

# Company fined after a scaffolder was injured in fall from height.

A scaffolding company has been sentenced today for safety breaches after a worker fell approximately four metres while working on a fragile surface.

Hull Crown Court heard how in May 2013 Acorn Scaffolding (Yorkshire) Ltd were carrying out the erection of scaffolding on a barn at Lockington Grange Farm Driffield.

The injured worker fell four metres through a fragile roof light on an asbestos cement sheet roof sustaining several injuries including the dislocation and fracture of his right wrist, crushed nerves in his left wrist, broken nose and sprains to his shoulder and ankle.

An investigation by the Health and Safety Executive (HSE) found that Acorn did not identify that workers were working on a fragile roof so they failed to put in place any measures to prevent falls through the fragile surfaces.

Acorn Scaffolding (Yorkshire) Ltd of Moxon Way, Moor Lane Trading Estate, Sherburn in Elmet pleaded guilty to breaching Section 2(1) of the Health and Safety at Work Act 1974 and has been fined £33,333.33 and ordered to pay £14,638.40 in costs.

After the hearing, HSE inspector Jayne Towey commented: "Working on a fragile roof carries a risk of a person falling through it. This is a known risk within the industry and this accident could have been prevented.

"Such measures would include ensuring that suitable guard rails are erected to prevent a person accessing the fragile roof area'

# Company fined for exposing employees to dust

A furniture manufacturer has been fined after exposing its employees to significant quantities of hardwood dust, a hazardous substance known to cause occupational asthma and nasal cancer.

Luton Magistrates' Court heard how employees in Andrena Furniture Ltd's workshop were exposed to hardwood dust on a daily basis. One of the reasons for such high levels of the hazardous substance was found to be the company's extraction system, which when tested was found to be inefficient during a HSE inspection in 2016.

An investigation by the Health and Safety Executive (HSE) also found that following previous visits, and verbal and written advice, the company failed to ensure standards achieved following previous inspections were maintained. The investigation also found the company should have identified its workshop contained significant quantities of hardwood dust and then do all that it could to reduce exposure to its employees, including ensuring extraction was working efficiently and implementing a robust cleaning regime.

Andrena Furniture Ltd of Geddings Road, Hoddesdon, Herts pleaded guilty to breaching Regulations 7(1) and 9(2)(a) of the Control of Substances Hazardous to Health Regulations 2002 and was fined £8,000. The company was also ordered to pay costs of £1081.40.

Speaking after the hearing, HSE inspector Sandra Dias said: "Andrena Furniture Ltd was fully aware of the health and safety standards it needed to maintain.

"Breathing in dust can cause life-changing lung disease or make existing conditions worse. Thousands of people die from work-related lung diseases every year, often due to continued exposure over a long period of time.

"Everyone has the right to go home healthy from work and employers must do the right thing to protect their workers and ensure this happens.

"This case should serve as a warning to others that HSE takes seriously repeated breaches of health and safety law that exposes employees to health risks."

## [Company fined after worker loses tip of finger](#)

A metal fabrication company was sentenced today after a worker was injured when using a vertical milling machine.

Sunderland Magistrates' Court heard how, on 7 December 2016, an employee of Complete Maintenance Solutions Limited was using the machine to drill a hole in a number of metal fence posts. While doing this the glove on her right hand touched the spinning drill bit and became entangled with it. This entanglement resulted in the amputation of the tip of her right ring finger to the first knuckle.

An investigation by the Health and Safety Executive (HSE) found the company had not properly guarded the machine to prevent accidental contact with the moving spindle and drill bit.

Complete Maintenance Solutions Limited of Tower Road, Glover Industrial Estate, Washington pleaded guilty to breaching Regulation 11(1)(a) of The Provision and Use of Work Equipment Regulations 1998 and was fined £4,000 with £957.65 in costs.

Speaking after the hearing, HSE inspector Christopher Lucas said: "This injury could easily have been prevented had the company put in place simple guarding measures. This should serve as a lesson to others in the metalworking industry about the importance of effectively guarding their machinery to stop others being similarly injured."

## [Fisheries owner fined after putting workers and the public at risk](#)

The owner of a local fisheries site has been fined for failing to secure the boundary of a new build local fisheries site whilst under construction.

Manchester Magistrates' Court heard how Michael Simpson, who directed operations at the site known as Cheshire Oaks Fisheries, had received a £72,000 grant towards the development of a fisheries site in Backford, Cheshire. The Rural Payments Agency, who monitored the grant scheme, had visited the site in 2015 and identified a number of risks including those to the public. Open gates and entry points with a lack of suitable and sufficient fencing to the site provided easy access to excavated lakes, some containing deep water, coupled with unsecure heavy plant machinery, were just some of the many poor standards found at site.

On 14 July 2015, HSE visited the site after the concern was raised and several enforcement notices were issued. Shortly after this visit, the company changed its name from Cheshire Oaks Fisheries Ltd to Rural Development Programme Limited despite Michael Simpson still directing work at the site. Written correspondence from HSE for a re-visit was ignored and entry through the main site gates was refused once additional security measures had finally been put in place, some four years after work commenced.

An investigation by the Health and Safety Executive (HSE), found Michael Simpson had failed to put in place the necessary control measures and failed to manage safe working practice effectively during the construction phase thus putting not only workers at risk, but members of the public also.

Michael Simpson of, Ellesmere Port, Cheshire, was prosecuted under Section 37 and pled guilty to breaching Section 3(1) and 33(1) of the Health and Safety at Work Act 1974 and has been fined £594 and ordered to pay costs of £10,209.

Speaking after the hearing, HSE inspector Phil Redman said: "The defendant in this case failed to protect his workers and members of the public from risk. Companies should be aware that HSE will not hesitate to take appropriate enforcement action against those that fall below the required standards."

## [Construction company fined after death of worker](#)

Tonic Construction Ltd has been fined following the death of Shaun Carter.

Cheltenham Magistrates' Court heard how the employee of Tonic Construction Ltd was driving a forward tipping dumper on Tuesday 31<sup>st</sup> May 2016 onto the top of a spoil heap. The dumper became stuck on the edge of the spoil heap, and when Mr. Carter jumped off the vehicle, it flipped over striking Mr. Carter who sustained serious head injuries which he died from at the scene.

An investigation by the Health and Safety Executive (HSE) into the incident found that it was practice on this and other sites for dumpers to access spoil heaps with no barriers to prevent over-running. To compound the situation, an excavator had removed some of this particular spoil heap creating a sheer face.

Tonic Construction Ltd pleaded guilty to breaching Regulation 2 (1) of The Health and Safety at Work Act 1974 and have been fined £200,000 plus a victim surcharge of £170 and ordered to pay costs of £5565.80.

Speaking after the hearing HSE inspector Sue Adsett said: "Risks associated with the creation of spoil heaps had not been suitably and sufficiently assessed. Either the company should have decided on a safer method which avoided the need for the dumper to access spoil heaps (as they have done after the accident), or they should have introduced stricter management arrangements which would have included bunds at a safe distance from the edge."
