

# Greens: Government resorting to 'shameless PR exercise of false information' over badger cull

# Green Party

12 November 2018

Responding to criticisms by a group of vets who have [accused the government](#) of “barefaced lies” over the effectiveness of badger culls in the South West, Green Party of England and Wales MEP Molly Scott Cato, who sits on the European Parliament’s Agriculture Committee and is MEP for the cull zones, said:

“The government are resorting to a shameless PR exercise of false information because the evidence from this cruel and ineffective cull doesn’t stack up.

“Massaging figures and cherry-picking evidence serves no one. It fails the farmers who are so deeply affected by bovine TB, it upsets the many people who are devoted to one of our iconic species, and of course inflicts terrible suffering on badgers themselves.

“Greens have always said that we need effective and scientifically grounded policy to deal with this terrible disease. We need to see tighter controls on cattle movement, strict biosecurity measures and the roll out of a vaccination programme for both badgers and cows.”
