

Yoghurt and dessert manufacturer prosecuted after agency worker's fingers amputated

A food company specialising in dairy products has been prosecuted after an agency worker suffered severe injuries when their fingers were caught in machinery.

Walsall Magistrates' Court heard that following the incident on 12 July 2016, an agency worker had to have their middle finger amputated below the second knuckle, lost half their index finger and had their third finger amputated to the first knuckle. The agency employee was working as a box maker on a machine known as a tray erector, at the company's Minsterley site in Shropshire, when the incident occurred.

An investigation by the Health and Safety Executive (HSE) found that the in-running nip on the tray erector was not properly guarded. The company had failed to guard dangerous parts of the machine to prevent access for more than seven years.

Müller UK & Ireland Group of Minsterley, Shrewsbury pleaded guilty to breaching Regulation 11(1) of the Provision of Use of Work Equipment Regulations 1998. The company was fined £66,000 and ordered to pay costs of £5,024.20.

Speaking after the hearing, HSE inspector Andrew Johnson said: "This preventable incident could have easily been avoided had the company properly assessed and applied effective control measures to minimise the risks from dangerous parts of the machinery.

"The dangers associated with in-running nips are well known, and a wealth of advice and guidance is freely available from HSE and other organisations."

[Theme park fined after child seriously injured on a ride](#)

Lightwater Valley Attractions Ltd has been fined following an incident where a child was thrown from its Twister ride.

York Magistrates' Court heard that on 30 May 2019, a child was ejected from the Twister ride at Lightwater Valley Theme Park in Ripon, North Yorkshire resulting in serious head injuries.

An investigation by the Health and Safety Executive (HSE) found that although the theme park's procedures for the Twister ride stated that those between 1.2m and 1.5m tall must wear seat belts, several children under 1.5m in height were not wearing seat belts on this ride. This was seen in CCTV footage over several days and mentioned in statements by members of the public. On examination of the restraining systems, many belts were not functioning correctly. On several occasions, the final position of the lap bar restraint allowed significant gaps to remain in the containment and did not fully contain smaller passengers.

Lightwater Valley Attractions Ltd, registered in Acreman Street, Sherborne, Dorset pleaded guilty of breaching Section 3(1) of the Health and Safety at Work etc. Act 1974 and was fined £333, 344 and ordered to pay costs of £16,183.

Speaking after the hearing, HSE inspector Andrea Jones said: "A child suffered life-changing head injuries at Lightwater Valley theme park.

"Our investigation found that the theme park did not implement suitable operating procedures and monitoring of ride operators in relation to the ride restraints.

"This was an entirely avoidable incident. Several children were put at risk and Lightwater Valley has now been held to account for their failings."

The child's mother spoke of how 'the little boy I took to Lightwater Valley

that day is not the same boy that woke up after the surgery. I still grieve for my little boy.'

[Company fined after worker suffers crush injury](#)

Chemical company, Reckitt Benckiser Healthcare (UK) Ltd (Reckitt Benckiser Ltd), was fined for safety breaches after a worker had his left arm crushed in a bottle filling machine.

Grimsby Magistrates Court heard how on 9 September 2017, the 25-year-old worker suffered an open crush injury to his left forearm at the company's site in Dansom Lane South, Kingston upon Hull. He also sustained tendon damage to the forearm, wrist and hand.

An investigation by the Health and Safety Executive (HSE) found that the filling machine had not been electronically isolated and locked off by the injured person, or other persons, which would have ensured that the recalibration task could be carried out in a safe manner.

Reckitt Benckiser Ltd of Dansom Lane, Hull pleaded guilty to breaching Section 2 (1) of the Health & Safety at Work etc Act 1974. The company has been fined £200,000 and ordered to pay £8,261.28 in costs.

Speaking after the hearing, HSE inspector David Stewart said: "Non-routine maintenance tasks must be carried out by trained personnel working to standard safe operating procedures.

"Reckitt Benckiser should have developed a standard operating procedure for the adjustment process, which if implemented correctly along with their lock off procedure, could have prevented the incident."

[HSE statement following incident at water recycling centre in Avonmouth](#)

The Health and Safety Executive (HSE) remains at the site of a water recycling centre in Avonmouth following yesterday's fatal explosion.

HSE is fully supporting the investigation into the incident, for which Avon and Somerset Police have primacy.

Giles Hyder, HSE's head of operations in the South West said:

"We send our deepest condolences to the families of those who tragically died. It is important a joint investigation is carried out.

"We will provide specialist support to what is likely to be a complex investigation under the command of the police."

[Company fined after worker develops serious respiratory illness](#)

An engineering company has been fined after a worker developed hypersensitive pneumonitis, a serious and irreversible respiratory illness, as a result of occupational exposure to welding fumes and metal working fluid over a 30-year period.

Liverpool Magistrates' Court heard how the welder-fabricator employed by PYC Engineering Ltd was at risk of inhalation of welding fumes and metal working fluid mists, potentially containing harmful bacteria. This exposure over his 30 year career with the company led to the development of the condition, which has seriously impacted the employee's life, preventing work and making oxygen necessary for day to day tasks. He is currently being assessed to ascertain whether a lung transplant would be beneficial.

An investigation by the Health and Safety Executive (HSE) found the company had failed to implement industry standard control measures such as Local Exhaust Ventilation (LEV), Respiratory Protective Equipment and a management system for the metal working fluids.

Fluid systems, which contain water or water-mixes can become highly contaminated with harmful bacteria and must be monitored and controlled. Had these measures been observed, development of the illness could have been prevented.

PYC Engineering Ltd of Eastside Industrial Estate, Jackson St, St Helens pleaded guilty to a breach of Section 2(1) of the Health and Safety at Work etc. Act 1974. The company was fined £10,000 and ordered to pay costs of £9,555.29.

Speaking after the hearing, HSE inspector Lianne Farrington said: "Companies should be aware of the need for a management regime in order to prevent occupational ill health and that failure to control exposure to metal working fluids and welding fumes can result in serious and irreversible respiratory illness."
