

Electricity upgrade works – Pitfour Street/City Road area #dundeewestend

Starting tomorrow – Monday 7th October – Scottish and Southern Electricity Networks will start work to replace the underground electricity cables that serve Pitfour Street and the surrounding areas.

Two new 11kV cables will be installed from Pitfour Street Substation to the junction of Baxter Street and City Road. It is envisaged the works will be completed next month.

Traffic management will be put in place by their contractors, Inverness Paving. This will include temporary lane closures and parking restrictions along Pitfour Street.

There should be no interrupting to residents' electricity supply to carry out these works.

I recently gave details of the temporary traffic order and you can read this [here](#).

Scottish and Southern Electricity Networks has issued an explanatory leaflet to residents in the area and you can download this [here](#). This gives contact details of the project manager should any resident have any query.
