

# Corporate report: Dredged Material Disposal Site Monitoring Round Coast of England

This report presents the scientific findings of, and implications for subsequent monitoring based on the results from dredged material disposal site monitoring conducted under a Cefas/Marine Management Organisation Service Level Agreement (SLA 1.3) project (C6794 hereafter) round the coast of England during 2015-16, together with those obtained following the processing of biological and sediment contaminant samples acquired during 2014.

The main aims of this report are: to aid the dissemination of the monitoring results; to assess whether observed changes resulting from dredged material disposal are in line with those expected; to compare the results with those of previous years (where possible); and, to facilitate our improved understanding of the impacts of dredged material disposal at both a site-specific and a national (i.e. non site-specific) level.
