

[South Wales Police fined after employee injured during cable installation](#)

South Wales Police has been fined after an employee received an electric shock whilst installing computer data cables.

Cardiff Magistrates' Court heard that on the 16 October 2015, at Bridgend Police Station, Brackla Street, a 48-year-old civilian employee sustained damage to his heart muscles when he came into contact with an exposed end of a live 3-core electrical cable which had been left in a ceiling void.

An investigation by the Health and Safety Executive (HSE) found the Force had failed to ensure the electrical system was safe and that the ceiling void was a safe place of work.

South Wales Police Headquarters, Bridgend was found guilty of breaching Section 2 (2) of the Health and Safety at Work etc Act 1974, was fined £64,000 and ordered to pay £29,449.14 in costs.

Speaking after the hearing, Neil Craig HSE's head of operations commented: "This incident could so easily have been avoided by simply carrying out correct control measures and safe working practices.

"Police forces have the same duties under health and safety legislation as any other employer. It was appropriate for HSE to bring this matter before the courts given the avoidable, life-changing injuries suffered by their employee."

Two companies fined after worker dies in Camden explosion

Materials Movement Ltd and P J Labour Services Ltd have been fined after a worker was killed in an explosion at a demolition site.

Westminster Magistrates' Court heard how, on 16 March 2017, 54-year-old Stephen Hampton, working at a site on Swains Lane in Camden, London, was killed when an old fuel storage tank he was cutting up exploded and the end of the vessel struck him causing fatal injuries.

An investigation by the Health and Safety Executive (HSE) found both contractors failed in their duties to effectively plan, manage and monitor control measures to address the risks associated with the demolition of a site that contained fuel tanks. The standards for this type of work are well known, established and clear.

Materials Movement Ltd of Clifton Road, Henlow, Bedfordshire pleaded guilty to breaching Regulation 15(2) of Construction (Design and Management) Regulations 2015 and has been fined £33,000 and ordered to pay costs of £7,675.38.

P J Labour Services Ltd of Technology Park, Colindeep Lane, Colindale, London pleaded guilty to breaching Regulation 15(2) of Construction (Design and Management) Regulations 2015 and has been fined £33,000 and ordered to pay costs of £7,648.18.

Speaking after the case, HSE inspector Ian Shearring said: "Mr Hampton had recently adopted two young boys and this incident leaves them, along with his wife, alone and struggling financially all for the sake of a bit more effort on both defendant's parts. Both Materials Movement Ltd and P J Labour Services Ltd have today been held to account for killing Mr Hampton after failing to take adequate action to protect the health and safety of persons working on their site".

"Neither company adequately assessed and controlled the risks of this highly dangerous work. It was left to the workers to devise their own methods of

working, which was compounded by no site management.

[Airline company sentenced for unsafe operation of a passenger lift](#)

Flybe Ltd has been fined today after an investigation into a worker falling into a lift shaft at Exeter Airport uncovered health and safety failings.

Exeter Magistrates' Court heard that on 15 May 2016, a 34-year-old employee was moving a loaded lift trolley in the tool department of Hanger 2 when he fell into the lift shaft to the bottom floor and suffered injuries.

Although the exact cause of the incident could not be established, the HSE investigation found that the lift doors had a fault which meant that they defaulted to locked. As a result, the emergency door release key was being routinely used by employees to bypass the fault and therefore the lift's safety devices.

Flybe Ltd of New Walker Hanger, Exeter Airport pleaded guilty to breaching Section 2(1) of the Health and Safety at Work Act 1974 and has been fined £100,000 and ordered to pay costs of £9,963.16.

Speaking after the hearing HSE inspector Emma O'Hara said: "Despite a fault, busy workers who were moving parts and tools felt compelled to keep the lift in use. The safety features of the lift were therefore made redundant.

"The lift should have been taken out of service or an alternative system of work should have been in place, and this should have been communicated.

“HSE will not hesitate to take appropriate enforcement action against those that fall below required standards.”

[Council fined after worker falls from stepladder](#)

Central Bedfordshire Council has been sentenced after a worker fell from a roof.

Luton Magistrates’ Court heard that on 19 December 2017, the injured person was climbing on to the roof of a school from a stepladder to retrieve a child’s shoe when he fell. He sustained eight broken ribs, a grade four lacerated liver and a punctured lung.

An investigation by the Health and Safety Executive (HSE) found that the Council did not have a risk assessment or safe system for working at height in place to retrieve items from the roof.

Central Bedfordshire Council of Priory House, Monks Walk, Chicksands, pleaded guilty to breaching Regulation 4 (1) of Work at Height Regulations 2005 and was fined £9,308.00 with £7,699.32 costs .

Speaking after the hearing HSE inspector, Rubeena Surnam, said: “Falls from height remain one of the most common causes of work-related fatalities in this country and the risks associated with working at height are well known.

“Those in control of work have a responsibility to devise safe methods of working and to provide the necessary information, instruction and training to

their workers. If a safe system of work had been in place prior to the incident, the serious injuries sustained by the employee could have been prevented.”

[Engineering company fined after employee fall](#)

An engineering company has been fined after a 31-year-old employee fell through a hole in a mezzanine floor during construction work being carried out in Bristol.

Bristol Magistrates’ Court heard that on 13 November 2018, an employee of N&C Engineering Services Limited was involved with the installation of flooring at Albion Dockside Works, Hanover Place, Bristol. An opening had been cut in the boarded-out mezzanine floor through which the employee fell three metres to the ground, suffering serious head injuries.

An investigation by the Health and Safety Executive (HSE) revealed that the contractor failed to adequately plan, manage and monitor the construction work, so as to ensure that appropriate methods to prevent or mitigate a fall during the construction work, were in use.

Now-liquidated, N&C Engineering Services Limited of Binegar, Radstock, Somerset was found guilty of breaching Regulation 4(1) of the Work at Height Regulations 2005 and has been fined £1,000 and ordered to pay costs of £1,000.

Speaking after the hearing, HSE inspector, Ian Whittles said: "This incident so easily could have been avoided by simply carrying out correct control measures and safe working practices.

"Companies should be aware that HSE will not hesitate to take appropriate enforcement action against those that fall below the required standards."
