Notice: Yorkshire Water Services Limited (NPS/WR/027156): application made to impound water

The Environment Agency consult the public on certain applications for the abstraction and impoundment of water.

These notices explain:

- what the application is about
- which Environment Agency offices you can visit to see the application documents on the public register
- when you need to comment by

Policy paper: Devolution of Landfill Tax to Wales and the 2 year transitional period for the Landfill Communities Fund

Landfill Tax will be devolved to Wales from 1 April 2018 and the LCF in Wales will close. Environmental bodies may hold unspent funds from contributions by landfill operators located throughout England, Northern Ireland and Wales.

Ministers decided that there should be a 2 year transition period, from 1 April 2018 until 31 March 2020, during which these unspent funds can be spent on projects located in England, Northern Ireland and Wales.

News story: Results of first survey of thousands of heat network consumers

The government has today published the findings of the <u>first survey of heat</u> <u>network consumers</u>. It asked about their satisfaction with their heating system, price and transparency of billing, and customer service.

A heat network takes heat from a central source and delivers it to a number of buildings. There are around 17,000 heat networks in the UK, with some of the largest networks at the Queen Elizabeth Olympic Park in East London, Sheffield and Nottingham.

Expansion of the heat networks market is a key part of the government's <u>Clean Growth Strategy</u>, but strong consumer protections are needed to ensure that customers can be confident in their heating supply as the market develops.

Our survey was carried out by independent researchers between April and July 2017 and received over 5,000 responses. The survey results suggested that, while there was significant variation in the prices paid by heat network consumers, on average they were likely to pay less than non-heat network consumers.

The survey also shows that while there are issues affecting the sector that need addressing, heat network consumers were just as satisfied overall with their heating systems as non-heat network consumers.

Consumers on <u>Heat Trust</u> registered schemes (the voluntary industry-led consumer protection scheme) in general received more comprehensive billing information, and service interruptions tended to be rectified quicker, in line with the Heat Trust's service standards.

Claire Perry, Minister for Climate Change and Industry said:

As we set out in our Clean Growth Strategy, encouraging the uptake of heat networks is an important way to reduce carbon and cut heating bills for customers.

This survey of consumers provides an important evidence base as we seek to expand the use of heat networks from now to 2021.

The projects that the government supports through the <u>Heat Network Investment Project</u> must meet Heat Trust equivalent standards, comparable to those provided to customers of gas and electricity, as well as meet minimum technical standards in terms of performance and efficiency of systems. Membership of these schemes is voluntary for existing heat networks.

The government will feed in the results of the survey to the Competition and Markets Authority which announced today that it is carrying out a market study into the heat networks sector. The heat networks industry is also developing proposals to protect consumers and lower risk for investors which will be published in 2018.

Notice: M44 6BD, Kingsland Drinks Limited: environmental permit issued

The Environment Agency publish permits that they issue under the Industrial Emissions Directive (IED).

This decision includes the permit and decision for:

• Operator name: Kingsland Drinks Limited

• Installation name: The Winery

• Permit number: EPR/VP3434YY/A001

Press release: New guidance for fishermen ahead of next phase of the discard ban

The next phase of the landing obligation, also known as the 'discard ban', comes into force from 1 January 2018.

The Marine Management Organisation <u>has provided guidance</u> for the fishing industry to help them comply with the next phase of the discard ban. This outlines which fish come under the landing obligation, what fishermen have to do with them on board, and which can be sold for human consumption.

The new developments will see more fishing vessels captured by the landing obligation as thresholds for inclusion are reduced or removed for some fish species. There are also changes around exemptions for some vessels, in particular where scientific evidence indicates that an increase in selectivity of species is hard to achieve and around unwanted catches for certain gear types.

For 2018, the UK Government has worked to maintain, and in some cases extend, exemptions allowing fish with high survival rates to be discarded as well as some unwanted catches that are difficult to avoid. In addition, the MMO will continue to apply a fair and proportionate approach to enforcement.

The development is the latest phase of the wider discard ban which will bring an end to the practice of throwing dead fish back into the sea. The landing obligation was initially introduced in January 2015 for certain pelagic fisheries. All quota species will be phased in under landing obligation rules by 2019.

Guidance on the $\underline{\text{landing obligation}}$ can also be found on the European Commission's website.
