

European infrastructure to support Earth-science research

The European Plate Observing System ([1]EPOS) has been officially launched this week at a ceremony in Rome.

Will mutton make the cut on Skye?

With its stunning scenery and the ethereal majesty of the Cuillin, the Isle of Skye is one of Scotland's most popular and iconic tourist destinations.

Press release: Body worn cameras to help fight fisheries and waste crimes

East Midlands officers are now wearing body worn video cameras to aid prosecutions and as a deterrent to violence

Press release: Body worn cameras to help fight fisheries and waste crimes

Environment Agency enforcement teams in the East Midlands have adopted wearing body worn video cameras in their fight against crime following a successful six-month trial of the practice in the North-East.

The trial in the North-East found that wearing the cameras helped to reduce incidents of anti-social behaviour, assaults and threats against Environment Agency staff.

Following a growing number of abusive incidents during site inspections to waste sites, enforcement officers will be equipped with body worn video cameras on their visits. The cameras will also be used by fisheries

enforcement officers during their routine activities.

Footage captured on a bodycam in the North-East was recently used by the Environment Agency for the first time to convict an offender. The defendant pleaded 'guilty' of wilfully obstructing the officers in the execution of their duty and using abusive behaviour towards two officers when he knew they had video evidence.

Pete Haslock, Enforcement Team Leader for the Environment Agency in the East Midlands, said:

The safety of our staff is paramount. They are well trained in dealing with hostile situations and we take any threat against them very seriously. Our preference is to prevent hostility in the first place and wearing the cameras can prevent threatening situations from escalating.

We want to get on with our jobs without the threat of violence and the cameras will help to protect staff and bring obstructive individuals to justice. Officers will switch on the cameras if and when they enter a hostile situation or where hostility may be anticipated. That could be a site where they have experienced aggressive behaviour in the past or an unknown quantity, such as on a remote river bank.

Studies also show that people are less likely to contest the evidence when they know their offence is captured on camera, which could help speed up justice and reduce legal costs.

Anyone with information about illegal fishing activities or to report illegal waste activity, should contact the Environment Agency's 24/7 Incident Hotline on 0800 80 70 60 or anonymously to Crimestoppers on 0800 555 111.

UK's first deep geothermal plant starts Cornwall drilling

Drilling at the UK's first deep geothermal electricity plant is to start this week at the United Downs Industrial Estate in Cornwall, south-west England.
