

News story: Dry weather update – 17th July 2018

The Environment Agency continues to urge people to follow water company advice and use water wisely during these hotter summer months to help manage demand and reduce the impact on the environment. United Utilities has announced a 'temporary use ban' which is likely to come into effect in early August for its customers in the North West.

Paul Hickey, head of water resources at the Environment Agency, said:

Over two very dry months, we have seen a rapid decline in reservoir levels in the North West and we support the announcement by United Utilities to manage water supplies by introducing household restrictions.

Across the rest of England, most groundwater supplies are at healthy levels and water companies have enough water to maintain supplies if resources are managed properly.

Many rivers around the country have dropped to lower levels than normal for this time of year, which can be damaging to wildlife. We have robust plans in place to respond to these pressures and have stepped up our incident response as well as regulation of those abstracting water to ensure the environment is protected.

We are meeting with affected groups including farmers to provide practical advice about conserving water and planning for prolonged dry weather. We encourage everyone to use water wisely to conserve supplies and protect the environment.

During hot weather the Environment Agency works with water companies and other organisations to reduce the impacts of the hot weather on the environment. Steps include rescuing fish, responding to incidents, regulating water abstraction, advising businesses and farmers on water usage and monitoring for environmental impacts.

The Environment Agency also takes action to ensure water companies have made robust plans for managing water supplies, although water companies themselves would decide on proposing water restrictions.

If the public see fish gulping for air that could be because of reduced oxygen and river flows, please report it the Environment Agency incident hotline on 0800 80 70 60.

More detail on the current water situation is available on the Environment Agency's Creating a Better Place blog:

[Summer has started – what does that mean for the water situation in England?](#)

[Press release: Expansion of wildlife protection sites in Essex](#)

Two important sites for waterfowl in Essex have been afforded the strongest environmental protections available.

Allfleet's Marsh and Brandy Hole, part of the Crouch and Roach estuaries, have now been made [Special Protection Areas \(SPA\)](#), [Sites of Special Scientific Interest \(SSSI\)](#) and designated as a [Ramsar wetland of international importance](#).

Environment Minister, Thérèse Coffey said:

This is fantastic news for wildlife and the local community. The designation of this additional land into the existing protected area demonstrates that our management and stewardship of important wildlife habitats is achieving a high standard. We have committed to developing a Nature Recovery Network to protect and restore wildlife in our 25 Year Environment Plan. Through these plans we will be the first generation to leave the environment in a better state than we found it.

Both sites are now functioning as part of the Crouch & Roach Estuaries system. They support intertidal mudflats and developing saltmarsh and provide suitable habitat for the internationally important wintering water birds such as dark-bellied brent geese, lapwing, shoveler and golden plover amongst many other waterfowl species.

The Crouch and Roach Estuaries are an integral part of a continuous network of designated coastal habitats extending north from the Thames Estuary to the Colne Estuary, known as the Mid-Essex Coast.

Kate Jennings, Head of Site Conservation Policy, [RSPB](#) said:

The Essex coast used to be a place full of amazing and abundant wildlife, but over the last 400 years, land claim for agriculture, coastal erosion and rising sea levels have taken their toll. The extended designation recognises the importance of new mudflats and saltmarsh created to offset past losses, and is a major step towards restoring this spectacular place. The designation, protection and management of our finest and most valuable places for wildlife will be key in achieving this Government's 25 Year Environment Plan, and this designation is particularly welcome as it will protect areas immediately adjacent to the RSPB's Wallasea

Island Wild Coast project, where we are working with partners including Defra and the Environment Agency to create more coastal habitat for people and nature.

Approximately 95 per cent of the area of our Sites of Special Scientific Interest and about 60 per cent of the total area of our most important or 'priority' wildlife habitats is now in good condition for wildlife or has management in place to restore its condition.

Since 2011 we have established management on approximately 130,000 hectares of land to create new wildlife-rich habitat in the wider countryside.

Press release: £1m culvert repair work to reduce flood risk set to begin

The £1million culvert repair project is due to start on Monday 23 July and is expected to take 13 weeks to complete.

Environment Agency contractors, JBA Bentley, will be on site to carry out the work in the Lancashire town to make Victoria Clough culvert structurally sound.

Culverts are structures which carry water underground. They were often built to allow development to take place around them such as roads, homes and businesses. Many people live and work near culverts and may not even know they are there.

A new culvert will be installed beneath the disused railway embankment to replace the existing one which has collapsed. The team will also re-line or replace a number of sections along the length of the culvert at locations under Victoria Road and the A56 Skipton Road.

A new and improved trash screen will also be fixed at the inlet of the culvert, to help reduce the risk of it becoming blocked with debris and making it easier and safer to clear when water levels are high.

During the period of work there will be disruption to traffic using the A56 and Victoria Road. There will need to be road closures on Valley Road and New Road with local diversions and temporary traffic lights put in place, and some parking restrictions on Victoria Road.

Paul Swales flood risk advisor at the Environment Agency said:

Earby has suffered devastating flooding over recent years, most notably the Boxing Day 2015 flood. We're pleased to be starting

this repair work which will bring significant flood risk benefits to homes and businesses.

We understand that this traffic management could cause some inconvenience so we will do all we can to minimise this disruption as much as possible. We'd like to thank residents and businesses for their patience and understanding while we carry out this essential work to reduce flood risk.

Funding for the project comes from £813k of Grant in Aid and £200k of Yorkshire Local Levy.

Since the floods of Boxing Day 2015, the Environment Agency has worked in partnership with Pendle Borough Council, Lancashire County Council and Yorkshire Water to develop schemes to reduce flood risk in Earby.

Options explored

The Environment Agency continues to explore other options to reduce flood risk from all sources in and around Earby. Over the next 12 months, the team will investigate the options in more detail, which include flood storage areas on Earby Beck, the New Cut and Victoria Clough and installing a flood defence wall at Boot Street.

The Environment Agency is looking for volunteer flood wardens to play a key part in keeping Earby prepared and informed before, during and after a flood. Anyone interested in becoming a flood warden can email heather.cottrill@environment-agency.gov.uk to find out more.

By signing up to the Environment Agency's free Flood Warning service residents and businesses can receive flood alerts and flood warnings for Earby Beck and/or Earby New Cut directly to their phone and emails, 24/7. Find out if you're at risk and [register for free flood warnings](#).

Notice: WV13 20F, Scanmetals (UK) Limited: environmental permit issued

The Environment Agency publish permits that they issue under the Industrial Emissions Directive (IED).

This decision includes the permit, decision document for:

- Operator name: Scanmetals (UK) Limited
- Installation name: Scanmetals (UK) Limited
- Permit number: EPR/QP3237YA/V002
