

Builder sentenced after young worker seriously-injured

A builder from Cornwall has been sentenced after one of his employees sustained serious, life-changing hand injuries whilst operating a handheld circular saw.

Bodmin Magistrates' Court heard how David Avent, trading as David Avent Building Services, undertook a barn refurbishment in Callington during February 2017. On 7 February, a worker, who had recently turned 17, was using a circular saw to cut wooden flooring sheets when the blade made contact with his hand causing serious, life-changing injuries. The saw blade cut fully through his index finger, three quarters through his middle finger and half way through his ring finger.

An investigation by the Health and Safety Executive (HSE) found David Avent had no record of any information, instruction and training that he had provided to his employee in the safe use of the circular saw nor had he ensured that safe working practices were followed when cutting the flooring sheet. The investigation also found that circular saw blade had not been properly adjusted for the size of material being cut at the time of the incident and the flooring sheet was not appropriately supported whilst being cut.

David Avent of Callington, Cornwall pleaded guilty to breaching Section 2(1) of the Health and Safety at Work etc Act 1974 and Regulation 3(4) of the Management of Health and Safety at Work Regulations 1999. He has been fined £1,120 and ordered to pay costs of £8489.48.

Speaking after the hearing, HSE inspector Dr Jo-Anne Michael said: "This injury was easily preventable and the risk associated with the task should have been identified."

"Employers should make sure they properly assess and apply effective control measures to minimise the risk from contact with dangerous parts of machinery to ensure that the risks are given careful attention to ensure they are properly controlled."

[Company fined after worker seriously injured when repairing machinery](#)

A quarry operator has been fined after an employee had his hand and arm caught in a conveyor belt.

Lochmaddy Sherriff Court heard how, on 2 November 2016, employees of MacAulay Askernish Limited were undertaking maintenance work on the conveyor belt of a screener unit that was slipping at Askernish Quarry on the Isle of South Uist. One of the workers, Donald Campbell, was leaning through the opening in the conveyor frame when his hand was pulled into the nip point between the drive drum and conveyor belt. His arm quickly became entangled in the mechanism, causing severe injury, permanent disfigurement and impairment.

An investigation by the Health and Safety Executive (HSE) found the guarding of the screener unit was not adequate. The investigation also found the company failed to have in place a suitable procedure for the isolation of the screener unit and to ensure the unit was maintained in good repair as other guard panels were not in place.

Macaulay Askernish Limited of Hillside Office, Lochboisdale, Isle of South Uist, pleaded guilty to breaching Regulation 6(1) of the Quarries Regulations 1999 and has been fined £30,000.

Speaking after the hearing HSE inspector, Mike Tetley said: "This injury was easily preventable and the risks from this type of equipment are well-known.

"Companies operating belt conveyors must ensure access has been prevented to dangerous parts and that guards are properly maintained. Having a secure isolation procedure in place is also an essential control when undertaking maintenance work."

[Businessman sentenced after failing to prevent exposure to asbestos](#)

A Manchester-based businessman has been prosecuted after failing to check whether asbestos was present in a building he owned before starting major refurbishment works.

Manchester Magistrates' Court heard how Mr Whaid Ahmed did not survey his property at 1-3 Stephenson Square, Manchester for asbestos before carrying out renovations to the building between 1 April 2012 and 12 October 2017. Following a routine inspection from a Health and Safety Executive (HSE) inspector, a survey was subsequently carried out. Large amounts of asbestos, some of which was in very poor condition, was discovered on the premises, indicating that asbestos could have previously been removed without any controls in place from areas of the building already renovated.

The HSE investigation found Mr Ahmed failed to identify the risks involved, and put appropriate measures in place to prevent exposure to asbestos. Mr Ahmed has had previous enforcement action from HSE over a similar issue so was well aware of his duties under the law.

Mr Whaid Ahmed of Hale Barns, Altrincham pleaded guilty to breaching Regulations 5(a), 11(1)(a) and 16 of the Control of Asbestos Regulations 2012. Mr Ahmed was given a six months prison sentence, suspended for two years, sentenced to 250 community service hours and ordered to pay costs of £5,742.14.

HSE inspector Matt Greenly said after the case: "This case highlights the importance of surveying a property for asbestos to prevent risk to anyone occupying or working in that building and to reduce the risk of exposure to asbestos and contracting incurable diseases as a result of that exposure."

[Company and director sentenced after resident injured](#)

A Cornish construction company and its director have been sentenced after a resident fell through the balcony at his home during recent refurbishment work.

Truro Magistrates' Court heard how, on 18 August 2016, 58-year old Simon Powell, who has impaired mobility and suffers from epilepsy, had been sitting on the balcony at his property when he fell more than three metres through a plastic panel, which had been installed within his balcony and onto the beach below. Mr Powell suffered multiple fractures and damage to his liver. ChristalClearProperties Ltd had been working on the refurbishment of the neighbouring riverside property which included changes to that property's balcony which required it to be extended to join that of Mr Powell's. Sheets of plywood and plastic were used to temporarily infill the completed balcony framework prior to the toughened safety glass infills being fitted.

An investigation by the Health and Safety Executive (HSE) found that in the absence of safety glazing, the fall prevention measures were inadequate and there were no measures in place to prevent access to the balcony until the construction work had been completed. The investigation also found there was no construction phase plan in place and no specific risk assessment for the use of plywood or plastic as an interim measure. The plastic sheeting that had been used was an unsuitable material as it did not afford Mr Powell any impact protection.

ChristalClearProperties Ltd of Langurtho Road, Fowey, Cornwall pleaded guilty to breaching Section 3(1) of the Health and Safety at Work Act 1974 and has been fined £22,000 with costs of £4,782.72.

Anthony John Ham of Langurtho Road, Fowey, Cornwall pleaded guilty to breaching Section 37 of the Health and Safety at Work Act 1974, and has been given a 12 week prison sentence, suspended for 12 months. He was also ordered to pay costs of £4782.72.

Speaking after the hearing, HSE inspector Georgina Speake said: "This incident could so easily have been avoided by simply carrying out correct

control measures and safe working practices.

“Falls from height remain one of the most common causes of work related fatalities/injuries in this country and the risks associated with working at height are well known.”

[Construction firms targeted in new health inspections](#)

Construction firms across Great Britain will be targeted on their health standards by the Health and Safety Executive (HSE) it has been announced.

These inspections will be the first time the regulator has targeted the industry with a specific focus on respiratory risks and occupational lung disease, looking at the measures businesses have in place to protect their workers’ lungs from the likes of asbestos, silica and wood dust.

Inspectors will be visiting construction businesses and sites across the country throughout October and will specifically be looking for evidence of construction workers knowing the risks, planning their work and using the right controls, and if necessary will use enforcement to ensure people are protected.

HSE’s Peter Baker, chief inspector of construction said:

“Around 100 times as many workers die from diseases caused or made worse by their work than are killed in construction accidents. Annually, work-related cancers, mainly linked to asbestos and silica, are estimated to kill 3,500 people from the industry. Thousands of others suffer life-changing illnesses from their work. Not all lung diseases take years to develop. Some, like acute silicosis or occupational asthma, can occur more quickly.

“As a result, we’ve launched this inspection initiative to find out what exactly businesses in the construction industry are doing today to protect their workers’ health, particularly when it comes to exposure to dust and damage to lungs.

“We want construction workers to be aware of the risks associated with the activities they carry out on a daily basis; be conscious of the fact their work may create hazardous dust; and consider how this could affect their health, in some cases irreversibly. We want businesses and their workers to think of the job from start to finish and avoid creating dust or disturbing asbestos by working in different ways. We want to see construction firms encouraging their workers to firstly keep the dust down and wear the right mask and clothing.

“Ultimately, we want construction workers’ lungs to be protected from ill health, so they can go home healthy to their families and enjoy long careers in this important industry.”
