

[Attracting pollinators easy as A, Bee, C](#)

With the planet set to be abuzz with activity for World Bee Day this weekend (Sunday 20 May 2018), new advice demonstrates how farmers can improve their crop yields by providing habitats for insects.

[Correspondence: Standardised Reporting of Radioactive Discharges Direction 2018](#)

Direction from the Secretary of State and Welsh Ministers to the Environment Agency and the Natural Resources Body for Wales. This covers the reporting of standardised information on radioactive airborne and liquid discharges into the environment from nuclear power stations and nuclear reprocessing plants, as required by Article 67.2 of the Basic Safety Standards Directive 2013/59/Euratom.

[Press release: Boaters warned to register your vessel or face court action](#)

Boat owners are being urged to make sure their vessels are properly registered – or face paying thousands of pounds in penalties.

The call comes after 6 boaters were ordered to forfeit more than £7,200 between them – all for failing to register their craft for use on the River Nene.

It is a legal requirement for boat owners to register any vessel they keep, use or let for hire on Environment Agency waterways, and to clearly display a valid registration plate. None of the guilty 6 had done so.

Mark Bennett of Meadow View in Great Addington, Jim Brown of Station Road in Ringstead, David Campion of Oxford Street in Finedon, Andrew James

MacGillliuray of Kestrel Lane in Wellingborough, Stewart Richardson of Ringstead Road in Ringstead, and Robert William Whiteside of Beloe Crescent in King's Lynn have each been given 14 days to pay up.

Their cases were heard at Northampton Magistrates' Court on Tuesday 1 May 2018. Mr Bennett was ordered to pay a total of £944.99, Mr Brown £1,393.29, Mr Campion £944.99, Mr MacGillliuray – who owned 3 of the unregistered vessels – had to pay £2655.95, Mr Richardson £503.98, and Mr Whiteside £843.98.

It brings the total amount of avoided registration charges that have been recovered by the Environment Agency this year to almost £120,000. The cash is reinvested into maintaining, improving and protecting waterways.

Nathan Arnold, Waterways Partnerships and Development Team Leader, said:

Our historic and precious waterways are an important part of our nation's heritage and are enjoyed by hundreds of thousands of people every year,

Those who don't contribute as they should are threatening the future of our waterways – and we won't hesitate to take action against them.

As well as not contributing to the upkeep of waterways, unregistered boats can be unsafe, hazardous to other river users, and a pollution risk to the local environment and its wildlife.

The Environment Agency looks after 353 miles of navigable waterways in the Anglian network, which includes the Ancholme, Black Sluice, Glen, Welland, Nene, Great Ouse and Stour, as well as associated locks and navigation facilities like moorings, showers and toilets.

More information about boating and waterways, including registering vessels, is available from the [Environment Agency](#). If you suspect a boat is illegal, please contact them on 03708 506 506 or email waterways.enforcementanglian@environment-agency.gov.uk

[Press release: Bonus beaches leads to record number of swimming spots](#)

As the bathing water season begins this week, visitors to the seaside will have 422 bathing spots to choose from after nine new beach locations have been designated as official bathing waters along the south coast.

The Environment Agency tests water quality at every official bathing water to

ensure it is maintained and improved. Last year, water quality remained high with 98.3% of bathing waters in England meeting the tough standards. 92% of these locations achieved the top rating of Excellent or Good.

Beach-goers can check out the water quality at their nearest bathing water spot by visiting the Environment Agency's online map at the [Bathing Water Data Explorer website](#).

Helen Wakeham, Deputy Director of Water Quality at the Environment Agency, said:

It is wonderful news that more beaches have been given bathing status in time for the start of the 2018 season. Water quality has improved at English beaches giving locals and tourists a better experience as well as benefiting the environment.

Water quality tests are published online, me and my family will certainly be searching the online map before heading off to enjoy time at the beach this summer.

The Environment Agency will continue to work with water companies, councils and local communities to keep our beaches clean, reduce pollution and protect our environment. We are working to achieve the goal in Defra's 25 Year Plan to minimise the harmful bacteria in our bathing waters by 2030.

During the bathing water season environment officers will take up to 20 samples at each location, from now until the end of September. Samples will be tested in Environment Agency labs for cleanliness. This year, in addition to sampling water quality, Environment Agency teams will also carry out surveys of plastic pollution on beaches. This data will help target our work and support community action.

Dramatic improvements have already been made over the last two decades to prevent pollution ending up in the sea, but there is always more to do.

Pollution from sewage and from agriculture are generally recognised as the two most significant sources but there are some local variations. Surveys have shown that around a third of bathing water pollution is caused by agriculture. This year the Environment Agency is rolling out [new rules for farmers](#) to ensure best practice is followed and pollution from farms is reduced.

Water companies have done a lot over the last two decades to improve infrastructure investing over £2.5 billion on projects that have improved water at swimming beaches.

To go further the Environment Agency are advising water companies on the investment they should be making to protect the environment, these include measures to protect water quality as well as being more resilient to flooding and potential water shortages. Environment Agency proposals include that water companies should improve 24 bathing waters between 2020-2025.

All members of the public can help keep water clean by taking all rubbish with them after visits to the beach, not leaving dog mess on the beach and at home never flushing wet wipes or pouring fats down drains.

Heavy rain is likely to reduce water quality in the short term, even at Excellent beaches. Information on the Bathing Water Data Explorer website may advise against swimming and there could be temporary signs at beaches.

The nine new beaches have become official bathing waters following suggestions from councils, feedback from public consultations and a decision by the Department for Environment, Food and Rural Affairs.

All the new bathing waters will have signage to show they are official swimming spots and the Environment Agency will test water quality regularly.

One of the new beaches is in Bournemouth, Manor Steps beach. Eight of the new locations are in Cornwall: South Fistral beach in Newquay, Booby's Bay near Trevoze Head, Mexico Towan, Upton Towan and Godrevy, all situated on a long stretch of dunes in St Ives Bay, Northcott Mouth beach to the north of Bude, Gwynver Beach which forms part Whitesand Bay and Tregonhawke in Whitesand Bay.
