## ESMA proposes amendments to MiFIR transactions and reference data reporting regimes

The final report contains recommendations and possible legislative amendments to MiFID II/MiFIR with a view to simplifying the current reporting regimes whilst ensuring quality and usability of the reported data. It aims to achieve this through:

- The replacement of the trading on a trading venue (TOTV) concept with the SI approach for OTC derivatives, taking into account the conclusions of ESMA's <u>Final Report on the transparency regime for non-equity</u> <u>instruments and the trading obligation for derivatives;</u>
- The removal of the short sale indicator;
- The alignment with reporting regimes such as MAR, EMIR and the Benchmark Regulation;
- The reliance on international standards, including LEIs, ISINs and CFIs; and
- The inclusion of three additional data elements with a view to harmonise the way they are reported and avoid inconsistent and duplicative reporting of the same information at the national level. In particular, these are indicators for:
  - Buyback programs;
  - Information on MiFID II client categories; and
  - Transactions pertaining to aggregated orders.

ESMA's recommendations are particularly relevant for trading venues, systematic internalisers, investment firms, data reporting services providers, and asset management companies.

## **Next Steps**

Based on these recommendations, the European Commission is expected to adopt legislative proposals. ESMA is ready to provide additional technical advice on the proposals contained in this report.
