

Farmer sentenced after walker killed by cattle

Christopher Paul Sharpe, partner in J H Sharp and Son, has been sentenced for safety breaches after an 83-year-old man was fatally attacked by cattle.

Leeds Magistrates' Court heard how on 30 May 2020, David Tinniswood and his wife were attacked by cattle whilst following a public right of way across Ivescar Farm at Chapel-Le-Dale in Carnforth.

An investigation by the Health and Safety Executive (HSE) found that the couple were walking on a footpath that passed through the yard at Ivescar Farm, following a right of way that runs from the farm down to the road. They were accompanied by two border terriers. The couple were attacked by cattle that were grazing in the field with calves at foot. The 83-year-old man was trampled and pronounced dead at the scene and his wife sustained serious injuries.

Christopher Paul Sharpe of Ivescar Farm, Chapel le Dale, Carnforth, Lancashire pleaded guilty to breaching Section 3 (2) of the Health & Safety at Work etc Act 1974. He received a prison sentence of 12 weeks, suspended for 12 months, and was fined a total of £878 and was ordered to pay £7820.30 in costs.

Speaking after the hearing, HSE inspector Julian Franklin said: "A number of measures could have been taken to safeguard walkers using the path, while cattle and calves were grazing in that field.

"Firstly, not using that field for cattle and calves. Most farmers will have other groups of stock that can graze fields containing rights of way, so can reduce the risk of incidents by putting sheep in them, or they could take fodder crops from them. Cattle with calves can be put in fields without rights of way, away from members of the public, or can be segregated from walkers.

"Farmers should ensure they take all reasonably practicable precautions to protect walkers on public rights of way, especially when they are grazing cows and calves together, or bulls are present."

Roofing contractor sentenced after worker falls from height

A roofing contractor has been sentenced after an unpaid casual labourer fell through a skylight during the renovation of an old asbestos cement roof, at an industrial building in Exeter.

Plymouth Magistrates' Court heard that on 23 October 2018, the labourer, who wanted to gain industry experience having never previously worked on roofs, was instructed by Ian Davey (trading as Exe Fibreglass) to cut fibreglass for the roof of the building. Once the fibreglass was cut, the labourer went up onto the roof to observe the fitting by Mr Davey and another colleague. He stepped on a fragile skylight, which gave way causing him to fall five and a half metres to the floor below. He suffered multiple fractures to his hand and wrist, which required surgical wiring to repair, and also fractures to his ribs.

An investigation by the Health and Safety Executive (HSE) found that the work had not been properly planned. There was a lack of training or experience in the supervision of others working at height. There were no preventative safety measures in place for the skylights such as netting, crawl boards or safety harnesses in use.

Ian Davey trading as Exe Fibreglass of Beacon Hill, Exmouth pleaded guilty to breaching Section 9(2) of the Work at Height Regulations 2005. He was given a 12 month community order, which includes 80 hours of unpaid work, and has been ordered to pay costs of £3,000.

Speaking after the hearing, HSE inspector Peter Buscombe said: "This incident could so easily have been avoided by simply using correct control measures and following safe working practices.

"Falls from height remain one of the most common causes of work-related injury and fatality in this country and the risks associated with working at height are well known."

[Suspended sentence for owner of Merseyside roofing firm](#)

A roofing company owner has been given a suspended sentence after a member of the public reported a concern regarding unsafe work at height.

Liverpool Crown Court heard how, on 5 March 2021, company owner Phillip McGinn and two workers were replacing roof tiles on a detached dormer bungalow, in Lydiate on Merseyside, without any scaffolding or edge protection in place to prevent them from falling a distance liable to cause personal injury.

An investigation by the Health and Safety Executive (HSE) found that Phillip McGinn had failed to take suitable and sufficient measures to ensure that work at height was carried out safely. He had failed to provide sufficient work equipment to prevent a fall or to minimise the distance or consequences of a fall.

The court also heard that this was not the first time that HSE had encountered poor working practices from Phillip McGinn. The HSE took previous enforcement action and prosecuted Mr McGinn for a similar offence in 2012.

Phillip McGinn of Lydiate, Merseyside, was found guilty to breaching Section 6(3) of the Work at Height Regulations 2005. He received a thirteen-month suspended prison sentence, 200 hours of unpaid work and ordered to pay costs of £1,000.

After the hearing, HSE inspector Anthony Stuart Hadfield said: "Falls from height remain one of the most common causes of work-related fatalities in this country and the risks associated with working at height are well known. Companies should be aware that HSE will not hesitate to take appropriate enforcement action against those that fall below the required standard".

[Recycling company fined after 18-year-old employee injured](#)

A recycling company has been fined after an employee was injured whilst clearing a blockage in a waste metal chute.

Shrewsbury Crown Court heard how, on the 9 October 2017, an employee of PG Skips Limited was injured when he fell through a chute, approximately four metres above a concrete yard, whilst clearing a blockage. Another employee, who was waiting in a telescopic handler to collect the waste metal in the machine bucket, saw him fall and moved the machine to try and catch him. The employee was hit by the bucket and sustained injuries including several broken bones.

An investigation by the Health and Safety Executive (HSE) found that there was no risk assessment or safe system of work in place for clearing blockages. The company had not considered the risk of employees falling through the chute from that height.

PG Skips Limited of The Lowe, Wem, Shropshire were found guilty of breaching Section 2 (1) of the Health and Safety at work Act 1974 and have been fined £17,500.

Speaking after the hearing, HSE inspector Sarah Baldwin-Jones said: "This significant injury to an 18-year-old employee in his first employment could have been easily prevented. The remedial action taken to prevent future blockages implemented after the incident had no cost implication for the company. Employers should make sure they properly assess and apply effective control measures to minimise risks from clearing blockages."

[Landlord fined for not providing gas safety certificates](#)

A landlord has been fined for failing to ensure that gas fittings, appliances and associated flues were checked for safety.

Edinburgh Sheriffs Court heard that from late winter 2013 to early spring 2014 David Mackman stated he was the landlord for at least 15 flats in an old tenement block. The majority of the flats had gas central heating boilers for heating and hot water. Some of the boilers served more than one flat. The court was told tenants were not provided with Landlord's Gas Safety Certificates.

The Health and Safety Executive (HSE) investigated after receiving a complaint from a tenant. The HSE inspector failed to obtain a response from Mr Mackman and on being unable to contact the complainant attended the block of flats with another HSE inspector.

The inspectors gained access to several flats and quickly identified gas safety concerns. They again attempted to make contact the landlord during this visit but failed. Due to the gas safety concerns the inspectors decided to contact the Gas Safe Register, the official gas safety organisation in Britain, who arranged for Scottish Gas Networks (SGN) to attend the property.

The inspectors later revisited the property with SGN engineers and after gaining access to further flats they identified further gas safety faults. SGN issued 'immediately dangerous' safety notices and disconnected the gas supply to several properties.

Despite repeated attempts to contact him, the landlord did not attend the flats to assist with the investigation.

At a later visit SGN notices were again issued to a number of flats. Mr Mackman attended during this visit and HSE Inspectors issued 15 Improvement Notices. The aim of the notices was to ensure all gas safety issues were identified and rectified by a competent Gas Safe registered engineer which would enable the landlord to provide tenants with a Landlord's Gas Safety Certificate.

David Stuart Mackman, Shepherd's Keep, Colzium, Kirknewton pleaded guilty to breaching Regulation 36(3)(b) of the Gas (Installation and Use) Regulations 1998 and was fined £4,500 and ordered to pay a £175 Victim Surcharge.

Speaking after the hearing, HSE inspector Katherine Gostick said: "It was very fortunate that Mr Mackman's failure to carry out important landlord gas safety checks did not result in a number of deaths in the flats he rented out, where the unsafe gas appliances were leaking poisonous odour free fumes.

"He should have employed a competent Gas Safe Registered engineer to carry out landlord gas safety checks including carrying out the necessary work and obtain a landlord gas safety certificate every 12 months. Landlords may be prosecuted if they do not ensure that this well publicised duty is carried out. Tenants should check that they receive a landlord gas safety certificate on moving into rented property and annually.
