

CHP investigates one additional confirmed case of COVID-19

The Centre for Health Protection (CHP) of the Department of Health (DH) announced that as of 0.00am, June 16, the CHP was investigating one additional confirmed case of coronavirus disease 2019 (COVID-19), taking the number of cases to 11 882 in Hong Kong so far (comprising 11 881 confirmed cases and one probable case).

The newly reported case is an imported case.

Meanwhile, the CHP was notified by the Macao health authority of a suspected second positive case for the same person in Macao last night, which involved an 18-year-old male patient. The CHP's epidemiological investigations showed that the case was a local confirmed case as announced by the CHP on December 16, 2020 (case number: 7762), which was epidemiologically linked with a local case. The patient had recovered and was discharged from hospital on December 30, 2020, after treatment. He tested negative for COVID-19 on June 13 this year and went to Macao via the Hong Kong-Zhuhai-Macao Bridge Port on the same day. He tested weakly positive for COVID-19 on June 15 during quarantine in Macao. According to information provided by the Macao health authority, the patient tested positive for antibody against SARS-CoV-2. The CHP is following up on the case with the Macao health authority including comparing the genetic sequence of the samples. The CHP's epidemiological investigations of the case are ongoing. The CHP will carry out prudent measures and arrange the close contacts of the case to go to a quarantine centre. The building (Wah Chun House, Wah Fu Estate, Pok Fu Lam) where he had resided will be put under a compulsory testing notice.

A total of 33 cases have been reported in the past 14 days (June 2 to 15) including three local cases of which one is from unknown sources.

The CHP's epidemiological investigations and relevant contact tracing on the confirmed cases are ongoing. For case details and contact tracing information, please see the Annex or the list of buildings with confirmed cases of COVID-19 in the past 14 days and the latest local situation of COVID-19 available on the website "COVID-19 Thematic Website" (www.coronavirus.gov.hk).

Meanwhile, the CHP reminded those who had visited specified venues under the Prevention and Control of Disease (Compulsory Testing for Certain Persons) Regulation (Cap. 599J) to receive COVID-19 nucleic acid testing according to compulsory testing notices (CTNs). The Regulation also requires all household members of close contacts of confirmed cases to undergo a COVID-19 nucleic acid test within a specified period according to CTNs published in the Gazette. The public are also urged to seek medical attention early if symptoms develop, and undergo testing as soon as possible.

The Government has launched the COVID-19 Vaccination Programme. Members of the public are encouraged to get vaccinated. Details of the programme can be found at the designated website (www.covidvaccine.gov.hk).

The CHP called on members of the public to avoid going out, having social contact and dining out. They should put on a surgical mask and maintain stringent hand hygiene when they need to go out. The CHP strongly urged the elderly to stay home as far as possible and avoid going out. They should consider asking their family and friends to help with everyday tasks such as shopping for basic necessities.

The spokesman said, "Given that the situation of COVID-19 infection remains severe and that there is a continuous increase in the number of cases including mutant strains reported around the world, members of the public are strongly urged to avoid all non-essential travel outside Hong Kong.

"The CHP also strongly urges the public to maintain at all times strict personal and environmental hygiene, which is key to personal protection against infection and prevention of the spread of the disease in the community. On a personal level, members of the public should wear a surgical mask when having respiratory symptoms, taking public transport or staying in crowded places. They should also perform hand hygiene frequently, especially before touching the mouth, nose or eyes. Moreover, vaccination may help keep people from getting seriously ill even if they do get COVID-19, and, generally speaking, vaccines can also reduce the chance of transmission by those who have been vaccinated. People vaccinated with a COVID-19 vaccine can also generate herd immunity. Members of the public are urged to get vaccinated as soon as possible and book their vaccination appointments at the website (booking.covidvaccine.gov.hk/forms/index.jsp).

"As for household environmental hygiene, members of the public are advised to maintain drainage pipes properly and regularly pour water into drain outlets (U-traps). After using the toilet, they should put the toilet lid down before flushing to avoid spreading germs."

Moreover, the Government has launched the website "COVID-19 Thematic Website" (www.coronavirus.gov.hk) for announcing the latest updates on various news on COVID-19 infection and health advice to help the public understand the latest updates. Members of the public may also gain access to information via the COVID-19 WhatsApp Helpline launched by the Office of the Government Chief Information Officer. Simply by saving 9617 1823 in their phone contacts or clicking the link wa.me/85296171823?text=hi, they will be able to obtain information on COVID-19 as well as the "StayHomeSafe" mobile app and wristband via WhatsApp.

To prevent pneumonia and respiratory tract infections, members of the public should always maintain good personal and environmental hygiene. They are advised to:

- Wear a surgical mask when taking public transport or staying in crowded

places. It is important to wear a mask properly, including performing hand hygiene before wearing and after removing a mask;

- Perform hand hygiene frequently, especially before touching the mouth, nose or eyes, after touching public installations such as handrails or doorknobs, or when hands are contaminated by respiratory secretions after coughing or sneezing;
- Maintain drainage pipes properly and regularly (about once a week) pour about half a litre of water into each drain outlet (U-trap) to ensure environmental hygiene;
- After using the toilet, put the toilet lid down before flushing to avoid spreading germs;
- Wash hands with liquid soap and water, and rub for at least 20 seconds. Then rinse with water and dry with a disposable paper towel. If hand washing facilities are not available, or when hands are not visibly soiled, performing hand hygiene with 70 to 80 per cent alcohol-based handrub is an effective alternative;
- Cover your mouth and nose with tissue paper when sneezing or coughing. Dispose of soiled tissues into a lidded rubbish bin, then wash hands thoroughly; and
- When having respiratory symptoms, wear a surgical mask, refrain from work or attending class at school, avoid going to crowded places and seek medical advice promptly.
