

Isle of Wight worker dies during demolition project

Three construction companies have been fined after a worker suffered fatal injuries while demolishing a two-storey building in preparation for a development project.

Portsmouth Crown Court heard how David Shayler, an employee of Ryde Demolition Limited, was removing roof timbers by hand with a colleague, when a gable wall partially collapsed causing him to fall backwards striking his head against a stack of roof tiles.

An investigation by the Health and Safety Executive (HSE) into the incident which occurred on the 13 October 2016, found that the work was inadequately planned and managed by all the duty holders involved in the project, the technique used to remove the roof timbers was done out of sequence, and the brick gable had been left unstable. In addition, inadequate provision was made to prevent falls from height, despite concerns raised by workers in the days leading up to the incident.

Ryde Demolition Ltd of St Johns Hill, Ryde have pleaded guilty to breaching two counts of Section 2(1) of the Health and Safety at Work Act 1974 and have been fined £80,000 and ordered to pay costs of £12,132.02.

HJ Bennett Ltd of Pyle Street, Newport have pleaded guilty to breaching two counts of Section 3(1) of the Health and Safety at Work Act 1974 and have been fined £120,000 and ordered to pay costs of £12,057.62.

Stoneham Construction Limited of St Johns Place, Newport have pleaded guilty to breaching Regulation 13(1) of the Construction (Design & Management) Regulations 2015 and have been fined £56,667 and ordered to pay costs of £12,004.42.

Speaking after the case, HSE inspector Dominic Goacher said: "This was a tragic and wholly avoidable incident, caused by the companies' failure to implement safe systems of work."

“Demolition is a high-risk activity whose safe execution is complex and technical and where expertise is vital. The risk of unintended structural collapse is well known within the industry. Demolition requires careful planning and execution by contractors who are competent in the full range of demolition techniques.”

“Falls from height remain one of the most common causes of work-related fatalities in this country, and the risks associated with working at height are well known. In this case the risks of structural collapse and falling from height were not controlled, which led to the preventable death of a father-of-two.”

[HSE continues spot inspections in Oldham and Pendle](#)

The Health and Safety Executive (HSE) is carrying out further spot inspections at businesses in Oldham and Pendle to ensure all workplaces are COVID-secure as coronavirus cases continue to rise in the areas.

HSE inspectors are busy calling and visiting businesses across all different sectors in both areas putting employers on the spot and ensuring they are COVID-secure.

HSE is providing advice and guidance to manage risk and protect workers but where some employers are not managing this, HSE will take immediate action. This can range from the provision of specific advice, issuing enforcement

notices, stopping certain work practices until they are made safe and, where businesses fail to comply, this could lead to prosecution.

To be COVID-secure means businesses need to keep up to date with the latest guidance and put measures in place to manage the risk and protect workers and others. There are [five practical steps](#) that businesses can take to do that:

- Step 1. carry out a COVID-19 risk assessment
- Step 2. develop increased cleaning, hand washing and hygiene procedures
- Step 3. take all reasonable steps to help people work from home
- Step 4. maintain 2m social distancing where possible
- Step 5. where people cannot be 2m apart, manage transmission risk.

To support the understanding of the rise in coronavirus cases in the area, HSE is working alongside Pendle Borough Council and Oldham Borough Council in the regulation of workplace health and safety and alongside local public health authorities.

Sally Nicholson, HSE Head of Operations, North West, said: “While the number of confirmed coronavirus cases continues to grow in both Oldham and Pendle, we are urgently talking to local businesses to understand how they are managing risks in line with their specific business activity.

“Employers have a legal duty to protect their workers and others from harm and this includes taking reasonable steps to control the risk of coronavirus. While most businesses are following the guidelines, some are failing in their duty and neglecting to maintain things like social distancing measures and hand washing and hygiene procedures that are crucial in stopping the spread of the virus.

“Becoming COVID-secure is crucial for all businesses to tackle the rise in infection cases in the area and we will take action against workplaces that fail their duty.”

As inspections are ongoing, HSE has been utilising different ways to gather intelligence and reach out to businesses across Oldham and Pendle with a combination of site visits, phone calls and through collection of supporting visual evidence such as photos and video footage.

All businesses are in scope for inspections, that means any size business in any sector can receive an unannounced inspection.

Some of the common issues HSE inspectors are finding include: failing to provide arrangements for monitoring, supervising and maintaining social distancing, failing to introduce an adequate cleaning regime – particularly at busy times of the day – and providing access to welfare facilities to allow employees to frequently wash their hands with warm water and soap.

Francine Cheney, HSE Head of Operations for Construction, said: “While we are busy targeting businesses in Pendle and Oldham, we want all workers to remain safe in the workplace and to continue to follow government guidelines travelling to work, back at home and socially.

“This way we can help stop the spread of the virus and if any employees do get any symptoms, they should immediately self-isolate, follow the test and trace guidelines and contact their manager at work.

“By working together and ensuring that all businesses in the area are COVID-secure, we can benefit the health of the local community while supporting the local economy.”

[Manufacturing firm fined after employee fatally crushed](#)

A company, which manufactures adhesive tape, has been fined after a worker was fatally injured while operating a rewind slitting machine.

Luton Magistrates Court heard how on 10 April 2018, Mr Brett Dolby was operating the machine, designed to cut a large roll of adhesive material into narrower rolls, when he was drawn into an in-running nip between a rotating roller and the adhesive material. Mr Dolby’s colleagues found him trapped in the machine at the factory in Dunstable, having suffered fatal crush injuries.

An investigation by the Health and Safety Executive (HSE) found that Mr Dolby was required to work close to an unguarded in-running nip whilst the rewind slitting machine was in operation, which presented a hazard due to rotating parts. The risk assessment for the machine was inadequate because it failed

to identify the in-running nips and other hazards on the machine. Therefore, machine operators were provided with inadequate information and training relating to the risks associated with this operation; and employees were placed at severe risk of injury.

The company previously received advice in 2012 from both HSE and an external consultant in relation to the guarding of machinery on site, but had failed to take action to ensure the necessary guarding of the rewind slitting machine prior to the incident in April 2018.

Scapa UK Limited of Ashton Under Lyne, Manchester, pleaded guilty to breaching Section 2(1) of the Health and Safety at Work etc. Act 1974, and was fined £120,000 and ordered to pay full costs of £15,192.68.

After the hearing HSE inspector Emma Page said “This tragic incident could easily have been prevented if the company had properly assessed and applied effective control measures to minimise the risks from dangerous parts of the machinery.

“The dangers associated with in-running nips are well known, and a wealth of advice and guidance is freely available from HSE and other organisations.

“Employers should be aware that HSE will not hesitate to take appropriate enforcement action against those that fall below the required standards.”

HSE guidance on the safety requirements for plastic sheet and film winders is available here: <https://www.hse.gov.uk/pubns/ppis11.pdf>

[Bakery fined after worker suffers serious hand injury in workplace incident](#)

A bakery has been fined after an employee amputated his right hand on a bagel production line.

Luton Magistrates' Court heard how the employee was able to access the internal parts of the machine as he attempted to clear dough that had become jammed. As the dough was cleared the machine restarted dragging the victim's arm into the danger zone where his hand was amputated at the wrist.

An investigation by the Health and Safety Executive (HSE) into the incident, which occurred on 2 October 2017, found that the company did not have adequate measures in place to prevent access to the dangerous parts of the machine.

Mr Bagel's Limited of Bridge Road East, Welwyn Garden City pleaded guilty to breaching Regulation 11 of The Provision and Use of Work Equipment Regulations 1998 and was fined £4,500 and ordered to pay costs of £4,500.

Speaking after the hearing HSE inspector Nigel Fitzhugh said: "This injury was easily prevented. Machine blockages are routine events; the risk to a person from clearing them should have been identified.

"Employers should make sure they properly assess and apply effective control measures to minimise the risk from dangerous parts of machinery."

[Company fined after worker suffers serious crush injuries](#)

Leeds and Bradford Boiler Co Ltd was sentenced for safety breaches after a worker broke his upper arm and suffered crush injuries to his lower arm in a workplace incident.

Leeds Magistrates' Court heard that on 2 November 2018, Paul Madarasz was machining a two-tonne metal plate on a vertical borer machine. The metal cover plate was not sitting flush on the table due to some dirt or debris. He raised one side of the metal plate above the machine table using an overhead crane with C shaped hook so that he could clean the machine table underneath with a rag.

While he was doing this the cover plate slipped off the lifting attachment trapping his arm underneath. Mr Madarasz has had to undergo several long operations on his lower and upper arm and is unlikely to regain full function in his right arm.

An investigation by the Health and Safety Executive (HSE) found that there was no safe system of work for this activity. This specific lifting operation and cleaning activity had not been assessed, which resulted in employees using a variety of unsafe methods.

Leeds and Bradford Boiler Co Ltd of Beechwood Street, Stunningly, Leeds pleaded guilty to breaching Section 2 (1) of the Health & Safety at Work etc Act 1974. The company has been fined £120,000 and ordered to pay £7,692 in costs.

After the hearing, HSE inspector Andrea Jones said: "Lifting operations and foreseeable activities including cleaning should be properly assessed and planned. "Other employees were also at risk of injury by falling metal plates.

"This incident could so easily have been avoided by using suitable lifting accessories, implementing safe working practices, and ensuring these are followed through appropriate supervision and monitoring."
