

[Fireworks evidence base](#)

The Office for Product Safety and Standards (OPSS) has published its report on the fireworks evidence base on 29 October 2020.

OPSS has developed the evidence base by:

- drawing on existing data, literature and research
- undertaking stakeholder engagement with a wide range of organisations and groups, inviting them to submit data they can collate or have access to that is not available to OPSS or is not publicly accessible

The aim has been to seek evidence around the key issues raised in petitions, correspondence and debate. These are:

- market-related information
- noise
- injuries and accidents
- anti-social behaviour and illegal activity
- environmental information
- intelligence related to non-conformity and non-compliance with product requirements
- international comparisons

Fireworks information supplied to OPSS

OPSS is publishing information provided by organisations and existing online content drawn to its attention (highlighted in the hyperlinks below).

This is for general reference and does not represent the views of OPSS.

Please note that a number of the following materials are not Crown Copyright.

Market-related information
