

# Demolition company fined after fall from height fatality

A dismantling and demolition company has been fined after a worker fell 30 feet to his death when part of a pipe bridge platform gave way.

Kirkcaldy Sheriff Court heard that John Gary Robertson, known as Gary Robertson, employed by CBR02 Limited (formerly known as Brown and Mason) suffered multiple injuries following a fall from height at Longannet Power Station, Fife on 6 February 2019.

A joint investigation by the Health and Safety Executive and Police Scotland into the incident found that the section of metal grating on the pipe bridge which the deceased had been standing gave way under his weight, as it had been extremely corroded. By failing to record the extremely hazardous condition of the pipe bridge the Company failed to undertake a suitable and sufficient risk assessment. In particular, the risk assessment, which formed part of the final, revised method statement, did not address the severely corroded nature of the pipe bridge, despite that being previously highlighted and requested by the client, Scottish Power. The Company failed to put necessary control measures in place, to inform employees of the hazardous condition of the pipe bridge, and to prevent access to it.

CBR02 Limited of Hertford Road, Middlesex pleaded guilty to breaching Section 2(1) of the Health and Safety at Work etc Act 1974. The company has been fined £5,000.

Speaking after the case HSE principal inspector, David Charnock, said: "Falls from height remain one of the most common causes of work-related fatalities in this country and the risks associated with working at height are well known.

"In this case, adequate communication of suitable information and instructions would have made employees aware of the unsafe condition of the pipe bridge platform."

## **Notes to Editors:**

1. The Health and Safety Executive (HSE) is Britain's national regulator for workplace health and safety. We prevent work-related death, injury and ill health through regulatory actions that range from influencing behaviours across whole industry sectors through to targeted interventions on individual businesses. These activities are supported by globally recognised scientific expertise. [www.hse.gov.uk](http://www.hse.gov.uk)
