

River restoration project to reduce flood risk

27 September 2018

An exciting new river restoration project designed to restore the Glazert Water to a more natural condition and minimise the likelihood of flooding in the River Kelvin Catchment downstream is one step closer.

The proposal for the Glazert River Restoration Project in the heart of Lennoxton is the result of a study commissioned by SEPA and the Scottish Government to restore natural waterways.

The aim is to provide flood risk benefits to the River Kelvin and to reduce the likelihood of flooding to communities in Kirkintilloch and Torrance. The restoration work will physically restore the Glazert watercourse in Lennoxton.

This will also enhance the water quality and revitalise the wildlife corridor serving the communities of north Kirkintilloch, Milton of Campsie, Lennoxton, Clachan of Campsie and Haughhead.

Councillor Billy Hendry, Convener of Place, Neighbourhood and Corporate Assets Committee, said:

The proposed works will provide protection for communities previously affected by flooding and the wider area will also become more resilient to the type of extreme weather events that climate change is likely to bring. The works would also enhance opportunities for outdoor access and recreation.”

Terry A’Hearn, SEPA’s Chief Executive, said:

Every day SEPA works to protect and enhance Scotland’s environment, and we are committed to using partnerships as our principal way of delivering environmental outcomes.

“This exciting project to improve the condition of the Glazert Water is good news for local communities and the environment. This will restore wildlife and habitats along the river, minimise the likelihood of flooding and improve amenity for locals. We will continue to work with our partners to help ensure the sustainable future of the Glazert Water.”

SEPA will provide technical expertise on the project and have received match WEF (Water Environment Fund) funding from Scottish Government.

The project aims to reconnect the river back to the original flood plain which will have benefits for areas downstream where risk of flooding will be reduced. Improved water quality will help to increase biodiversity. Historically, industrial pollution including red ore from mining in the area had reduced the water quality of the Glazert river.

The next stage is to produce a detailed plan which would then be subject to approval. If the proposal gets the green light, the project would take three years from detailed design to completion in 2021.

[Stirling landowner ordered to pay £26,388 for waste offences](#)

📅 27 September 2018

Stirling landowner, George Adam was fined £6,000 and served with a Confiscation Order, under the Proceeds of Crime Act, for £20,388 at Stirling Sheriff Court yesterday (Wednesday 26 September 2018).

Mr Adam pled guilty to illegally managing and keeping asbestos, plastics and other wastes, at the former Cowie Road Landfill, Bannockburn, without the necessary authorisations from SEPA.

SEPA officers attended the former landfill site, operated by Mr Adam, at Cowie Road on several occasions between 24 July 2015 and 7 December 2015 to assess compliance with the site's registered exemption. At these visits SEPA officers noted that waste, which did not comply with the exemption, was present on site and also outwith the exemption boundary.

Sampling of the waste confirmed that materials including soil, stones, plastic, metals, wood and waste trommel fines, containing asbestos, were present on site. Leachate was also observed at the site which had the potential to seep into the ground and enter the groundwater, and also to eventually result in odours off-site.

Whilst SEPA served an enforcement notice under the Environmental Protection Act on Mr Adam on 7 December 2015, requiring the removal of waste from the site, further site visits by SEPA Officers showed that the waste had not been removed. The enforcement notice had not been complied with.

Terry A'Hearn, SEPA's Chief Executive, said:

"Every day SEPA works to protect and enhance Scotland's environment, and we are clear that environmental compliance is non-negotiable.

“Waste activities are subject to strict regulations to ensure that the environment is protected. George Adam has shown a blatant disregard for these regulations and we are pleased that he has been held to account for this.

“We have a good track record of compliance in Scotland. One reason for this success is that, where these standards are not met, we are determined to take tough action. This is at the heart of our regulatory strategy, One Planet Prosperity. SEPA will always take enforcement action in line with our enforcement policy against those who persist with such unlawful business practices.”

Ends

Notes to editors

The exact charge George Adam pled guilty to was:

(002) On repeated occasions between 24 July 2015 and 20 January 2016, both dates inclusive at the former Cowie Road Landfill, Cowie Road, Bannockburn you GEORGE ADAM did manage and keep controlled waste, namely soil and stones and waste trommel fines containing asbestos, paper, plastic, glass, wood, polystyrene, plasterboard, tiles , metals, insulation material, gravel, concrete, wire, bricks and ceramics in or on said land otherwise than in accordance with a waste management licence in that you did keep said waste on said land without the authority of a waste management licence and out-with the terms of any registered waste management exemption; CONTRARY to the Environmental Protection Act 1990, Section 33(1)(b)(i) and (6) as amended

Press release: Dry weather support secured for livestock farmers

Farmers affected by this summer’s dry weather have been offered further assistance by the UK government.

New flexibility from the EU Commission has been secured, which will help farmers increase the amount of feed they can grow for their livestock.

The dry weather earlier this summer has meant many livestock farmers have not had enough pasture to graze their animals on, with some having to break into their winter feed supplies early.

From today, farmers will be allowed to grow grass and other edible forage in areas that are not usually allowed for grazing.

This is after the UK government secured a derogation from the EU’s Ecological Focus Area (EFA) winter crop requirements, which stipulates that certain

areas must be left fallow or sown with crop mix that cannot be grazed.

This is the latest in a series of practical solutions to help farmers affected by the dry weather, including:

- Granting of 89 flexible water abstraction licenses by the Environment Agency for farmers to safeguard food production and animal welfare. The majority of applications received have been approved.
- Publishing [guidance for 40 Countryside Stewardship options](#) which can be adjusted for this year without penalty if agreement holders notify Natural England by the end of 2018.
- Waiving penalties for farmers who fail to establish EFA catch crops by 20 August.
- Communicating to farming groups that they are able to graze fallow land without need for a derogation.

Secretary of State Michael Gove said:

We have had one of the driest summers since modern records began in 1961, and it is only right that we do what we can to support farmers who have been placed under the most pressure.

I am pleased that the flexibilities announced today will offer some help to livestock farmers by opening up new sources of fodder ahead of the winter.

I am also glad that we are continuing to discuss the industry's ideas for longer-term resilience.

The government will continue to monitor the situation and listen to industry as we move towards the autumn and winter months.

[Press release: Gross pollution leads to more than £23,000 in fines and costs](#)

DEM (King's Lynn) Ltd stored too much highly polluting waste in a lagoon and spread too much of the organic waste onto land controlled by Trevor William Sieley, leading to run off and pollution, King's Lynn Magistrates heard.

Storage and spreading of waste on the land by the company was illegal and magistrates fined both the person in control of the land and the company. Sieley, who had received a warning letter and previous offences for similar actions, was fined £1,920 and ordered to pay costs of £10,041 as well as a

victim surcharge of £170.

Sieley had denied knowingly allowing the illegal waste operation but the court found him guilty, deciding that his actions were reckless.

DEM, which pleaded guilty at an earlier hearing to spreading the waste illegally, was fined £3,667, ordered to pay £7,666 and a victim surcharge of £170.

Mr Gurjit Bdesha, prosecuting for the Environment Agency, told the court the company had deposited and stored waste at the site for almost two years under an exemption, which did not cover the level of operations. There was no environmental permit which would have set out conditions to protect the environment.

Waste vegetable washings were stored and spread on 3.99 hectares of land at Poplar Farm in Outwell. The exemption allowed for waste produced only on the farm to be spread but waste potatoes and washings were brought from two companies onto the site. During 20 months it is estimated that 7,700 tonnes of waste was taken to the farm and deposited or spread.

Sieley had registered an exemption to spread waste on agricultural land to improve soil quality but failed to comply with its conditions. A lagoon, used to store some of the waste, over-spilled and was too close to a ditch and there was too much spread on the land.

Environment Agency officers visited the site in April 2015 after reports from Nordelph Internal Drainage Board that a slurry pit was polluting nearby watercourses. They found heaps of potatoes stored in the field, straw bale walls of the lagoon decomposing and effluent leaking from the lagoon into the ditch.

In June they told the company to stop work and clear up the site by 1 October but no action was taken.

Mr Bdesha said:

In November 2015 the lagoon looked the same, potatoes around the site were in various states of decay and the soil in the field gave off a decaying smell. The lagoon was also over-spilling into a ditch that flowed to the IDB drain.

The court heard that in 2007 Sieley was the sole director of another company that was involved in a similar incident on land at Outwell which resulted in his previous conviction and in 2005 was issued with a warning letter for the disposal of potato wash water on to land/into a soak-away pit at Walsingham Fen, Outwell without a waste management licence.

After the hearing Environment Agency team leader Chris Tate said:

This company was not complying with the agricultural exemption and was also taking waste illegally from other businesses.

By not having the right environmental permit, illegal waste activities pose a threat to human health and the environment by contaminating land and polluting rivers. Anyone who produces, carries, keeps, treats or disposes of waste has a duty of care to make sure it is managed correctly.

Trevor William Sieley was found guilty of:

Between 8 November 2013 and 16 June 2015, on land at Poplar Farm, the Aqueduct, Outwell, in the County of Norfolk, you knowingly permitted the operation of a regulated facility, namely a waste operation for the deposit and storage of waste, without being authorised by an environmental permit granted under Regulation 13 of the Environmental Permitting (England and Wales) Regulations 2010. Contrary to Regulation 12(1)(a) and 38(1)(b) Environmental Permitting (England and Wales) Regulations 2010

DEM (Kings Lynn) Ltd pleaded guilty to:

Between 8 November 2013 and 16 June 2015, on land at Poplar Farm, the Aqueduct, Outwell, in the County of Norfolk, you did operate a regulated facility, namely a waste operation for the deposit and storage of waste, without being authorised by an environmental permit granted under Regulation 13 of the Environmental Permitting (England and Wales) Regulations 2010. Contrary to Regulation 12(1)(a) and 38(1)(a) Environmental Permitting (England and Wales) Regulations 2010
