub-lineage XBB, 15 of XBD, one of BA.2.75.2, one of BF.7 and 31 of BQ.1.1 have also been detected among local cases.

Among the specimens received by the DH's PHLSB during November 4 to 10 for verification testing of local cases, about 0.1 per cent and 88.4 per cent of them (seven-day moving average) are related to the sub-lineages BA.2.12.1 and BA.4/BA.5 (including suspected cases) of the Omicron mutant strain respectively.

In addition, as of 0.00am, November 13, a total of 10 313 death cases that had tested positive for the SARS-CoV-2 virus during the fifth wave (since December 31, 2021) were recorded, with 10 224 and 85 deaths reported

from the Hospital Authority and public mortuaries respectively as well as four deaths reported from private hospitals. Hong Kong has so far recorded a total of 10 526 death cases that tested positive for the SARS-CoV-2 virus.

Furthermore, among the earlier cases by nucleic acid tests reported, there were cases (including pending cases) changed to confirmed, asymptomatic or re-positive cases. As at yesterday (November 12), the total number of confirmed cases was 442 690, while the figures for asymptomatic cases, re-positive cases and pending/unknown cases recorded since January 1 were 328 413, 31 and 244 985 respectively.

The spokesman for the CHP said that COVID-19 vaccines are highly effective in preventing severe cases and deaths from the SARS-CoV-2 virus. They can provide effective protection to those vaccinated in preventing serious complications and even death after infection. People who have yet to receive vaccination, especially senior citizens, chronic patients, children and other immunocompromised persons who face a higher chance of death after COVID-19 infection, should get vaccinated as early as possible for self-protection and to reduce the risk of falling seriously ill and death should they get infected.

The CHP appeals to the community to keep on maintaining personal hygiene and comply with social distancing measures in order to jointly contain the risk of virus transmission. The spokesman reminded members of the public that they can call various hotlines to make enquiries on COVID-19 (www.coronavirus.gov.hk/eng/index.html#hotline).
