

CHP investigates outbreak of upper respiratory tract infection at child care centre

The Centre for Health Protection (CHP) of the Department of Health is today (November 9) investigating an outbreak of upper respiratory tract infection (URTI) at a child care centre in Mong Kok, and appeals to members of the public and staff of institutions to stay alert and maintain strict personal and environmental hygiene.

The outbreak involves 23 children, comprising 14 boys and nine girls between 5 months and 3 years old. They developed fever, runny nose and cough since November 1. All of them have been managed by visiting doctors and hospitalisation was required for four children, all of whose respiratory specimens tested positive for enterovirus/rhinovirus upon laboratory testing. All of them are in stable condition. Their COVID-19 rapid antigen test results were negative.

Officers of the CHP conducted site visits to the child care centre today and yesterday (November 8) and provided preventive advice against URTI, such as advising the centre to arrange cleaning and disinfection, to open windows where appropriate for better ventilation and to separate affected children from other children, etc. The centre has been placed under medical surveillance.

The public should maintain good personal and environmental hygiene against influenza and other respiratory illnesses and note the following:

- Receive seasonal influenza vaccination for personal protection;
- Surgical masks can prevent transmission of respiratory viruses from ill persons. It is essential for persons who are symptomatic (even if having mild symptoms) to wear a surgical mask;
- Wear a surgical mask when taking public transport or staying in crowded places. It is important to wear a mask properly, including performing hand hygiene before wearing and after removing a mask;
- Avoid touching one's eyes, mouth and nose;
- Wash hands with liquid soap and water properly whenever possibly contaminated;
- When hands are not visibly soiled, clean them with 70 to 80 per cent alcohol-based handrub;
- Cover the nose and mouth with tissue paper when sneezing or coughing. Dispose of soiled tissue paper properly into a lidded rubbish bin, and wash hands thoroughly afterwards;
- Maintain good indoor ventilation;
- When having respiratory symptoms, wear a surgical mask, refrain from work or attending classes at school, avoid going to crowded places and seek medical advice promptly; and

- Maintain a balanced diet, exercise regularly, take adequate rest, do not smoke and avoid overstress.

Members of the public, particularly children, the elderly and those with chronic diseases, should consult a doctor promptly if they develop symptoms of respiratory tract infection.
