

# World news story: British Embassy launches National Wildlife Protection Themed Campaign in China

Designed to raise public awareness of the global effects of illegal wildlife trade (IWT), the 'End Wildlife Crime' campaign will include more than eight events across China over the coming months, all leading up to the fourth global IWT conference hosted in London in October.

The launch event took place in Beijing Fang and was in partnership with the International Fund for Animal Welfare (IFAW).

'End Wildlife Crime' comes at a particularly crucial time when our nature, forests, oceans and wildlife, have all been increasingly affected by human activities. Excessive deforestation and the expanding cities deprive the wildlife of their habitats. Many species are being poached for use in illegal trade. In the last decade, the number of elephants alone has declined by almost a third and around 20,000 a year are still being slaughtered because of the global demand for ivory.

With its continued commitment to wildlife protection, the UK will host the fourth global IWT Conference this October, convening over 40 countries, including China, to discuss and agree a way forward for tackling this important global challenge together.

The UK government in China launched this nationwide wildlife protection campaign to raise public awareness of the severe situation endangered species are facing to survive, including elephants, pangolins, rhinos and tigers. By introducing the global effects of illegal wildlife trade, the UK government would like to encourage the public to take a more active role in diminishing the demand of illegal wildlife products. This campaign will include a series of photography exhibitions, film festivals and panel discussions across China including in Beijing, Shanghai, Wuhan, Chengdu, Chongqing and Guangzhou.

During the opening ceremony, Martyn Roper, the Chargé d'Affaires of the British Embassy, said:

The UK and China have been working closely towards our joint goal of sustainable development, this includes through collective actions between our governments and our people on ecological and environmental protection and combating illegal wildlife trade together to protect the planet.

At the beginning of this year, China's domestic ban on the commercial trade of ivory took effect. Likewise, the UK is committed to working ever closer with China in these areas. This October, the UK will host the fourth Conference to tackle the

illegal wildlife trade in London, where we look forward to joining hands with China again in the rise of this global challenge.

We hope that through our campaign 'End Wildlife Crime' that more people will be aware of the important role we have to play in eradicating this global issue and saving our planet together.

Xu Maomao, the Project & Operations Director of IFAW said:

Irresponsible consumption and trade of wildlife productions are damaging the global biodiversity. Poaching and hunting of species like elephant, pangolin, rhino and tiger, excessive and mindless consumption of wildlife productions by some consumers are pushing the species to the brink of extinction.

We call for everyone to stop consuming wildlife and save their lives.

## Notes to Editor:

### About 'End Wildlife Crime'

Time	City /Venue	Events
10th Aug	BEIJING FUN	National Launch
10th Aug- 14th Aug	BEIJING FUN	Photo Exhibition and screening
17th Aug	BEIJING/ Lumière Pavilions	Screening and Panel Discussion
19th Aug	CHONGQING / Yuejie Movie City	Screening and Panel Discussion
19th Aug	CHONGQING / Fangsuo Screening	and Panel Discussion
24th Aug	BEIJING/ Lumière Pavilions	Screening and Panel Discussion
1st Sep	CHONGQING / UME	Screening and Panel Discussion
15th Sep	BEIJING/ British Ambassador's Residence	Open Day Wildlife theme activities

Coming soon: Guangzhou, Shanghai, Wuhan.

### About IFAW

The International Fund for Animal Welfare (IFAW) is a global non-profit organization that protects animals and the places they call home. IFAW has offices in 17 countries and projects in over 40 countries, with over 200 experienced campaigners, legal and political experts, and internationally acclaimed scientists. Our work connects wildlife rescue and conservation, as we believe that the value of the individual animal is linked to the health of the population and ecosystem at large.

### About Lumière Pavilions

Lumière Pavilions is a cinema investment company focusing on the development

and operation of high-end cinemas in China. Since its establishment, the company has positioned itself as the trendsetter in the industry by way of its global vision, innovative designs and adoption of advanced technology. Its introduction of the world-class practices in design, construction, technology, content and service in compliance with international standards has not only garnered acclamation from the general audience but also elevated the company to emerge as a leading brand amongst the competition.

## **About the Jackson Hole Film Festival**

The Jackson Hole Film Festival is a biennial 6-day conference, well-known and the most prestigious media event of the year devoted to the nature conservation, which gathers more than 650 international leaders in science, broadcasting, conservation, and media. That festival is dedicated to helping filmmakers find their own audiences, providing acquisition, marketing and distribution services. Also Jackson Hole Film Festival is a very exciting, social and educational event devoted to the Wild Nature, its problems and forecasts. It is supported by Jackson Hole Film Institute, a non-profit organization, whose mission is to empower filmmakers and audiences through film and new media.

## **[Detailed guide: Preventing agricultural pollution in exceptional weather](#)**

You can cause soil damage and water pollution if you spread slurry or milk during exceptional weather or on unfavourable soil.

You must [contact the Environment Agency](#) if:

- your slurry or milk store is at risk of over flowing or leaking
- you cannot avoid spreading slurry or milk on agricultural land and there is a risk of slurry runoff, run-through to land drains or leaching
- you are at risk of breaching the legal requirements of:
  - [nitrate vulnerable zones](#)
  - [storing silage, slurry and agricultural fuel oil \(SSAF0\) rules](#)
  - [rules for farmers and land managers to prevent water pollution](#)

You can only spread milk to land if you have a [U10 waste exemption](#).

## **Definition of exceptional weather**

Exceptional weather is weather that is not common, usual or reasonably expected. For example, the long exceptionally dry periods during the summers

of 1976 and 2018.

It does not apply to weather that can be planned for. For example, wetter than average winter rainfall.

## Contingency plan

You must have a contingency plan to avoid causing pollution during exceptional weather.

You must make sure that all your staff and contractors are aware of your contingency plan. It should include field inspections to consider the risk of slurry or milk getting into surface water or groundwater.

Work with neighbouring farms to create your contingency plan if possible.

Use the following hierarchy of options to make your contingency plan. 1 is the most favourable and 5 is the least favourable:

1. Store the slurry or milk at the place of production.
2. Store the slurry or milk at the place of use.
3. Dispose of the slurry or milk at an off-site anaerobic digestion plant or other effluent treatment plant, including at a sewage treatment works – milk can only go to permitted anaerobic digestion sites.
4. Store the slurry or milk off site.
5. Spread the slurry or milk on low run-off risk land.

## Reducing the amount of slurry you produce

During exceptional weather you should reduce the amount of slurry (including lightly fouled water) you produce. You should:

- wash dairy parlours down with a low volume hose system (0.6 cubic metres per cow per month or 20 litres per cow per day)
- remove excess dung with a brush or squeegee before hosing down to reduce the amount of wash water you need to use
- keep animals on straw to produce solid manure rather than slurry
- divert uncontaminated surface water away from dirty yards
- keep or move livestock onto the smallest yard area necessary
- install, maintain or repair gutters and downpipes, especially on roofs that drain onto dirty yards
- consider covering exposed fouled yard areas

## Temporary slurry storage

You must normally comply with [SSAFO rules](#) to store slurry.

However, the Environment Agency will waive the full SSAFO requirements if you want to store slurry for less than 12 months. You must only consider temporary storage where existing facilities are inadequate.

Temporary storage could include:

- reinstating disused stores
- reclaiming tanks
- new tanks
- earth bank lagoons
- lined lagoons
- slurry bags

To keep slurry in a temporary store you must:

- check planning requirements with your local planning authority
- [contact the Environment Agency](#) before construction
- agree each individual location with the Environment Agency
- install tanks, liners and slurry bags to manufacturer's instructions
- make sure the base of earth bank lagoons is above the water table – there should be at least one metre of clay subsoil beneath the proposed base
- use a trial pit to confirm the depth of the clay layer – the resulting hole must be backfilled and puddled in
- use liners where there is doubt about soil permeability – lower grade liners should suffice for temporary storage but use high grade liners in high risk areas
- monitor it to make sure there are no leaks
- locate it at least 10 metres from watercourses and land drains – use temporary trial trenches if you're unsure about the presence of land drains
- locate it at least 50 metres from groundwater sources
- de-commission it as soon as it's no longer needed

If you're using shared facilities you must:

- consider any biosecurity risks
- agree management arrangements
- agree where responsibility lies

For more information about storing slurry see [CIRIA: Livestock manure and silage storage infrastructure for agriculture](#).

## **How to spread slurry or milk**

You must spread slurry or milk:

- thinly and widely
- at an application rate not exceeding 20 m<sup>3</sup> per hectare – you must use a lower application rate if run-off could enter surface water

You must only spread slurry or milk on land with low run-off risk.

Low run-off risk land:

- has an average slope of less than 3 degrees
- does not have land drains other than sealed impermeable pipes
- has not been pipe drained, mole drained or sub-soiled in the last 12

months

- does not have a shallow soil less than 30cm above fissured rock
- has a sufficient depth and suitable type of soil above groundwater to prevent pollution
- is not within a designated groundwater source protection zone 1
- is at least 50 metres from surface water or a conduit leading to surface water
- is at least 50 metres from springs, wells and boreholes where groundwater is used for human consumption
- does not have compacted soil or a soil surface which is capped – you can only spread where the soil is permeable and has a good structure
- does not have cracked soil above a land drainage system or groundwater

If you mix slurry with milk you increase the risk of lethal or explosive gases such as methane, carbon dioxide, ammonia and hydrogen sulphide.

## **When the Environment Agency may not take enforcement action**

When exceptional weather stops you being able to comply with legislation and guidance, spreading to land may be your only viable option. If you spread slurry and milk during exceptional weather without causing pollution, the Environment Agency may decide not to take enforcement action.

You must:

- [contact the Environment Agency](#) before you spread any slurry or milk to land
- agree with them that spreading is the only option available
- only spread the amount of slurry and milk you need to reduce the risk of pollution
- carry out spreading at a rate of  $\leq 20\text{m}^3$  per hectare and on the lowest risk land available – you may be able to export the slurry and milk to neighbouring farms
- carry out regular checks before, during and after spreading to ensure there is no pollution taking place

You are still responsible for any pollution that you cause.

## **When to check back**

This guidance will be reviewed by 31 October 2018. You will need to check back then to see if it still applies.

## **Contact the Environment Agency**

### **General enquiries**

## **[Press release: Anglers urged to take care when fishing during hot conditions](#)**

With the hot weather set to continue for the next few weeks, the Environment Agency and the Pike Anglers' Club (PAC) are asking people to take extra care while fishing to help protect vulnerable fish stocks.

Prolonged hot weather can cause problems in rivers, lakes and drains such as low oxygen levels, low river flows, elevated water temperatures and algal blooms, which in turn can lead to increased levels of stress on fish populations and even fish deaths in extreme conditions.

Steve Lane, Fisheries Technical Specialist at the Environment Agency said:

The hot weather and high water temperatures can make life difficult for fish.

We're asking anglers to take particular care while fishing as the dry weather continues to help us protect fish stocks.

Please return fish to the water as quickly as possible and avoid using keepnets if practical to do so, particularly on lakes, the Broads and rivers with low flows.

Some species such as pike and barbel can be particularly vulnerable in hot conditions.

John Currie, General Secretary of the Pike Anglers' Club and Chairman of the Broads Angling Services Group's (BASG) Pike Strategy Group and Environment Sub Group, said:

PAC would ask anglers to consider the conditions caused by the very hot weather before deciding to fish.

The shallow waters of the Norfolk and Suffolk Broads, the Fens and the Somerset Levels are of particular concern, though we are also aware of problems further north.

It's not just oxygen levels that can cause fish problems in warm conditions, so we urge anglers to think carefully before fishing.

Steve added:

As ever, anglers can help us protect fish by reporting signs of dead or distressed fish, pollution or illegal fishing to the 24 hour Environment Agency Incident Hotline number 0800 80 70 60.

Anglers can find further advice and guidance from the [Pike Anglers' Club](#).
