

Press release: Helping residents be prepared for flooding

The Environment Agency is working with residents in Chester-le-Street to help them be better prepared for flooding.

Press release: Man sentenced for assaulting Environment Agency officer

A North East man has been fined after he assaulted and threatened an Environment Agency officer investigating a pollution incident.

Press release: Environment Agency joins forces with eBay to stop illegal vehicle breakers

The partnership will also act to better inform the public who may unknowingly purchase parts from illegal traders.

Business sellers who list used vehicle parts now receive a pop up message to highlight that an environmental permit is needed to break vehicles and directs them to Gov.uk where they can get further information.

Sellers on eBay are also being advised to display their permit number, or the name of the sites where they source the parts they are selling, which provides reassurance to purchasers that they are buying from a legal dealer.

The Environment Agency are directly contacting eBay traders who are not displaying their environmental credentials, providing guidance and warning them about undertaking non permitted breaking activities.

Those intentionally operating illegally and not responding to the Environment Agency will find their trading account suspended or removed from eBay.

It has been discovered that some car breakers and traders are not aware of the need to have a permit. They are also unaware of how to properly dismantle a vehicle, dispose of the hazardous waste, deal with fire risks and subsequent

risk to the environment.

The new partnership has resulted in an increase in applications for permits to take their business into legal status. The Environment Agency has also benefited from being able to utilise resources and time in tackling illegal car breaking.

Rich Cloke from the Environment Agency said:

Businesses are not always aware they should have a permit and many are reacting positively to the messages we are getting to them. We have seen an increase in businesses subsequently applying for the relevant permit.

This is proving to be a quick and effective way of communicating our message directly with vehicle breakers and parts dealers.

With sellers who continue to trade, the Environment Agency will take further steps including reporting them to the Police and Her Majesty's Revenue and Customs (HMRC) and making a site visit.

The partnership will also aim to inform the general public who may unknowingly purchase used parts from illegal businesses.

A spokesperson for eBay commenting on working with the Environment Agency said:

eBay's contribution to supporting the Environment Agency compliance efforts on the sale of vehicle parts sourced from illegal End of life Vehicle (ELV) breakers has significantly increased the level of compliance from business sellers on eBay UK website.

This successful cooperation leads the industry and sets an example of effective collaboration between the private sector and the Environment Agency, rarely seen both offline and online.

The Environment Agency and eBay have joined forces to tackle illegal car breakers which use the e-commerce site to trade.

[Press release: Gross pollution leads to more than £23,000 in fines and costs](#)

DEM (King's Lynn) Ltd stored too much highly polluting waste in a lagoon and spread too much of the organic waste onto land controlled by Trevor William Sieley, leading to run off and pollution, King's Lynn Magistrates heard.

Storage and spreading of waste on the land by the company was illegal and magistrates fined both the person in control of the land and the company. Sieley, who had received a warning letter and previous offences for similar actions, was fined £1,920 and ordered to pay costs of £10,041 as well as a victim surcharge of £170.

Sieley had denied knowingly allowing the illegal waste operation but the court found him guilty, deciding that his actions were reckless.

DEM, which pleaded guilty at an earlier hearing to spreading the waste illegally, was fined £3,667, ordered to pay £7,666 and a victim surcharge of £170.

Mr Gurjit Bdesha, prosecuting for the Environment Agency, told the court the company had deposited and stored waste at the site for almost two years under an exemption, which did not cover the level of operations. There was no environmental permit which would have set out conditions to protect the environment.

Waste vegetable washings were stored and spread on 3.99 hectares of land at Poplar Farm in Outwell. The exemption allowed for waste produced only on the farm to be spread but waste potatoes and washings were brought from two companies onto the site. During 20 months it is estimated that 7,700 tonnes of waste was taken to the farm and deposited or spread.

Sieley had registered an exemption to spread waste on agricultural land to improve soil quality but failed to comply with its conditions. A lagoon, used to store some of the waste, over-spilled and was too close to a ditch and

there was too much spread on the land.

Environment Agency officers visited the site in April 2015 after reports from Nordelph Internal Drainage Board that a slurry pit was polluting nearby watercourses. They found heaps of potatoes stored in the field, straw bale walls of the lagoon decomposing and effluent leaking from the lagoon into the ditch.

In June they told the company to stop work and clear up the site by 1 October but no action was taken.

Mr Bdesha said:

In November 2015 the lagoon looked the same, potatoes around the site were in various states of decay and the soil in the field gave off a decaying smell. The lagoon was also over-spilling into a ditch that flowed to the IDB drain.

The court heard that in 2007 Sieley was the sole director of another company that was involved in a similar incident on land at Outwell which resulted in his previous conviction and in 2005 was issued with a warning letter for the disposal of potato wash water on to land/into a soak-away pit at Walsingham Fen, Outwell without a waste management licence.

After the hearing Environment Agency team leader Chris Tate said:

This company was not complying with the agricultural exemption and was also taking waste illegally from other businesses.

By not having the right environmental permit, illegal waste activities pose a threat to human health and the environment by contaminating land and polluting rivers. Anyone who produces, carries, keeps, treats or disposes of waste has a duty of care to make sure it is managed correctly.

Trevor William Sieley was found guilty of:

Between 8 November 2013 and 16 June 2015, on land at Poplar Farm, the Aqueduct, Outwell, in the County of Norfolk, you knowingly permitted the operation of a regulated facility, namely a waste operation for the deposit and storage of waste, without being authorised by an environmental permit granted under Regulation 13 of the Environmental Permitting (England and Wales) Regulations 2010. Contrary to Regulation 12(1)(a) and 38(1)(b) Environmental Permitting (England and Wales) Regulations 2010

DEM (Kings Lynn) Ltd pleaded guilty to:

Between 8 November 2013 and 16 June 2015, on land at Poplar Farm, the Aqueduct, Outwell, in the County of Norfolk, you did operate a regulated facility, namely a waste operation for the deposit and storage of waste, without being authorised by an environmental permit granted under Regulation

13 of the Environmental Permitting (England and Wales) Regulations 2010.
Contrary to Regulation 12(1)(a) and 38(1)(a) Environmental Permitting
(England and Wales) Regulations 2010
