

# Farmer fined after dog walker thrown 8ft into the air and trampled by cow

A DOG walker was thrown 8ft into the air by a cow which then repeatedly trampled on him as he tried to crawl away, breaking six ribs of his ribs and leaving him with damage to his lungs and spleen.

Steve Adams, from Coleshill, Warwickshire, was on holiday with his wife Jane near Sidbury, East Devon when they went for a walk with their Springer Spaniel, named Lisa.

They were walking along a public footpath through a field containing cows with calves when one of the cows attacked, leaving Steve badly injured. He spent seven days in intensive care.

The farmer responsible for the cattle has been ordered to pay a fine and costs totalling more than £3,500.

Farmers should not put cattle with young calves in fields with a public right of way. The Health and Safety Executive (HSE) has [advice for farmers, landowners and other livestock keepers](#) on dealing with the risks posed by cows with calves.

Steve, who is now 63, and is a dad of three with two grandchildren, is retired from the transport industry. He said: "My own grandfather was a farmer, so I'd been around cattle as a child, and I wasn't scared of them. Now, I wouldn't go into a field with cows, you don't know what's going to happen. People should be very wary of cows."

Steve and Jane were on holiday at the East Devon caravan and motorhome campsite in July 2021 when they decided to go for a walk with their dog, which was on a lead.

Their route took them from a pub through fields. As they headed towards a pedestrian gate at the edge of one of the fields, they came to an electric fence surrounding the fields edge.

They were then surrounded by more than 20 cattle, some with calves. A cow approached, lowered its head and tossed Mr Adams into the air. It then trampled him on the ground until he managed to crawl away.

A HSE investigation established that cattle with young calves were being kept in a field with a public right of way across it. Cattle with young calves are known to be protective and unpredictable, and can pose a risk to walkers, especially to those with dogs. Farmers should not put cattle with young calves in fields with a public right of way.

Steve Adams said: "It was just the one cow, the biggest one. It came up and threw me into the air with its head and then it trod all over me. I was trying to crawl out of the way, but it just kept landing its hooves on me.

“The dog was on its lead and I’d managed to let it go and it made it away. My wife had one of those plastic ball throwers for the dog and she was hitting the cow with it but it made no difference at all. I managed to roll away from under it.

“I wasn’t feeling too good at all, I couldn’t breathe. It had taken us about 15 minutes to walk to where it happened, but it took us about two and half hours to make it back to the van. An ambulance was called to the site and they said straight away that I’d broken my ribs. It was a pretty scary day.

“I don’t walk too much now. I’m not as healthy as I was, and I can still feel my injuries now.”

Barry Fowler, of Sidbury, Sidmouth, pleaded guilty to breaching Section 3(2) of the Health & Safety at Work etc Act 1974 and was fined £555 and ordered to pay costs of £3,000 at Exeter Magistrates’ Court on 8 March 2023.

HSE inspector Simon Jones said: “The serious injuries to Mr Adam sustained when he has attacked and trampled by cattle with their calves was totally preventable.

“Cattle are extremely protective of their calves and even calm cattle can become aggressive if they think the calves may, in any way, be threatened, even by members of the public walking past.

“Farmers should not place cattle with calves in fields where members of the public have a legal right to walk unless appropriate measures are in place such as robust fencing separating cattle from people. Had Barry Fowler done this then the incident could not have happened.”

## **[Campaign launched to reduce farm vehicle deaths and injuries](#)**

- **Vehicle incidents are the number one cause of deaths and serious injuries in British agriculture**

- **Forty-eight lives lost in farm vehicle incidents in last five years, hundreds injured**
- **Health and Safety Executive (HSE) launches campaign to reduce injuries and save lives**

Vehicles play a vital role in farm work but incidents involving vehicles are the number one cause of deaths and serious injuries on British farms.

Incidents involving moving vehicles have been responsible for 30 per cent of all fatalities on farms over the past five years, that's 48 lives lost in incidents that have destroyed farming families.

And hundreds more are hurt in incidents involving moving vehicles on farms every year.

The Health and Safety Executive (HSE), Britain's workplace safety regulator, is calling on everyone in the farming community to do what they can to reduce the number of injuries involving vehicles and save lives.

HSE is this week launching a farm vehicle safety campaign and has created a [website](#) which brings together lots of great advice on using vehicles safely on farms.

HSE says there are three pieces in the vehicle safety jigsaw: operating a safe farm, maintaining a safe vehicle and being a safe driver.

Together, these pieces will help to keep everyone on farms safer. If one piece is missing, the risks increase.

Sue Thompson, HSE's Head Agriculture Policy, said: "We want to make 2023 a safer year on our farms by working together to prevent injuries and deaths.

"Agriculture consistently has the highest number of fatal and serious injuries of all industry sectors in Great Britain. Over the past five years, the average fatal incident rate is twenty-one times higher in agriculture than the average across all other industries. That is a shocking statistic.

"It's time for us to make a change together to make our farms safer, and that's why we're asking farmers in England, Scotland and Wales to consider three areas of their daily farming activities and take the right actions to prevent another farming tragedy."

Operating a Safe Farm - Keep people and vehicles apart:

- Segregate vehicles and people with clearly marked routes and walkways to keep them apart to avoid serious injuries.
- Use barriers and posts in high traffic areas to protect people and save lives.
- Use signage, good lighting and a high visibility clothing to help everyone be seen on the farm.

Maintaining a safe vehicle - Detect faults now, before it's too late:

- Regularly check and maintain brakes. Trailers must have brakes designed for the maximum loads and speeds at which they will operate.
- Ensure a seatbelt is fitted and worn every time.
- For vehicles which have doors fitted as standard, make sure the doors are attached securely and remain closed when the vehicle is moving.
- For vehicles that have mirrors fitted as standard, double check they are fitted securely and are clean to ensure optimum visibility.

Being a safe driver - Pause, take a moment to be a safer driver:

- Use the handbrake every time. To prevent serious injury if your vehicle moves due to the terrain or gradient, follow the simple safe stop routine before you get out or off a vehicle: handbrake on, gears in neutral, engine switched off and the key removed.
- Ensure you've been trained properly; training is vital to help keep everyone safe.
- Think visibility to protect everyone on the farm, whatever the vehicle - ensure mirrors and windows on the vehicle are clean and when manoeuvring, take a moment to consider where the blind spots are. Keep people away while you are moving, get people to stand where you can see them.

Sue Thompson said: "With significant pressure on British farmers now, we want to support the farming community to show that safety on the farm doesn't need to be difficult or expensive. There are simple steps you can take today to help keep you and everyone on your farm safe.

"Farmers and farm workers should take a moment to think about what would happen to their families and their farms if they were seriously injured and unable to work.

"When people on farms start their daily routine, they should follow our safe farm, safe driver, safe vehicle advice to help plan the job and complete it safely."

## [Construction company and director fined after house partially collapses](#)

A construction company and its director have been fined for health and safety failings after a house partially collapsed in Manchester.

The Health and Safety Executive (HSE) visited the property on Caxton Road, Fallowfield, on 22 September 2020 after being informed an exterior wall had collapsed during construction work undertaken by Servotec Ltd.

Servotec was fined after failings after a house partially collapsed in Manchester

Following HSE's visit, a Prohibition Notice was issued to Servotec Limited after the roof on the property was found to be unstable with the company also failing to provide a temporary works design (TWD).

Additionally, HSE issued Improvement Notices to the company for the poor welfare on site and insufficient asbestos survey. HSE has just [launched a campaign](#) highlighting the dangers of asbestos and has guidance on the [safe working with asbestos](#).

HSE returned to the site on 25 September 2020 and a second Prohibition Notice was issued to Servotec after another structural problem was identified.

Servotec complied with all of the enforcement action issued.

Following this, HSE set out to investigate the initial cause of the partial building collapse, however the company and its director, Shaun Brae, were not forthcoming with the requested information over a number of months.

HSE made another visit to the house on 10 February 2021 when further health and safety breaches were found which included inadequate prevention of exposure to silica dust whilst cutting roof tiles. Servotec was then served with a Prohibition Notice and Improvement Notice.

The investigation by HSE found the company failed to comply with this final Improvement Notice and that significant risks across a multitude of areas were present at the site from start to finish, including structural safety, working at height and welfare. As Mr Brae was involved, directly served all Prohibition Notices and had demonstrated a persistent poor attitude and lack of accountability throughout HSE's interactions, he was also found to have failed to comply in his role as a director.

Servotec Limited, of Mauldeth Road West, Chorlton Cum Hardy, Manchester

pleaded guilty to breaching Section 2 (1), Section 3(1) and Section 33(1)(g) of the Health and Safety at Work etc. Act 1974. The company was fined £5,000 at Manchester Magistrates' Court on 10 March 2023.

Shaun Brae of Repton Avenue, Ashford, Kent, pleaded guilty to breaching Section 2 (1), Section 3(1) and Section 33(1)(g) of the Health and Safety at Work etc. Act 1974, by virtue of 37(1) of the Act. He was fined £1,000 and ordered to pay £2,000 in costs at Manchester Magistrates' Court on 10 March 2023.

HSE inspector Mike Lisle said: "This was a very serious incident, and it is fortunate nobody was injured as a result of the collapse or any of the subsequent failings.

"Where contractors demonstrate persistent poor health and safety and ignore Notices served, HSE will not hesitate to take necessary action.

"Directing minds playing a significant role in a Company's failings will also be held accountable as was the case here."

## [Company and its director prosecuted for unsafe removal of asbestos across Great Britain](#)

An asbestos removal company has been convicted and its director given a prison sentence after failing to ensure the safe removal of asbestos.

Asbestos Boss Limited, also known as Asbestos Team and its director, Daniel Luke Cockcroft, advertised as a licensed asbestos removal company and removed licensable material from domestic properties throughout Great Britain.

An investigation carried out by the Health and Safety Executive (HSE) found that Asbestos Boss Limited had never held a licence and their poor working practices resulted in the large scale spread of asbestos and exposure to homeowners and their families. Little to no precautions were taken by Asbestos Boss Limited and so their own workers, as well as anybody at the premises they were working on, were at serious risk of exposure to asbestos. The company and their director also breached a prohibition notice on several occasions.

HSE has just [launched a campaign](#) highlighting the dangers of asbestos and has guidance on the [safe working with asbestos](#).

At Manchester Magistrates' Court on 10 March, Asbestos Boss Limited of Old Gloucester Street, London was found guilty of breaching regulations 8(1) and 11(1)(a) of the Control of Asbestos Regulations 2012. They were also found guilty of one charge relating to the failure to comply with a prohibition notice at two separate addresses which prevented them from working with licensed asbestos materials. The company are awaiting sentence.

Company director Daniel Luke Cockcroft of Darnes Avenue, Halifax, pleaded guilty to breaching Section 37 of the Health and Safety at Work etc. Act 1974 in relation to the company's failing of regulation 8(1) and 11(1)(a) of the Control of Asbestos Regulations 2012 as well as the charge for breach of a prohibition notice. He was immediately imprisoned for 6 months and ordered to pay victim compensation.

HSE Inspector Matt Greenly said: "Asbestos is a killer. Companies and their directors need to recognise the dangers of removing asbestos by themselves both to their employees and others. Asbestos removal should only be carried out by trained personnel who understand the risks and how to control them.

"Asbestos Boss Limited have deliberately removed a highly dangerous material resulting in a significant risk of exposure to cancer causing asbestos. They not only have put their customers at risk but have also undoubtedly put themselves, their workers, and their families at serious risk.

"By undertaking asbestos removal work himself, Mr Cockcroft has also chanced his own life, and the life of his family by working unsafely with asbestos, despite knowing full well what the risks were.

"This case should serve as a warning to any other companies who think they can make a quick profit by cutting corners and risking lives. I also hope that potential customers will be able to avoid rogue companies like Asbestos Boss by carrying out simple checks to ensure that any company they employ is legitimate and competent to prevent them and their families being put at serious risk."

Asbestos Boss Limited and Mr Daniel Cockcroft, of Darnes Avenue, Pyenest, Halifax were also prosecuted by Stockport Trading Standards, in a jointly run case with HSE. Daniel Cockcroft and the company were both charged with fraud in relation to falsifying training certificates, a business insurance document and unauthorised use of trade association logos. This gave the impression that the business was credible and that workers were adequately trained and competent in relation to asbestos removal.

Daniel Cockcroft pleaded guilty to fraud and the company was also convicted. Daniel Cockcroft was sentenced to an additional 4 month in prison making a total prison term of 10 months. The company is awaiting sentence at an additional hearing

Councillor Helen Foster-Grime, Stockport Council's Cabinet Member for Communities and Housing, said: "Our Trading Standards team, work closely with other agencies and will do our utmost to ensure offenders like this, who carry out work with no regard for the safety of our residents, are brought to

justice.

“I am delighted that these criminals have been held to account. The message is very clear – we will not tolerate this in Stockport and will take robust action wherever possible.”

## [£30k fine for dental supply company after explosion of flammable liquid](#)

A dental supply company has been fined £30k after an explosion of flammable liquid led to a fire at its premises in Halifax.

John Winters & Company Limited pleaded guilty to safety breaches after one of its employees was put at serious risk in the explosion that led to flames ripping through the building.

Leeds Magistrates’ Court heard that, on 23<sup>rd</sup> April 2021, the worker had been decanting heptane from a metal drum into a plastic bulk container. Other employees were also put at risk when the explosion resulted in a fire spreading rapidly throughout other production buildings. Nobody was physically injured in the fire which was tackled by more than 60 firefighters at its height.

The explosion led to a

devastating fire

An investigation by the Health and Safety Executive (HSE) found that the decanting of flammables had been unsafely undertaken at the company for several years [despite well-known industry guidance](#).

The splash filling of Heptane generated a static charge creating a spark which caused an explosion during the decanting process, flammable material then spread further as there were no containment measures. The poor practice of storing cardboard boxes nearby fuelled the fire allowing it to spread significantly.

The fire spread quickly throughout the premises

John Winters & Company Limited of Washer Lane, Halifax, West Yorkshire pleaded guilty to breaching Section 2 (1) of the Health & Safety at Work etc Act 1974. The company has been fined £30,000 and ordered to pay £8,030.94 in costs.

After the hearing, HSE inspector Andrea Jones said: “Implementing appropriate control measures when handling flammable liquids is essential to prevent the generation of a static charge that can result in explosions and fires.

“The incident could so easily have been avoided by preventing splash filling, introducing appropriate earthing and bonding systems, training and supervision.

“HSE has well know guidance to help companies to understand what’s needed.”

The fire spread quickly following the explosion.
