[Research and analysis: Marine species migration pathways](#)

Updated: Title changed

Requirement R005

Requirement detail

Improved information on the migratory pathways, timings and relative conservation importance of marine species is required to inform balanced evaluation of the cost and benefits of protecting those pathways.

Though information on all migratory species would be useful, early work will be to identify the species that are of most interest (including migratory fish), particularly species that are subject to statutory conservation measures.

This requirement focuses on migration (predictable large-scale movement in space and time) rather than just mobility e.g. dispersal.
