

Guidance: Electric Vehicle Homecharge Scheme eligible vehicles

Updated: List of vehicles eligible for the Electric Vehicle Homecharge Scheme.

All vehicles that have been approved as ultra-low emission vehicles by the Office for Low Emission Vehicles are eligible for the Electric Vehicle Homecharge Scheme.

This includes vehicles which may no longer be eligible for the plug-in car grant, either because they exceed the category 2 or 3 price cap or they are no longer on sale in the UK.

A [list of the vehicles that are eligible for the plug-in car grant](#).

Guidance: Workplace Charging Scheme approved chargepoint list

Updated: List of chargepoint models approved under the Workplace Charging Scheme.

Details of manufacturers and chargepoint models approved by the Office of Low Emission Vehicles under the Workplace Charging Scheme (WCS).

Consultation outcome: Solway Firth potential Special Protection Area: outcome

Updated: Link to consultation outcome added

Special Protection Areas (SPAs) are special sites designated under the [EU Birds Directive](#) to protect rare, vulnerable and migratory birds.

The proposal is to extend the existing Upper Solway Flats and Marshes Special Protection Area (SPA) to create the Solway Firth SPA.

The proposed new boundary will include and protect the internationally important wintering populations of:

- red-throated diver
- common scoter
- goosander

The site is mainly situated in Scottish inshore waters. Scottish Natural Heritage will lead the consultation. See the details on their website using the link above.

Consultation outcome: Waste electrical and electronic equipment compliance fee 2016

Updated: Added a note on what happened after this consultation.

We want to know whether you think there should be a Waste Electrical and Electronic Equipment (WEEE) compliance fee set for 2016. We also want to know your thoughts on the two proposals we've received for how the fee should be managed in 2016.

The use of a compliance fee and how it is administered is agreed annually. Companies that don't meet their annual collection targets can comply with the 2013 WEEE Regulations by paying the compliance fee instead.
