

CHP investigates locally acquired SARS-CoV-2 virus cases with 2 960 cases tested positive by nucleic acid tests and 5 322 cases by RATs verified as well as 297 imported cases

The Centre for Health Protection (CHP) of the Department of Health (DH) today (August 25) announced the latest epidemic situation of COVID-19. As of 0.00am, August 25, the CHP was investigating 8 282 additional locally acquired cases that tested positive for the SARS-CoV-2 virus, comprising 2 960 cases that tested positive by nucleic acid tests (1 414 confirmed cases, 1 269 asymptomatic cases and 277 cases with pending status) and 5 322 cases that tested positive by rapid antigen tests (RATs) verified in the past 24 hours.

Separately, 297 additional imported cases were reported, including 258 cases that tested positive by nucleic acid tests (four confirmed cases, 165 asymptomatic cases and 89 cases with pending status) and 39 cases that tested positive by RATs.

Hong Kong has recorded a total of 871 104 and 616 868 cases that have tested positive by nucleic acid tests and RATs respectively for the SARS-CoV-2 virus so far.

The CHP is continuing with epidemiological investigations of the cases. Please refer to the "COVID-19 Thematic Website" (www.coronavirus.gov.hk) for more information.

Among the specimens received by the DH's Public Health Laboratory Services Branch during August 16 to 22 for verification testing of local cases, about 8.5 per cent and 35.9 per cent of them (seven-day moving average) are related to the sub-lineages BA.2.12.1 and BA.4/BA.5 (including suspected cases) of the Omicron mutant strain respectively.

In addition, as of 0.00am, August 25, a total of 9 430 death cases that had tested positive for the SARS-CoV-2 virus during the fifth wave (since December 31, 2021) were recorded, with 9 349 and 78 deaths reported from the Hospital Authority and public mortuaries respectively as well as three deaths reported from the Chinese University of Hong Kong Medical Centre. Hong Kong has so far recorded a total of 9 643 death cases that tested positive for the SARS-CoV-2 virus.

Furthermore, among the earlier cases by nucleic acid tests reported, there were cases (including pending cases) changed to confirmed, asymptomatic or re-positive cases. As at yesterday (August 24), the total number of confirmed cases was 376 721, while the figures for asymptomatic cases, re-

positive cases and pending/unknown cases recorded since January 1 were 253 363, 31 and 237 771 respectively.

The spokesman for the CHP stressed that the local situation of COVID-19 infection is severe with the number of cases tested positive growing at an increased pace. The CHP strongly appeals to the community to strictly comply with social distancing measures and refrain from participating in unnecessary or crowded activities or mass gatherings. This would lower the risk of infection and prevent the virus from spreading in the community.

â€‹The spokesman reminded the public that COVID-19 vaccines are highly effective in preventing severe cases and deaths from the SARS-CoV-2 virus. They can provide effective protection to those vaccinated in preventing serious complications and even death after infection. People who have yet to receive vaccination, especially senior citizens, chronic patients, children, and other immunocompromised persons who face a higher chance of death after COVID-19 infection, should get vaccinated as early as possible for self-protection and to reduce the risk of falling seriously ill and death should they get infected.
