

Codification of restrictions in ERATV and ECVVR

Codification of restrictions in ERATV and ECVVR Reference: ERA/TD/2011-09/INT
Publication Date : 16/05/2018 Published by: Interoperability Document Types:
Technical Document Keywords: ERATV, NVR Description: This document presents a pragmatic solution intended to facilitate overcoming the language barriers in the registration of additional authorisations. This solution consists of a “pre-codification” of non-coded restrictions, so that these “pre-codes” may be used in the NVR and, if the European Commission so decides, included in the list of coded restrictions at a future revision of the NVR specification. There should be a single list of coded and pre-coded restrictions valid for both NVR and ERATV.

This document includes codes:

- indicated in [1] NVR Specification set out in Decision 2007/756/EC as amended by Decision 2011/107/EU;
- identified by the ERATV work party ([2] Decision on ERATV includes a provision for management by ERA of a list of codes for restrictions). Related documents:
